UNITED STATES ENVIRONMENTAL PROTECTION AGENCY  
REGION V

DATE: Jan 21, 1997

SUBJECT: Review of Data  
Received for Review on December 23, 1996

FROM: Stephen L. Ostrodka, Chief (SRT-4J)  
Superfund Technical Support Section

TO: Data User: Superfund *Patricia Scott for Steve Ostrodka*  
01/21/97

has reviewed the data for the following case:

CLIENT NAME: HIMCO DUMP (IN)

USE NUMBER: 25143 SDG NUMBER: EAXX8

Number and Type of Samples: 8 - Waters

Sample Numbers: EAXX8 - 9, EAXY0 - 5

Laboratory: DATAHEM Hrs. for Review: 4.5 + 1.6

Following are our findings:

The data are acceptable and usable with the qualifications described in the attached narrative.

*Patricia Scott*

cc: Brian Freeman  
Region 5 TPO  
Mail Code: SM-5J

Case Number : 25143  
Site Name: HIMCO DUMP (IN)

SDG Number: EAXX8  
Laboratory: DATACHEM

Below is a summary of the out-of-control audits and the possible effects on the data for this case:

Eight (8) preserved water samples, numbered EAXX8, EAXX9 and EAXY0 through EAXY5, were collected on November 12, 1996 and November 13, 1996. The lab received the samples on November 15, 1996 in good condition. All eight (8) samples were analyzed for the full list of volatile organic analytes. Six (6) samples (EAXX9, EAXY0 through EAXY4) were analyzed for the full list of semivolatile organic analytes. All were analyzed according to CLP SOW OLM03.2 3/90.

Prepared By: A.C. Harvey/Lockheed-Martin ESAT  
Date: January 10, 1997

Case Number : 25143  
Sample Name: HIMCO DUMP (IN)

SDG Number: EAXX8  
Laboratory: DATACHEM

#### HOLDING TIME

No problems found for this qualification.

#### GC/MS TUNING AND GC INSTRUMENT PERFORMANCE

No problems found for this qualification.

#### CALIBRATION

The following volatile samples are associated with a continuing calibration percent difference (%D) outside primary criteria. Hits are qualified "J" and non-detects are qualified "UJ".

Acetone, 1,2-Dichloroethane, 2-Butanone, 4-Methyl-2-Pentanone, 2-Hexanone  
EAXX8, EAXX9, EAXY0, EAXY1, EAXY2, EAXY3, EAXY4,  
EAXY4MS, EAXY4MSD, EAXY5, VBLK01, VHBLK01

The following semivolatile samples are associated with a continuing calibration percent difference (%D) outside primary criteria. Hits are qualified "J" and non-detects are qualified "UJ".

Pentachlorophenol  
EAXX9, EAXY0, EAXY1, EAXY2, EAXY3, EAXY4,  
EAXY4MS, EAXY4MSD, SBLK01

#### BLANKS

The following volatile samples have analyte concentrations reported below the CRQL and less than or equal to ten times (10X) the associated method blank concentration. Reported sample concentrations have been elevated to the CRQL. Hits are qualified "U" and non-detects are not flagged.

Methylene Chloride  
EAXY2, EAXY3, EAXY4, EAXY4MS, EAXY4MSD, EAXY5,  
VHBLK01

The following semivolatile samples have analyte concentrations reported below the CRQL and less than or equal to ten times (10X) the associated method blank concentration. Reported sample concentrations have been elevated to the CRQL. Hits are qualified "U" and non-detects are not flagged.

Di-n-butylphthalate  
EAXX9, EAXY0, EAXY1, EAXY2, EAXY3, EAXY4,  
EAXY4MS, EAXY4MSD

Case Number : 25143  
Site Name: HIMCO DUMP (IN)

SDG Number: EAXX8  
Laboratory: DATACHEM

5. SYSTEM MONITORING COMPOUND AND SURROGATE RECOVERY

No problems found for this qualification.

6. MATRIX SPIKE/MATRIX SPIKE DUPLICATE

The following semivolatile matrix spike/matrix spike duplicate samples have percent recoveries which exceed the upper limit of the criteria window.

EAXY4MS  
4-Nitrophenol, Pentachlorophenol

EAXY4MSD  
4-Chloro-3-methylphenol, 4-Nitrophenol,  
2,4-Dinitrotoluene, Pentachlorophenol

The presence of 4-Chloro-3-methylphenol, 4-Nitrophenol, 2,4-Dinitrotoluene and Pentachlorophenol in the unspiked sample, EAXY4, is qualified "J" and non-detects are not flagged.

7. FIELD BLANK AND FIELD DUPLICATE

Sample EAXY3 was a field blank. Sample EAXY1 is a field duplicate of Sample EAXY0. Results are not qualified based upon the results of the field blank or field duplicates.

8. INTERNAL STANDARDS

No problems found for this qualification.

9. COMPOUND IDENTIFICATION

After reviewing the mass spectra and chromatograms it appears that all VOA, SVOA, and ~~Pesticide/PCB~~ compounds were properly identified.

10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

The following volatile samples have analyte concentrations below the quantitation limit (CRQL). All results below the CRQL are qualified "J".

EAXY2  
1,2-Dichloroethene (total)

EAXY4  
Benzene

EAXY5  
1,1-Dichloroethane, 1,2-Dichloroethene (total),  
1,2-Dichloropropane, Trichloroethene, Benzene

Prepared By: A.C. Harvey/Lockheed-Martin ESAT  
Date: January 10, 1997

*01/12/97*

se Number : 25143  
te Name: HIMCO DUMP (IN)

SDG Number: EAXX8  
Laboratory: DATACHEM

VBLK01  
Methylene Chloride

The following semivolatiles have analyte concentrations below the quantitation limit (CRQL). All results below the CRQL are qualified "J".

SBLK01  
Di-n-butylphthalate

. SYSTEM PERFORMANCE

GC/MS baseline indicated acceptable performance. ~~The GC baseline for the pesticide analysis was acceptable.~~ 1/5/97

. ADDITIONAL INFORMATION

None.

## CADRE Data Qualifier Sheet

| <u>Qualifiers</u> | <u>Data Qualifier Definitions</u>   |
|-------------------|---|
| U                 | The analyte was analyzed for, but was not detected above the reported sample quantitation limit.  |
| J                 | The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.   |
| UJ                | The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the action limit of quantitation necessary to accurately and precisely measure the analyte in the sample. |
| N                 | The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.   |
| NJ                | The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification and the associated numerical value represents its approximate concentration.   |
| R                 | The data are unusable. (The compound may or may not be present)   |
| H                 | Sample result is estimated and biased high.   |
| L                 | Sample result is estimated and biased low.  |

SDG Number: MEAKN2  
Laboratory: AATS

**Below is a summary of the out-of-control audits and the possible effects on the data for this case:**

Six low level water samples, MEAKN2-7 were collected on 11-13-96. The lab received the samples on 11-14-96 in good condition. All samples were analyzed for metals. All samples were analyzed using CLP SOW ILM04.0 analysis procedure.

Mercury analysis was performed using a Cold Vapor AA Technique. The remaining inorganic analyses were performed using an Inductively Coupled Plasma-Atomic Emission Spectrometric procedure.

1. HOLDING TIME:

HOLDING TIME CRITERIA

INORGANICS

|         | -- Holding Time -- |          | ----- pH ----- |          |
|---------|--------------------|----------|----------------|----------|
|         | Primary            | Expanded | Primary        | Expanded |
| Metals  | 180                | 0        | 2.0            | 0.0      |
| Mercury | 28                 | 0        | 2.0            | 0.0      |
| Cyanide | 14                 | 0        | 12.0           | 0.0      |

No problems were found for this qualification.

2. CALIBRATIONS:

CALIBRATION CRITERIA

INORGANICS

Percent Recovery Limits

|         | --- Primary --- |        | -- Expanded -- |        |
|---------|-----------------|--------|----------------|--------|
|         | Low             | High   | Low            | High   |
| Cyanide | 85.00           | 115.00 | 70.00          | 130.00 |
| As      | 90.00           | 110.00 | 75.00          | 125.00 |
| ICP     | 90.00           | 110.00 | 75.00          | 125.00 |
| Mercury | 80.00           | 120.00 | 65.00          | 135.00 |

No problems were found for this qualification.

3. BLANKS:

LABORATORY BLANKS CRITERIA

DC-284: The following inorganic samples are associated with a blank concentration which is greater than the instrument detection limit (IDL). The sample concentration is also greater than the IDL and less than five times the blank concentration. Hits are qualified "J" and non-detects are not flagged.

Zinc

MEAKN2, MEAKN3, MEAKN4, MEAKN5, MEAKN6, MEAKN7

**4. MATRIX SPIKE/MATRIX SPIKE DUPLICATE AND LAB CONTROL SAMPLE:**

MATRIX SPIKE CRITERIA  
-----

INORGANICS  
-----

Percent Recovery Limits  
-----

|               |       |
|---------------|-------|
| Upper         | 125.0 |
| Lower         | 75.0  |
| Extreme lower | 30.0  |

No problems were found for this qualification.

**5. LABORATORY AND FIELD DUPLICATE**

No problems were found for this qualification.

**6. ICP ANALYSIS**

DC-295: The following inorganic samples are associated with an ICP serial dilution percent difference which is not in criteria. The serial dilution result is greater than the sample result, indicating a potential negative interference. All samples are flagged "J".

Sodium

MEAKN2, MEAKN3, MEAKN4, MEAKN5, MEAKN6, MEAKN7

**7. GFAA ANALYSIS**

No GFAA analysis was performed for in this case.

**8. SAMPLE RESULTS**

All data, except those qualified above, are acceptable.

CADRE Data Qualifier Sheet

Qualifiers

Data Qualifier Definitions

- U            The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- J            The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
- UJ          The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the action limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
- R            The data are unusable. (The compound may or may not be present)

LAB.

Were ICP interelement corrections applied ? Yes/No YES

Were ICP background corrections applied ? Yes/No YES

If yes - were raw data generated before  
application of background corrections ? Yes/No NO\_

## Comments:

The serial dilution for sodium has a percent difference of 10.3 since this rounds down to 10, this does not need an "E" flag on the forms. This does however, appear on the textual defect report as needing an "E" flag.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on floppy diskette has been authorized by the Laboratory Manager or the manager's designee, as verified by the following signature.

Data Tracking Form for Contract Samples

Data Set No: \_\_\_\_\_ CERCLIS No: IN  
Case No: 25143 Site Name Location: Homed Dump  
Contractor or EPA Lab: AATS Data User: SF  
No. of Samples: 6 Date Sampled or Data Received: 12-17-96

Have Chain-of-Custody records been received? Yes  No   
Have traffic reports or packing lists been received? Yes  No   
If no, are traffic report or packing list numbers written on the chain-of-custody record? Yes  No   
If no, which traffic report or packing list numbers are missing?

\_\_\_\_\_  
\_\_\_\_\_

Are basic data forms in? Yes  No   
No of samples claimed: 6 No. of samples received: 6

**Data Quality Evaluation Report  
for  
1998 Supplemental Site Investigation**

## DATA QUALITY EVALUATION REPORT 1998 SUPPLEMENTAL SITE INVESTIGATION/RISK ASSESSMENT

### 1 General

This section presents a data usability assessment for the soil, ground water, and soil vapor field samples collected during the Supplemental Site Investigation conducted October 12 through December 14, 1998. The soil and ground water samples were analyzed for the Target Compound List Volatiles and Semivolatiles and the Target Analyte List (23 metals plus cyanide) using USEPA Contract Laboratory Program Organic and Inorganic Routine Analytical Services. The soil vapor samples were analyzed using SW846 Method 5041A/8260B. Quality control (QC) checks were performed routinely during data collection and analysis to verify that the data collected are of appropriate quality for the intended data use and that the data quality objectives were met. One hundred percent of the soil and ground water analytical data and approximately fifty percent of the soil vapor analytical data received a full data validation using the National Functional Guidelines for Organic and Inorganic Data Review - EPA 540/R-94/012 and /013.

### 2 Sample Collection Quality Control

#### 2.1 Field Duplicates

Field duplicates were collected at a rate of approximately 10% from all media sampled. For review purposes a limit of 50% Relative Percent Difference (RPD) was imposed on the data to evaluate the precision of sample collection. In general, precision was very good and only outliers are discussed below.

**Soil** - The duplicate pairs show excellent precision for the organic compounds and good precision for the inorganic analytes with the following exceptions. See Table 1-1 for all soil duplicate sample RPDs.

- Location SB06-0.5: The cobalt RPD is 53% and the cyanide RPD is 100%. The RPD for cyanide is calculated on the prime field sample cyanide result of 0.3 mg/kg while the duplicate is reported as less than 0.10 mg/kg.
- Location SB09-0.5: The calcium RPD is 152% and the magnesium RPD is 51%.
- Location SB10-0.5: All target analytes are below the fifty percent RPD except cyanide at 151%.
- Location SB16-6: The results from this location show consistency in the detections of polynuclear aromatic compounds between the prime sample and the duplicate with only two compounds slightly above the target RPD of fifty percent, benzo(b)fluoranthene and benzo(k)fluoranthene at 54% and 69% respectively. Although there are several inorganic analytes above the RPD

of fifty percent (aluminum at 59%, barium at 55%, calcium at 70%, manganese at 88%, sodium at 53% and cyanide at 66%), none are significant enough to impact data usability.

**Ground Water** - The ground water field duplicates demonstrate excellent precision. The relative percent difference between pairs is predominantly in the range of ten to twenty percent. The greatest difference calculated is the lead result for one pair at 34 percent. See Table 1-2 for all ground water duplicate sample RPDs.

**Soil Vapor** - The duplicate pairs show excellent precision with the following exceptions. See Table 1-3 for all soil vapor duplicate sample RPDs.

- Location TT-14: The 1,1 dichloroethane RPD is greater than 100% and m, p-xylene RPD is greater than 59%. Although these compounds have been correctly identified the concentration present must be considered estimated due to the variance between samples.
- Location TT-26: Carbon disulfide RPD is 69% and the tetrachloroethene RPD is 59%.
- Location TT-39: Toluene has an RPD of 107% and the carbon disulfide RPD is 53%. The concentrations of both compounds are near the reporting limits which may explain the variability.
- Location TT-46: Carbon disulfide has an RPD of 71% and the toluene RPD is 128%. These concentrations are also near their respective reporting limits which may explain the variability.

## 2.2 Equipment Blanks

Equipment blank samples were collected by pouring purchased deionized water over the decontaminated equipment and capturing the run-off. These blank samples were always collected just prior to using the equipment at the referenced location.

**Soil** - Equipment blanks were not collected in support of soil sampling.

**Ground Water** - During the three day ground water sample collection activities two equipment rinse blanks were collected on separate days. See Table 1-4 for a summary of compounds detected. No volatile or semivolatile organic compounds were detected in either blank with the exception of bis (2-ethylhexyl)phthalate (BEHP) in one sample. BEHP was not detected in the accompanying field sample. Both of the blanks also contained inorganic analytes at low concentrations as described below.

The equipment blank collected prior to well WT115A sampling contained cyanide at 12.0 µg/L J as compared to 12.4 µg/L J in the ground water sample from this location. Zinc was also detected in the blank at 11.2 µg/L J which is greater than the 3.7 µg/L J reported in ground water sample. The zinc and cyanide results from this location have been flagged "UB".

Antimony, calcium, iron, selenium, sodium, and zinc were reported in the equipment blank collected prior to well WT119A sampling. Except for an antimony concentration of 45.4 µg/L J in the blank, the impact to the sample data is negligible due to the low levels reported in the field sample. The antimony concentration in the sample is 43.2 µg/L J sample. This result has been qualified "UB" since the concentration is less than five times that of the blank

**Soil Vapor** - Two equipment rinse blanks and two field blanks were collected during the course of the field sampling effort to evaluate the potential for influence on the subsurface samples from sampling equipment and ambient air. See Table 1-5 for a summary of the compounds detected in the ambient air and equipment rinse blanks.

The field blanks were collected by drawing ambient air through a clean sorbent tube at approximately the same flow rate as the field sample collection. The air did not have contact with any sampling equipment as it was drawn into the sorbent tube. Benzene, toluene, ethyl benzene, xylenes (BTEX), styrene, and carbon tetrachloride were present in both field blanks at comparable concentrations which may indicate that there is a source of these volatiles on site not necessarily associated with the subsurface soil vapor. Methylene chloride, acetone, and carbon disulfide were also present in either the field blanks or the equipment rinse blanks. It is not clear, based on the available data, if these compounds are site related or sampling/laboratory contamination. However, the common occurrence of these specific compounds in environmental media due to laboratory contamination makes site related presence extremely suspect.

The equipment blanks were collected after the field blanks by drawing ambient air through a complete sample collection assembly. BTEX, styrene and carbon tetrachloride were reported in both equipment rinse blanks. This is probably due to the presence of these compounds in the ambient air rather than on the equipment. Tetrachloroethene was reported in both equipment rinse blanks, one ambient air blank and neither of the field samples collected immediately after these blanks. It is not clear what the source of this compound is. However, based on these results the ambient air cannot be eliminated. Vinyl chloride was detected in one equipment blank. The field sample collected prior to this blank contained an elevated concentration of vinyl chloride (>70 µg/m<sup>3</sup>). Despite thorough decontamination it may be possible that the steel rod retained some vinyl chloride. The field sample that was collected with the same equipment immediately after the blank was nondetect for vinyl chloride as were the ambient air and the trip blank.

## 2.3 Sample Handling and Preservation

### 2.3.1 Chain of Custody and Cooler Receipt

No sample custody or cooler receipt problems were noted for the soil, ground water, or soil vapor samples.

### 2.3.2 Trip Blanks

Trip blanks accompanied every ground water and soil vapor sample submitted for analysis. The ground water trip blanks were prepared by the lab from analyte free water and shipped to the site with the clean sample containers. These blanks were then included with each cooler that contained water samples for volatile analysis.

For the soil gas samples an unopened sorbent tube was placed in the cooler on site and kept with the samples from the time of collection through shipment until receipt by the laboratory. The trip blank results are summarized in Table 1-6

Only the blanks that demonstrated contamination or encountered analytical problems are discussed. All others were reported as not having detectable levels of the target compounds.

**Ground Water** - The trip blanks for sampling dates 19, 20, and 21 October 1998 were analyzed just outside of the allowable holding time for preserved water volatiles. No compounds were detected and the results have been qualified "UJ". The trip blank that accompanied the 22 October 1998 cooler is unusable. The blank was analyzed beyond an acceptable holding time and the results have been qualified as "R".

The impact to the data quality from the trip blanks is negligible since the field samples did not demonstrate the presence of target compounds except 1,1 dichloroethane at estimated values in two samples.

**Soil Vapor** - The trip blank associated with sample locations TT-15, TT-17, TT-18 and TT-19 contained 16 ng of carbon disulfide and 43 ng of benzene. Because of these positive results for the trip blank the detection of 59 ng carbon disulfide and 44 ng of benzene at TT-15 are suspect.

The trip blank associated with sample locations TT-26, TT-27, TT-28, TT-29, TT-30, and TT-31 contained 11 ng of carbon disulfide. Therefore the carbon disulfide detections of 32 ng at TT-29, 20 ng at TT-30 and 22 ng at TT-31 are suspect based on the results of the trip blank.

The trip blank associated with sample locations TT-16, TT-32, TT-33, and TT-34 contained carbon disulfide at 7.3 ng, benzene at 37 ng, toluene at 7.6 ng, tetrachloroethene at 22 ng, m,p-xylenes at 14 ng and ethylbenzene at 6.5 ng. Hence, the detections of tetrachloroethene at 36 ng in sample TT-32 and xylene at 51 ng in sample TT-16 are suspect based on the results of the trip blank.

The trip blank associated with sample locations TT-35, TT-36, TT-37, and TT-38 contained benzene at 46 ng, toluene at 17 ng, and m,p-xylene at 16 ng. The toluene detections in all four samples are suspect based on the results of the trip blank.

The results for these samples have been qualified nondetect based on the National Functional Guideline that less than 5x the blank is not considered site related. The other samples in these groups do not require qualification since they were either nondetect or contained significant levels of the compounds in question. The high levels, may in fact, have attributed to the contamination of the trip blanks and accompanying samples that demonstrate low concentrations.

### 2.3.3 Sample Preservation

All samples were shipped in coolers that contained sufficient ice to maintain an internal temperature of 4 degrees C.

**Water Samples for Metals and Cyanide Analysis** - The water samples were properly preserved with nitric acid for metals and sodium hydroxide for cyanide except as noted here. Samples for metals analysis from locations WT102A, WT112A, WT114A, and WT116A demonstrated a pH of three rather than less than two when checked by the laboratory. The detections for these samples have been qualified as estimated "J" and the nondetects have been qualified as "UJ".

**Water Samples for Volatile Analysis** - All water samples were properly preserved with hydrochloric acid to a pH of less than two.

### 2.3.4 Holding Times

Holding times were generally met for the extraction and/or analysis of all soil, ground water and soil vapor samples. Only the exceptions are noted here.

The semivolatile samples from monitoring wells WT101A and WT115A were re-extracted outside primary holding time. The results have been qualified as "UJ" and are biased low. This affects only a subset of the target list since the initial extraction results are usable except for those results qualified "R".

Several water volatile trip blanks were analyzed outside holding times as indicated in the trip blank discussion.

### **3 Laboratory Control**

#### **3.1 Method Control**

##### **3.1.1 Soil and Ground Water**

This section presents an overview of the data validation performed by US EPA-Region 5 contractors using the National Functional Guidelines for Inorganic and Organic Data Review. The data is generally usable except as noted here. Complete details can be found in the validation narratives provided in this appendix.

###### **3.1.1.1 Instrument Calibration**

**Volatiles** - Numerous instances of continuing calibration whose corresponding initial calibration has percent relative standard deviations outside primary criteria and continuing calibration with percent difference outside criteria are noted. The detections have been qualified "J" and the nondetections qualified as "UJ".

**Semivolatiles** - Numerous instances of continuing calibration whose corresponding initial calibration has percent relative standard deviations outside primary criteria and continuing calibration with percent difference outside criteria are noted. The detections have been qualified "J" and the nondetections qualified as "UJ".

**Metals** - No problems are noted.

###### **3.1.1.2 Laboratory Control Samples**

No problems are noted.

###### **3.1.1.3 Method Blanks**

**Volatiles** - Where methylene chloride, acetone and 2-butanone are detected in the method blank, the accompanying samples are qualified "U" if the sample result is less than ten times the blank concentration.

**Semivolatiles** - Where pyrene is detected in the method blank the accompanying sample is qualified

“U” if the sample result is less than five times the blank concentration.

Where bis(2-ethylhexyl)phthalate is detected in the method blank the accompanying samples are qualified “U” if the sample results are less than ten times the blank concentration.

**Metals** - No serious blank problems were noted. Where calibration or preparation blanks contain low concentrations of analytes above the instrument detection limit the sample results are qualified “J” for the detections. No qualification is necessary for the nondetections.

#### **3.1.1.4 Laboratory Duplicates**

No problems are noted

#### **3.1.2 Soil Vapor**

This section presents an overview of the data validation performed by US EPA-Region 5 contractors using the National Functional Guidelines for Organic Data Review. The data is usable as noted here. Complete details can be found in the validation narratives provided in this appendix.

##### **3.1.2.1 Instrument Calibration**

No problems were noted.

##### **3.1.2.2 Laboratory Control Samples**

No problems were noted.

##### **3.1.2.3 Method Blanks**

Bromomethane was the only compound detected in any of the method blanks. The only impact is to sample 7704 from location TT-42. The bromomethane detected at 14 ng is qualified “U”.

#### **3.2 Sample Control**

##### **3.2.1 Surrogate and Internal Standard Recoveries**

###### **3.2.1.1 Soil and Ground Water**

**Volatiles** - There are a few instances of poor internal standard and surrogate standard recovery. Sample ECMN7 detections are qualified “J” and nondetections are qualified “UJ” except in the case

of a few compounds whose recoveries are outside expanded acceptable limits. These nondetections are unusable and are qualified "R".

**Semivolatiles** - There are a few instances of poor internal standard and surrogate recovery. Multiple compounds in the samples ECMQ2, ECMQ2RE, ECMM5 are qualified "J" for detections, "UJ" for nondetections except in the case of a few compounds whose recoveries are outside expanded acceptable limits. These nondetections are unusable and are qualified "R".

### 3.2.1.2 Soil Vapor

The recovery of 4-bromofluorobenzene in the sample from TT-28 was above the upper QC limit. The positive results for this sample should be considered estimated.

The recovery of 1,2,-dichloroethane-d4 in samples from TT-36, TT-37, and TT-38 exceed the upper QC limit. The positive results for these samples should be considered estimated. The recovery of 4-Bromofluorobenzene in the sample from TT-37 exceeds the upper QC limit. Since the positive results from this location are already qualified, no additional qualification is necessary.

### 3.2.2 Matrix Spike/Matrix Spike Duplicates

Matrix Spikes and Spike Duplicates are not applicable to the sorbent cartridges used to collect the soil vapor samples. The following discussion applies to soil and ground water samples only.

**Volatiles** - No problems are noted.

**Semivolatiles** - Where the relative percent difference between the matrix spike and spike duplicate compounds are outside criteria the samples are qualified "J".

**Metals** - Where the matrix spike recoveries are low the samples are qualified "J" for the detections and "UJ" for those analytes not detected except for the selenium results for samples collected from WT101A, WT101A Dup, WT115A, and WT116A. The selenium spike recovery for these samples was extremely low, at 26%, giving unusable results. The data has been qualified "R".

### 3.2.3 Method of Standard Additions (MSA) Analyses (Inorganic)

Several soil sample arsenic and lead results and two water lead results are qualified "J" because incorrect spike amounts were used.

### 3.2.4 Additional Soil Vapor Analysis Information

**Concentrations That Exceed The Calibration Range** - The following samples contain target analytes at concentrations that exceed the calibration range. The collection and analysis method does not provide for reanalysis of these samples. All applicable results have been qualified "E".

- The value for tetrachloroethene in samples from locations TT-29, TT-39 & Duplicate, and TT-22 are qualified "E".
- The values for tetrachloroethene and trichloroethene in samples from locations TT-40 and TT-26 are qualified "E".
- The value for vinyl chloride in the sample from location TT-26 is qualified "E".
- The value for trichloroethane in the sample from location TT-45 is qualified "E".

### 3.2.5 Compound Identification

1,2-Dichloroethane should not have been reported for the sample from TT-32 because the submitted mass spectrum indicates a cycloalkane. The value has been qualified "U".

## 4 Conclusions

### 4.1 Data Adequacy

The data met the data quality objectives for precision, accuracy, representativeness, comparability and completeness and is adequate for its intended use except for sensitivity. Review of the sample handling and analysis shows that the sample quality has not been negatively impacted by field or lab procedures. Qualifiers have been applied to the results to convey limitations of the analytical results. The qualifiers used are defined in Table 3-4. There are a few instances where data is unusable and those are qualified as rejected "R".

### 4.2 Restrictions on Data Use

The only notable data restriction observed for the soil and ground water data is that the Contract Laboratory Program contract required quantitation limits used for this work exceed the risk based screening levels for many compounds. Because of this restriction, the presence or absence of these compounds above the screening criteria cannot be definitively determined.

More sensitive methods are readily available and are recommended for any future sampling and analysis. The data quality objective process will ensure the chemical data meets the project needs.

**Quality Control Summary Tables  
1998 Supplemental Site Investigation**

No volatile compounds detected.

NC: Not calculated because one of the samples from the duplicate pair was nondetect while the compound was detected in the duplicate.

Shading indicates an RPD of greater than 50%.

| bis(2-Ethylhexyl)phthalate                                | 10 U   | 3 J  |

Shading indicates the constituent was detected.

No volatile compounds were detected.

No semivolatile compounds were detected with the exception of bis (2-ethylhexyl)phthalate.

DATE: 11-23-98

SUBJECT: Review of Data  
Received for Review on Nov 9, 1998

FROM: Stephen L. Ostrodka, Chief (HSRL-5J)  
Superfund Technical Support Section / LF

TO: Data User: USACE

We have reviewed the data for the following case:

SITE NAME: Himesco Dump (IN)

CASE NUMBER: 26593 SDG NUMBER: MEBQHO

Number and Type of Samples: 8 (Water/soil) metals

Sample Numbers: MEBQHO-2, 6-7 MEBQJ3-5

Laboratory: SVL Hrs. for Review: 8 hrs.

Following are our findings:

+1

All data are usable with the qualifications described in the attached narrative.

L. FINKELBERG

11-23-98

CC: Cecilia Moore  
Region 5 TPO  
Mail Code: SM-5J

Case Number: 26593  
Site Name: Himco Dump

SDG Number: MEBQH0  
Laboratory: SVL

Below is a summary of the out-of-control audits and the possible effects on the data for this case:

3 low-level water and 5 low-level soil samples, numbered MEBQJ3-5, MEBQH0-2,6-7, the soil samples were collected on 10/21/98 and the water samples on 10/22/98. The lab received the soil samples on 10/22/98 and the water on 10/23/98 in good condition. All samples were analyzed for metals. All samples were analyzed using CLP SOW ILM04.0 analysis procedure.

Mercury analysis was performed using a Cold Vapor AA Technique. The remaining inorganic analyses were performed using an Inductively Coupled Plasma-Atomic Emission Spectrometric procedure.

HOLDING TIME:

HOLDING TIME CRITERIA

Inorganic

|         | -- Holding Time -- |          | ----- pH ----- |          |
|---------|--------------------|----------|----------------|----------|
|         | Primary            | Expanded | Primary        | Expanded |
| Metals  | 180                | 0        | 2.0            | 0.0      |
| Mercury | 28                 | 0        | 2.0            | 0.0      |
| Cyanide | 14                 | 0        | 12.0           | 0.0      |

DC-280: The following inorganic soil samples were reviewed for holding time violations using criteria developed for water samples.

MEBQH0, MEBQH1, MEBQH2, MEBQH6, MEBQH7

2. CALIBRATIONS:

CALIBRATION CRITERIA

Inorganic

Percent Recovery Limits

|         | --- Primary --- |        | -- Expanded -- |        |
|---------|-----------------|--------|----------------|--------|
|         | Low             | High   | Low            | High   |
| ICP     | 90.00           | 110.00 | 75.00          | 125.00 |
| Mercury | 80.00           | 120.00 | 65.00          | 135.00 |

No problems were found for this qualification.

3. BLANKS:

LABORATORY BLANKS CRITERIA  
-----

DC-283: The following inorganic samples are associated with a blank analyte with negative concentration whose absolute value is greater than the instrument detection limit (IDL). The sample concentration is also greater than the IDL and less than five times the absolute value of the blank. Hits are flagged "J". Some non-detect reading are sufficiently high that the detection limit may be elevated. These non-detect are flagged "UJ".

Zinc

MEBQJ3, MEBQJ4, MEBQJ5

Cyanide

MEBQJ5

DC-284: Sample MEBQJ5 is a field blank. The following inorganic samples are associated with a calibration, preparation, or field blank concentration which is greater than the instrument detection limit (IDL). The sample concentration is also greater than the IDL and less than five times the blank concentration. Hits are qualified "J"; non-detects are acceptable.

Aluminum

MEBQJ3, MEBQJ4

Antimony

MEBQJ3, MEBQJ5, MEBQH1, MEBQH6

Cyanide

MEBQH0, MEBQH2, MEBQH6, MEBQJ3

DC-338: During review of the following inorganic samples, the reported IDL/default CRDL value was used for cyanide.

MEBQH0, MEBQH1, MEBQH2, MEBQH6, MEBQH7, MEBQJ3, MEBQJ4, MEBQJ5

4. MATRIX SPIKE/MATRIX SPIKE DUPLICATE AND LAB CONTROL SAMPLE:

MATRIX SPIKE CRITERIA

-----

Inorganic

-----

Percent Recovery Limits

-----

|               |       |
|---------------|-------|
| Upper         | 125.0 |
| Lower         | 75.0  |
| Extreme lower | 30.0  |

DC-268: The following inorganic samples are associated with a matrix spike recovery which is low (30-74 %) indicating that sample results may be biased low.

Hits are qualified "J" and non-detects are qualified "UJ".

Antimony

MEBQH0, MEBQH1, MEBQH2, MEBQH6, MEBQH7

Arsenic

MEBQH0, MEBQH1, MEBQH2, MEBQH6, MEBQH7

Selenium

MEBQJ3, MEBQJ4, MEBQJ5

No problems were found for the lab control sample.

Site Name: Himco Dump

SDG Number: MEBQH0  
Laboratory: SVL

No problems were found for the lab control sample.

5. LABORATORY AND FIELD DUPLICATE

Samples MEBQJ3 and MEBQJ4 are field duplicates with good correlation.

5. ICP ANALYSIS

No problems were found for this qualification.

7. GFAA ANALYSIS

No problems were found for this qualification.

8. SAMPLE RESULTS

All data, except those qualified above, are acceptable.

CADRE Data Qualifier Sheet

Qualifiers

Data Qualifier Definitions

- U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- J The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
- UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the action limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
- R The data are unusable. (The compound may or may not be present)

## DATA QUALIFIER DEFINITIONS

For the purpose of defining the flagging nomenclature utilized in this document, the following code letters and associated definitions are provide:

- U Indicates the material was analyzed, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.
- J Indicates the associated value is an estimated quantity.
- R Indicates the data are unusable. (Note: The analyte may or may not be present.)
- UJ Indicates the material was analyzed for, but was not detected. The associated value is an estimate and may be inaccurate or imprecise.
- E Indicates the reported value is estimated because of the presence of interferences. An explanatory note shall be included under Comments on the Cover Page (if the problem applies to all samples) or on the specific FORM I-IN (if it is an isolated problem).
- M Indicates duplicate injection precision is not met.
- N Indicates the spike sample recovery is not within control limits.
- S Indicates the reported value was determined by the Method of Standard Addition (MSA).
- W Indicates the post-digestion spike for furnace AA analysis is out of control limits (85%-115%), while sample absorbance is less than 50% of the spike absorbance.
- + Indicates the correlation coefficient for the MSA is less than 0.995.
- \* Indicates the duplicate analysis is not within control limits.

Note: Entering "S", "W" or "+" is mutually exclusive. No combination of these qualifiers can appear in the same field for an analyte.

DATE: 02-04-99  
SUBJECT: Review of Data  
Received for Review on Jan. 28, 1999  
FROM: Stephen L. Ostrodka, Chief (HSRL-5J)  
Superfund Technical Support Section /LF.  
TO: Data User: US Army Corp. of Eng.

We have reviewed the data for the following case:

SITE NAME: Himco Dump (IN)  
CASE NUMBER: 26593 SDG NUMBER: MEBQF5  
Number and Type of Samples: 20 water and soil samples  
Sample Numbers: MEBQF1-3, 5-9, MEBQGO-3, 7-9, MEBQH3-5, MEBQT  
Laboratory: SVL Hrs. for Review: 16  
+1

Following are our findings:

All water Se data are unusable because Se spike recovery was extremely low (<30%).  
All other data are usable with the qualifications described in the attached narrative.

Case: 26593  
Site: Himco Dump

SDG: MEBQF5  
Laboratory: SVL

The laboratory's portion of this case contains 5 low-level water samples and 15 low-level soil samples analyzed for total metals and total cyanide. The following narrative lists the out-of-control audits and their possible effect on the sample results.

**Evidential Audit:** All forms and most of the raw data documents are originals. One of the chain-of-custody sheets is a copy; the original may be found with SDG MEBQH0. The custody seals and one of the airbills are copies; the original documents may be found with SDG MEBHQ0. GFAA, Hg, and CN real-time raw data was not submitted for review with this case; instead, run summary reports were included for these parameters. The original DC-1 form, sample tags, airbill, and chain-of-custody documents are present in the case. All documents are in the order as specified on the inventory sheet (form DC-2).

#### **Waters (MEBQF1-3, MEBQJ1, MEBQJ2)**

**ICP analyses:** The calibration blank contained Ca (28.9 ug/l), and Ca on MEBQJ1 is estimated (J) due to contamination.

The spike recovery for Fe (165.5%) is greater than the 125% upper limit; however, the sample concentration was greater than 4 times the spike, thus invalidating the spike as a QC audit. The calibration blank contained Fe (24.3 ug/l), and Fe on MEBQJ1 is estimated (J) due to contamination.

The calibration blank also contained Zn (4.8 ug/l). Zn on MEBQF3 and MEBQJ1 are estimated (J) due to contamination.

**GFAA Analyses:** The 60.3% As spike recovery indicates a low bias, and As on MEBQF1, MEBQF2, and MEBQJ2 are estimated (J). These three As results were flagged "W" and are also affected by interference. As on MEBQF3 and MEBQJ1 are estimated (UJ) due to a possible elevated detection limit.

The 26.0% Se spike recovery indicates a low bias, and all Se data are unusable (R). Se on MEBQF1-3 and MEBQJ2 were flagged "W" and are also affected by interference.

**Other Qualifiers:** A negative concentration reading was obtained for the CN calibration blank (-5.965 ug/l). CN on MEBQF1-3 and MEBQJ1 are estimated (J) due to a low bias.

*this is not a  
Dup but a rinse*

Samples MEBQF1 and MEBQF2 are field duplicates and show good correlation. Samples MEBQF3 and MEBQJ1 are field duplicates, and the duplicate differences were greater than the CRDLs for Ca, Fe, Mg, Mn, and Na. This indicates poor precision, and all Mg, Mn, and Na data are estimated (J). Ca and Fe on MEBQJ1 are also affected but are qualified above. All other Ca and Fe data are estimated (J) due to poor precision.

Sample MEBQJ2 was not sufficiently preserved for metals, indicating a low bias. The Al, Ba, and K results for this sample are estimated (J). The Sb, Be, Cd, Cr, Co, Cu, Pb, Hg, Ni, Ag, Tl, V, and Zn results are estimated (UJ) due to possibly elevated detection limits. The As, Ca, Fe, Mg, Mn, Se, and Na results are also affected but are qualified above.

### Soils (MEBQF5-9; MEBQG0-3, 7-9; MEBQH3-5)

**ICP Analyses:** The duplicate RPDs for Be (61.8%), Ca (42.3%), and Mg (36.7%) are greater than the 35% control limit; however, the duplicate differences are less than 2 times the CRDLs, and all Be, Ca, and Mg data are acceptable.

The calibration blank contained Co (8.6 ug/l) and Na (98.2 ug/l) indicating contamination, and the following results are estimated (J): all Na data and all Co results except for that on MEBQG0.

**GFAA Analyses:** The 62.1% As spike recovery indicates a low bias, and all As data are estimated (J). All As results except that on MEBQH4 were flagged "W" and are also affected by interference.

The calibration blank contained Pb (4.0 ug/l) indicating contamination. Pb on MEBQF6-9, MEBQG1-3, MEBQG7, and MEBQG9 are estimated (J).

Se on MEBQG1, MEBQH4, and MEBQH5 were flagged "W" and are estimated (UJ) due to interference.

**Other Qualifiers:** The calibration blank contained Hg (0.1 ug/l), and the following Hg results are estimated (J) due to contamination: MEBQF5, MEBQF8, MEBQG1-3, and MEBQH4.

The duplicate RPD for CN (200%) is greater than the 35% control limit; however, the duplicate difference is less than 2 times the CRDLs, and CN data are not qualified on this basis. The

## DATA QUALIFIER DEFINITIONS

For the purpose of defining the flagging nomenclature utilized in this document, the following code letters and associated definitions are provide:

- U Indicates the material was analyzed, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.
- J Indicates the associated value is an estimated quantity.
- R Indicates the data are unusable. (Note: The analyte may or may not be present.)
- UJ Indicates the material was analyzed for, but was not detected. The associated value is an estimate and may be inaccurate or imprecise.
- E Indicates the reported value is estimated because of the presence of interferences. An explanatory note shall be included under Comments on the Cover Page (if the problem applies to all samples) or on the specific FORM I-IN (if it is an isolated problem).
- M Indicates duplicate injection precision is not met.
- N Indicates the spike sample recovery is not within control limits.
- S Indicates the reported value was determined by the Method of Standard Addition (MSA).
- W Indicates the post-digestion spike for furnace AA analysis is out of control limits (85%-115%), while sample absorbance is less than 50% of the spike absorbance.
- + Indicates the correlation coefficient for the MSA is less than 0.995.
- \* Indicates the duplicate analysis is not within control limits.

Note: Entering "S", "W" or "+" is mutually exclusive. No combination of these qualifiers can appear in the same field for an analyte.

SILVER

\*\*\*\*\*CASE NARRATIVE

CASE: 26593  
SDG: MEBQF5

SILVER RECEIVED SOIL AND WATER SAMPLES FOR METALS AND CYANIDE.

COOLER TEMPERATURES:

|                 |              |    |
|-----------------|--------------|----|
| AIRBILL NUMBER: | 1172422112   | 4° |
| AIRBILL NUMBER: | 1172422101   | 3° |
| AIRBILL NUMBER: | 809200471671 | 4° |
| AIRBILL NUMBER: | 809200471660 | 5° |

pH ON HNO3 PRESERVED BOTTLE FOR SAMPLE MEBQJ2 WAS 4.  
PER CHARLES HUTCHINSON, SILVER PROCEEDED WITH ANALYSIS (REFERENCE TELEPHONE LOG).

SILVER REDIGESTED THE SOIL SAMPLES FOR ICP AS THE QC CRITERION FAILED.

DISK TO DYNACORP AND REGION 5.

Comments:

Several water volatile trip blanks were analyzed outside holding times as indicated in the trip blank discussion.

### **3 Laboratory Control**

#### **3.1 Method Control**

##### **3.1.1 Soil and Ground Water**

This section presents an overview of the data validation performed by US EPA-Region 5 contractors using the National Functional Guidelines for Inorganic and Organic Data Review. The data is generally usable except as noted here. Complete details can be found in the validation narratives provided in this appendix.

###### **3.1.1.1 Instrument Calibration**

**Volatiles** - Numerous instances of continuing calibration whose corresponding initial calibration has percent relative standard deviations outside primary criteria and continuing calibration with percent difference outside criteria are noted. The detections have been qualified "J" and the nondetections qualified as "UJ".

**Semivolatiles** - Numerous instances of continuing calibration whose corresponding initial calibration has percent relative standard deviations outside primary criteria and continuing calibration with percent difference outside criteria are noted. The detections have been qualified "J" and the nondetections qualified as "UJ".

**Metals** - No problems are noted.

###### **3.1.1.2 Laboratory Control Samples**

No problems are noted.

###### **3.1.1.3 Method Blanks**

**Volatiles** - Where methylene chloride, acetone and 2-butanone are detected in the method blank, the accompanying samples are qualified "U" if the sample result is less than ten times the blank concentration.

**Semivolatiles** - Where pyrene is detected in the method blank the accompanying sample is qualified "U" if the sample result is less than five times the blank concentration.

of fifty percent (aluminum at 59%, barium at 55%, calcium at 70%, manganese at 88%, sodium at 53% and cyanide at 66%), none are significant enough to impact data usability.

**Ground Water** - The ground water field duplicates demonstrate excellent precision. The relative percent difference between pairs is predominantly in the range of ten to twenty percent. The greatest difference calculated is the lead result for one pair at 34 percent. See Table 1-2 for all ground water duplicate sample RPDs.

**Soil Vapor** - The duplicate pairs show excellent precision with the following exceptions. See Table 1-3 for all soil vapor duplicate sample RPDs.

- Location TT-14: The 1,1 dichloroethane RPD is greater than 100% and m, p-xylene RPD is greater than 59%. Although these compounds have been correctly identified the concentration present must be considered estimated due to the variance between samples.
- Location TT-26: Carbon disulfide RPD is 69% and the tetrachloroethene RPD is 59%.
- Location TT-39: Toluene has an RPD of 107% and the carbon disulfide RPD is 53%. The concentrations of both compounds are near the reporting limits which may explain the variability.
- Location TT-46: Carbon disulfide has an RPD of 71% and the toluene RPD is 128%. These concentrations are also near their respective reporting limits which may explain the variability.

## 2.2 Equipment Blanks

Equipment blank samples were collected by pouring purchased deionized water over the decontaminated equipment and capturing the run-off. These blank samples were always collected just prior to using the equipment at the referenced location.

**Soil** - Equipment blanks were not collected in support of soil sampling.

**Ground Water** - During the three day ground water sample collection activities two equipment rinse blanks were collected on separate days. See Table 1-4 for a summary of compounds detected. No volatile or semivolatile organic compounds were detected in either blank with the exception of bis (2-ethylhexyl)phthalate (BEHP) in one sample. BEHP was not detected in the accompanying field sample. Both of the blanks also contained inorganic analytes at low concentrations as described below.

SUBJECT: Review of Data  
Received for Review on November 10, 1998

FROM: Stephen L. Ostrodka, Chief (SRT-4J) *for Steve Ostrodka*  
Superfund Technical Support Section *Richard L. Bognik*  
*12/4/98*

TO: Data User: USACE

We have reviewed the data for the following case:

Site name: Himco Dump (IN)

Case number: 26593 SDG Number: ECMM8

Number and Type of Samples: 9 soil samples

Sample Numbers: ECMM8-ECMM9, ECMN5, ECMN8-ECMN9, ECMP0-ECMP2

Laboratory: IEA Hrs. for Review: hrs + 0.5

Following are our findings:

*The data are acceptable and usable with the qualifications described in the attached narrative.*  
*Richard L. Bognik*

CC: Cecilia Moore  
Region 5 TPO  
Mail Code: SM-5J

Case Number : 26593  
Site Name: Himco Dump (IN)

SDG Number: ECMM8  
Laboratory: IEA

**Below is a summary of the out-of-control audits and the possible effects on the data for this case:**

Nine soil samples (ECMM8-ECMM9, ECMN5, ECMN8-ECMN9, ECMP0-ECMP2) were collected on 10/20/98. The lab received the samples on 10/21/98 in good condition. All samples were analyzed for the list of VOA and SVOA analytes. All samples were analyzed according to CLP SOW OLMO3.2 3/90.

Prepared By: Steffanie Tobin (Lockheed/ESAT)  
Date: December 1, 1998

Case Number : 26593  
Site Name: Himco Dump (IN)

SDG Number: ECMM8  
Laboratory: IEA

### 1. HOLDING TIME

No problems were found for this qualification.

### 2. GC/MS TUNING AND GC INSTRUMENT PERFORMANCE

No problems were found for this qualification.

### 3. CALIBRATION

The following volatile samples are associated with a continuing calibration whose corresponding initial calibration has percent relative standard deviation (%RSD) outside primary criteria. Hits are qualified "J" and non-detects are qualified "UJ".

Bromomethane, 2-Butanone  
VBLKE7, VHBLKE2

Chloroethane  
ECMM8, ECMM9, ECMN5, ECMN6, ECMN8, ECMN9  
ECMP0, ECMP0MS, ECMP0MSD, ECMP1, ECMP2, VBLKE3  
VBLKE4

The following volatile samples are associated with a continuing calibration percent difference (%D) outside primary criteria. Hits are qualified "J" and non-detects are qualified "UJ".

Chloromethane, Tetrachloroethene  
ECMM8, ECMM9, ECMN5, ECMN6, ECMN8, ECMN9, ECMP0, ECMP0MS, ECMP0MSD,  
ECMP1, ECMP2, VBLKE3, VBLKE4

Bromoform  
ECMM8, ECMM9, ECMN5, ECMN6, ECMN8, ECMP0, ECMP0MS, ECMP0MSD,  
ECMP1, ECMP2, VBLKE3

1,1,2,2-Tetrachloroethane  
VBLKE7, VHBLKE2

The following semivolatile samples are associated with a continuing calibration percent difference (%D) outside primary criteria. Hits are qualified "J" and non-detects are qualified "UJ".

4-Chloroaniline, Hexachlorobutadiene  
ECMN5DL, ECMN6DL, ECMP1, ECMP2

Case Number : 26593  
Site Name: Himco Dump (IN)

SDG Number: ECMM8  
Laboratory: IEA

#### 4. METHOD BLANKS

No problems were found for this qualification.

#### 5. SYSTEM MONITORING COMPOUND AND SURROGATE RECOVERY

The following semivolatile samples have one surrogate recovery which below the criteria window. Hits and non-detects are not flagged since the protocol allow at least one surrogate to be out of control before a reanalysis or qualification is required.

ECMP0MS

#### 6. MATRIX SPIKE/MATRIX SPIKE DUPLICATE

No problems were found for this qualification.

#### 7. FIELD BLANK AND FIELD DUPLICATE

None of the samples in this data set are field blanks or field duplicates.

#### 8. INTERNAL STANDARDS

No problems were found for this qualification.

#### 9. COMPOUND IDENTIFICATION

After reviewing the mass spectra and chromatograms, it appears that all VOA, SVOA, and Pesticide/PCB compounds were properly identified.

#### 10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

The following semivolatile samples have analyte concentrations below the quantitation limit (CRQL). All results below the CRQL are qualified "J".

ECMN5  
Pyrene

ECMN6  
Naphthalene, Fluoranthene, Pyrene, Benzo(b)fluoranthene, Benzo(g,h,i)perylene

ECMN8  
bis(2-Ethylhexyl)phthalate

Prepared By: Steffanie Tobin (Lockheed/ESAT)

Date: December 1, 1998

Case Number : 26593  
Site Name: Himco Dump (IN)

SDG Number: ECMM8  
Laboratory: IEA

ECMN9  
Fluoranthene, Pyrene, Benzo(b)fluoranthene

ECMP1  
bis(2-Ethylhexyl)phthalate

## 11. SYSTEM PERFORMANCE

GC/MS baseline indicated acceptable performance.

## 12. ADDITIONAL INFORMATION

Below is the summary of the pH for the samples of this dataset:

| Sample ID | pH  |
|-----------|-----|
| ECMM8     | 6.6 |
| ECMM9     | 7.5 |
| ECMN5     | 6.8 |
| ECMN6     | 6.8 |
| ECMN8     | 9.6 |
| ECMN9     | 7.7 |
| ECMP0     | 6.3 |
| ECMP1     | 6.5 |
| ECMP2     | 6.9 |

No flags were reported for the SVOA TIC results. Please, refer to Form I SVOA for the final flags of the SVOA TIC results.

## CADRE Data Qualifier Sheet

### Qualifiers

### Data Qualifier Definitions

- U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- J The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
- UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the action limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
- N The analysis indicates the present of an analyte for which there is presumptive evidence to make a tentative identification.
- NJ The analysis indicates the present of an analyte for which there is presumptive evidence to make a tentative identification and the associated numerical value represents its approximate concentration.
- R The data are unusable. (The compound may or may not be present)
- H Sample result is estimated and biased high.
- L Sample result is estimated and biased low.

SUBJECT: Review of Data  
Received for Review on November 3, 1998

FROM: Stephen L. Ostrodka, Chief (SRT-4J) /LF.  
Superfund Technical Support Section

TO: Data User: USACE

We have reviewed the data by CADRE for the following case:

SITE NAME: Himco Dump

CASE NUMBER: 26593 SDG NUMBER: MEBOD5

Number and Type of Samples: 3 water, 17 soil *metals*

Sample Numbers: MEBOD5-9; MEBQEO-9; MEBQFO,4; MEBQO4-6

Laboratory: SVL Hrs. for Review: 19

Following are our findings: *+1*

*All data are usable with the qualifications described in the attached narrative.*

*L. Finkelberg

Case Number : 26593  
Site Name: Himco Dump

Page 2 of 8  
SDG Number: MEBQD5  
Laboratory: SVL

Below is a summary of the out-of-control audits and the possible effects on the data for this case:

3 water samples (numbered MEBQE8, MEBQE9, and MEBQF0) and 17 soil samples (numbered MEBQD5-9, MEBQ0-7, MEBQF4, and MEBQG4-6) were collected on October 19 and 20, 1998. The lab received the samples on October 20 and 21, 1998. The metals aliquots for the water samples were insufficiently preserved to a pH of 3. All samples were analyzed for metals and cyanide. All samples were analyzed using CLP SOW ILM04.0 analysis procedures.

Mercury analysis was performed using a Cold Vapor AA Technique. Cyanide analysis was performed using the MIDI Distillation procedure. The remaining inorganic analyses were performed using an Inductively Coupled Plasma-Atomic Emission Spectrometric procedure.

1. HOLDING TIME:

HOLDING TIME CRITERIA  
-----

Inorganic  
-----

|         | -- Holding Time -- |          | ----- pH ----- |          |
|---------|--------------------|----------|----------------|----------|
|         | Primary            | Expanded | Primary        | Expanded |
| Metals  | 180                | 0        | 2.0            | 0.0      |
| Mercury | 28                 | 0        | 2.0            | 0.0      |
| Cyanide | 14                 | 0        | 12.0           | 0.0      |

DC-280: The following inorganic soil samples were reviewed for holding time violations using criteria developed for water samples.

MEBQD5, MEBQD6, MEBQD7, MEBQD8, MEBQD9, MEBQE0  
MEBQE1, MEBQE2, MEBQE3, MEBQE4  
MEBQE5, MEBQE6, MEBQE7, MEBQF4, MEBQG4, MEBQG5  
MEBQG6

The following results are associated with samples that were improperly preserved.

Hits are qualified "J"; non-detects are qualified "UJ".

MEBQE8

Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium  
Calcium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium  
Manganese, Mercury, Nickel, Potassium, Selenium, Silver, Sodiur  
Thallium, Vanadium, Zinc

MEBQE9

Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium  
Calcium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium  
Manganese, Mercury, Nickel, Potassium, Selenium, Silver, Sodiur  
Thallium, Vanadium, Zinc

MEBQFO

Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium  
Calcium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium  
Manganese, Mercury, Nickel, Potassium, Selenium, Silver, Sodiur  
Thallium, Vanadium, Zinc

|-------------------|---|
| U                 | The analyte was analyzed for, but was not detected above the reported sample quantitation limit.  |
| J                 | The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.   |
| UJ                | The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the action limit of quantitation necessary to accurately and precisely measure the analyte in the sample. |
| R                 | The data are unusable. (The compound may or may not be present)   |

We have reviewed the data by CADRE for the following case:

SITE NAME: Himco Dump (IN)

CASE NUMBER: 26551 SDG NUMBER: MEBQC1

Number and Type of Samples: 14 (soil)

Sample Numbers: MEBQC1-9 MEBQD0-4

Laboratory: Datachem Hrs. for Review: \_\_\_\_\_

Following are our findings:

CC: Cecilia Moore  
Region 5 TPO  
Mail Code: SM-5J

Case Number: 26551  
Site Name: Himco Dump (IN)

SDG Number: MEBQC1  
Laboratory: Datachem

Below is a summary of the out-of-control audits and the possible effects on the data for this case:

14 soil samples, numbered *MEBQC1-9* *MEBQD0-4*, were collected on 10/12 and 10/15/98. The lab received the samples on 10/13 and 10/17/98 in good condition. All samples were analyzed for metals and cyanide. All samples were analyzed using CLP SOW ILM04.0 analysis procedure.

Mercury analysis was performed using a Cold Vapor AA Technique. Cyanide analysis was performed using *MIDI Distillation* procedure. The remaining inorganic analyses were performed using an Inductively Coupled Plasma-Atomic Emission Spectrometric procedure.

SDG Number: MEBQC1  
Laboratory: Datachem

1. HOLDING TIME:

HOLDING TIME CRITERIA

-----

Inorganic

-----

|         | -- Holding Time -- |          | ----- pH ----- |          |
|---------|--------------------|----------|----------------|----------|
|         | Primary            | Expanded | Primary        | Expanded |
| Metals  | 180                | 0        | 2.0            | 0.0      |
| Mercury | 28                 | 0        | 2.0            | 0.0      |
| Cyanide | 14                 | 0        | 12.0           | 0.0      |

DC-280: The following inorganic soil samples were reviewed for holding time violations using criteria developed for water samples.

MEBQC1, MEBQC2, MEBQC3, MEBQC4, MEBQC5, MEBQC6, MEBQC7, MEBQC8  
MEBQC9, MEBQD0, MEBQD1, MEBQD2, MEBQD3, MEBQD4

2. CALIBRATIONS:

CALIBRATION CRITERIA

-----

Inorganic

-----

Percent Recovery Limits

-----

|         | --- Primary --- |        | -- Expanded -- |        |
|---------|-----------------|--------|----------------|--------|
|         | Low             | High   | Low            | High   |
| Cyanide | 85.00           | 115.00 | 70.00          | 130.00 |
| ICP     | 90.00           | 110.00 | 75.00          | 125.00 |
| Mercury | 80.00           | 120.00 | 65.00          | 135.00 |

No problems were found for this qualification.

3. BLANKS:

LABORATORY BLANKS CRITERIA  
-----

DC-283: The following inorganic samples are associated with a blank analyte with negative concentration whose absolute value is greater than the instrument detection limit (IDL). The sample concentration is also greater than the IDL and less than five times the absolute value of the blank. Hits are flagged "J". Some non-detect readings are sufficiently high that the detection limit may be elevated. These non-detects are flagged "UJ".

Beryllium

MEBQC4, MEBQC5, MEBQD3, MEBQD4

Chromium

MEBQC1, MEBQC2

DC-284: The following inorganic samples are associated with a blank concentration which is greater than the instrument detection limit (IDL). The sample concentration is also greater than the IDL and less than five times the blank concentration. Hits are qualified "J"; non-detects are acceptable.

CADRE Data Qualifier Sheet

Qualifiers

Data Qualifier Definitions

- U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- J The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
- UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the action limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
- R The data are unusable. (The compound may or may not be present)

## DATA QUALIFIER DEFINITIONS

For the purpose of defining the flagging nomenclature utilized in this document, the following code letters and associated definitions are provide:

- U Indicates the material was analyzed, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.
- J Indicates the associated value is an estimated quantity.
- R Indicates the data are unusable. (Note: The analyte may or may not be present.)
- UI Indicates the material was analyzed for, but was not detected. The associated value is an estimate and may be inaccurate or imprecise.
- E Indicates the reported value is estimated because of the presence of interferences. An explanatory note shall be included under Comments on the Cover Page (if the problem applies to all samples) or on the specific FORM I-IN (if it is an isolated problem).
- M Indicates duplicate injection precision is not met.
- N Indicates the spike sample recovery is not within control limits.
- S Indicates the reported value was determined by the Method of Standard Addition (MSA).
- W Indicates the post-digestion spike for furnace AA analysis is out of control limits (85%-115%), while sample absorbance is less than 50% of the spike absorbance.
- + Indicates the correlation coefficient for the MSA is less than 0.995.
- \* Indicates the duplicate analysis is not within control limits.

Note: Entering "S", "W" or "+" is mutually exclusive. No combination of these qualifiers can appear in the same field for an analyte.

Case #: 26551  
SDG #: MEBQC1  
DCL Set ID #: 98C-0242, 98C-0245  
November 9, 1998

### General Information

The samples in this SDG were analyzed by methodologies contained in ILM04.0 under contract 68-D5-0133. All concentration, analytical, and method qualifiers are defined in the SOW.

### Holding Times

All samples were prepared and analyzed within method-required holding times.

### Initial and Continuing Calibration

All initial and continuing calibration verification and blank analyses were performed within the designated frequency and recoveries of the verifications and concentrations of the blanks met method acceptance criteria.

### Preparation Blanks

The absolute value of all analyte concentrations in the preparation blank were lower than the Contract Required Detection Limit.

### ICP Interference Check Sample Analysis

Results for the interference check samples met method acceptance criteria.

### Matrix Spike Analysis

All matrix spike recoveries were within the limits of 75-125% with the exception of the Sb recovery. A post digestion spike was performed for Sb. Since all LCS recoveries met method criteria, this poor spike recoveries may be attributed to matrix interference.

### Matrix Duplicate Analysis

All matrix duplicate results met method acceptance criteria with the exception of Cd.

### Laboratory Control Sample Analysis

Results for the analyses of the solid LCS met method acceptance criteria.

### ICP Serial Dilution Analysis

All ICP Serial Dilution results met method acceptance criteria with the exception of Ca and Mg. The reported values for these analytes on Form 1 are therefore estimated because of the presence of interferences.

### Miscellaneous Comments

None.

  
Neil Edwards

CADRE Data Qualifier Sheet

Qualifiers

Data Qualifier Definitions

- U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- J The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
- UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the action limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
- N The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.
- NJ The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification and the associated numerical value represents its approximate concentration.
- R The data are unusable. (The compound may or may not be present)
- H Sample result is estimated and biased high.
- L Sample result is estimated and biased low.

COMPOUND IDENTIFICATION

After reviewing the mass spectra and chromatograms it appears that all VOA, SVOA, and Pesticide/PCB compounds were properly identified.

10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

The following volatile samples have analyte concentrations below the quantitation limit (CRQL). All results below the CRQL are qualified "J".

ECMM4, ECMQ4  
 1,1-Dichloroethane

VBLKE2  
 Methylene Chloride

The following semivolatile samples have analyte concentrations below the quantitation limit (CRQL). All results below the CRQL are qualified "J"

ECMM0, ECMQ4, ECMR1  
 bis(2-Ethylhexyl)phthalate

ECMM4, ECMM5RE, ECMQ0  
 Diethylphthalate

ECMM5  
 Dimethylphthalate

11. SYSTEM PERFORMANCE

GC/MS baseline indicated acceptable performance. The GC baseline for the pesticide analysis was acceptable.

#### 6. MATRIX SPIKE/MATRIX SPIKE DUPLICATE

No problems found for this qualification.

#### 7. FIELD BLANK AND FIELD DUPLICATE

According to the chain-of-custody the following as field duplicate pair ECMQ5 and ECMQ9, ECMM5 and ECMQ0. Sample ECMQ5 was not analyzed with the data set. The lab did not report hits in any of the samples analyzed.

#### 8. INTERNAL STANDARDS

The following semivolatiles samples have internal standard retention times outside criteria. Hits are flagged "J" and non-detects are flagged "UJ"

##### ECMQ2RE

Pyrene, Butylbenzylphthalate, 3,3'-Dichlorobenzidine,  
 Benzo(a)anthracene, Chrysene, bis(2-Ethylhexyl)phthalate,  
 Di-n-octylphthalate, Benzo(b)fluoranthene, Benzo(k)fluoranthene,  
 Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenz(a,h)anthracene,  
 Benzo(g,h,i)perylene

The following semivolatiles samples have internal standard area counts that are outside the lower limit of primary criteria. Hits are qualified "J" and non-detects are qualified "UJ".

##### ECMM5

Pyrene, Butylbenzylphthalate, 3,3'-Dichlorobenzidine,  
 Benzo(a)anthracene, Chrysene, bis(2-Ethylhexyl)phthalate

##### ECMQ2

Hexachlorocyclopentadiene, 2,4,6-Trichlorophenol,  
 2,4,5-Trichlorophenol, 2-Chloronaphthalene, 2-Nitroaniline,  
 Dimethylphthalate, Acenaphthylene, 2,6-Dinitrotoluene,  
 3-Nitroaniline, Acenaphthene, 2,4-Dinitrophenol, 4-Nitrophenol,  
 Dibenzofuran, 2,4-Dinitrotoluene, Diethylphthalate,  
 4-Chlorophenyl-phenylether, Fluorene, 4-Nitroaniline, Pyrene,  
 Butylbenzylphthalate, 3,3'-Dichlorobenzidine,  
 Benzo(a)anthracene, Chrysene, bis(2-Ethylhexyl)phthalate

The following semivolatiles samples have internal standard area counts outside expanded criteria. Hits are qualified "J" and non-detects are qualified "R".

##### ECMM5

Hexachlorocyclopentadiene, 2,4,6-Trichlorophenol,

4. BLANKS

No problems found for this qualification.

SYSTEM MONITORING COMPOUND AND SURROGATE RECOVERY

The following semivolatile samples have two or more base/neutral surrogate recoveries above the upper limit of the criteria window. Hits are biased high and qualified "J" and non-detects are not flagged.

ECMM5,

The following semivolatile samples have two or more acid surrogate recoveries above the upper limit of the criteria window. Hits are biased high and qualified "J" and non-detects are not flagged.

ECMM5, ECMQ2

The following semivolatile samples have one base/neutral surrogate recoveries above the upper limit of the criteria window. No action need be taken.

ECMQ2

The following semivolatile samples have one acid surrogate recoveries above the upper limit of the criteria window. Because only one surrogate is out of control no action need be taken.

ECMM2, ECMM0, ECMM0MS

### 1. HOLDING TIME

The following preserved volatile water samples are outside primary hold time criteria. Hits are qualified "J" and non-detects are qualified "UJ". Results are biased low.

ECMM1, ECMM3, ECMQ1

The following semivolatile water samples are outside primary extraction holding time criteria. Hits are qualified "J" and non-detects are qualified "UJ". Results are biased low.

ECMM5RE, ECMQ2RE

### 2. GC/MS TUNING AND GC INSTRUMENT PERFORMANCE

No problems found for this qualification.

### 3. CALIBRATION

The following volatile samples are associated with a continuing calibration whose corresponding initial calibration has percent relative standard deviation (%RSD) outside primary criteria. Hits are qualified "J" and non-detects are flagged "UJ".

Bromomethane, 2-Butanone

ECMM0, ECMM0MS, ECMM0MSD, ECMM1, ECMM2, ECMM3  
 ECMM4, ECMM5, ECMQ0, ECMQ1, ECMQ2, ECMQ3  
 ECMQ4, VBLKE2, VBLKE5, VBLKE7, VHBLKE2

The following volatile samples are associated with a continuing calibration percent difference (%D) outside primary criteria. Hits are qualified "J" and non-detects are qualified "UJ".

2-Butanone

ECMM2, ECMM3, ECMM4, VBLKE5

1,1,2,2-Tetrachloroethane

ECMM0, ECMM0MS, ECMM0MSD, ECMM1, ECMM5, ECMQ0  
 ECMQ1, ECMQ2, ECMQ3, ECMQ4, VBLKE2, VBLKE7  
 VHBLKE2

The following semivolatile samples are associated with a continuing calibration percent difference (%D) outside primary criteria. Hits are qualified "J" and non-detects are qualified "UJ".

Below is a summary of the out-of-control audits and the possible effects on the data for this case:

Fifteen (15) water samples, numbered ECMM0 through ECMM5, ECMQ0 through ECMQ4, ECMQ5 and ECMR1, were collected on October 1, 2, 19, 20, 21 and 22, 1998. The lab received the samples on October 20, 21, 22, 23, and 24, 1998 in good condition. All samples were analyzed for the full list of volatile and semivolatile organic analytes with the exception of ECMQ1, ECMM3 and ECMM1 which are trip blanks and only analyzed for volatiles.

According to the chain-of-custody the following are field duplicate pairs: ECMQ5 and ECMQ9, ECMM5 and ECMQ0.

CADRE Data Qualifier Sheet

Qualifiers

Data Qualifier Definitions

- U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- J The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
- UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the action limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
- N The analysis indicates the present of an analyte for which there is presumptive evidence to make a tentative identification.
- NJ The analysis indicates the present of an analyte for which there is presumptive evidence to make a tentative identification and the associated numerical value represents its approximate concentration.
- R The data are unusable. (The compound may or may not be present)
- H Sample result is estimated and biased high.
- L Sample result is estimated and biased low.

Indeno(1,2,3-cd)pyrene, Benzo(g,h,i)perylene

ECMN7

Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, bis(2-Ethylhexyl)phthalate,  
 Benzo(b)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Benzo(g,h,i)perylene

## 11. SYSTEM PERFORMANCE

GC/MS baseline indicated acceptable performance.

## 12. ADDITIONAL INFORMATION ECML0-9, ECMM6-7, ECMK8-9, ECMN0-4, ECMN7

Below is the summary of the pH for the samples of this dataset:

| Sample ID | pH  |
|-----------|-----|
| ECML0     | 7.3 |
| ECML1     | 7.0 |
| ECML2     | 7.6 |
| ECML3     | 7.6 |
| ECML4     | 7.8 |
| ECML5     | 7.9 |
| ECML6     | 6.1 |
| ECML7     | 6.0 |
| ECML8     | 6.3 |
| ECML9     | 5.7 |
| ECMM6     | 5.6 |
| ECMM7     | 5.5 |
| ECMK8     | 7.2 |
| ECMK9     | 7.7 |
| ECMN0     | 5.4 |
| ECMN1     | 5.1 |
| ECMN2     | 4.9 |
| ECMN3     | 4.7 |
| ECMN4     | 6.8 |
| ECMN7     | 6.6 |

No flags were entered for the SVOA TIC results for the CADRE report. Please refer to Form I SVOA for the final flags of the SVOA TIC results.

No method blank reports were printed out.

## 8. INTERNAL STANDARDS

The following volatile samples have internal standard area counts that are outside the lower limit of primary criteria. Hits are qualified "J" and non-detects are qualified "UJ".

ECMN7, ECMN7RE

Chloromethane, Bromomethane, Vinyl Chloride, Chloroethane  
 Methylene Chloride, Acetone, Carbon Disulfide, 1,1-Dichloroethene  
 1,1-Dichloroethane, 1,2-Dichloroethene (total), Chloroform, 1,2-Dichloroethane  
 2-Butanone, 1,1,1-Trichloroethane, Carbon Tetrachloride, Bromodichloromethane  
 1,2-Dichloropropane, cis-1,3-Dichloropropene, Trichloroethene, Dibromochloromethane  
 1,1,2-Trichloroethane, Benzene, trans-1,3-Dichloropropene, Bromoform

The following volatile samples have internal standard area counts outside expanded criteria. Hits are qualified "J" and non-detects are qualified "R".

ECMN7, ECMN7RE

4-Methyl-2-Pentanone, 2-Hexanone, Tetrachloroethene, 1,1,2,2-Tetrachloroethane  
 Toluene, Chlorobenzene, Ethylbenzene, Styrene, Xylene (total)

## 9. COMPOUND IDENTIFICATION

After reviewing the mass spectra and chromatograms, it appears that all VOA and SVOA compounds were properly identified.

## 10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

The following volatile samples have analyte concentrations below the quantitation limit (CRQL). All results below the CRQL are qualified "J".

VBLKE2

Methylene Chloride

The following semivolatile samples have analyte concentrations below the quantitation limit (CRQL). All results below the CRQL are qualified "J".

ECMK8

Acenaphthene, Phenanthrene, Anthracene, Carbazole, Dibenz(a,h)anthracene

ECMK9

Phenanthrene, Anthracene, Benzo(a)anthracene, Chrysene, Benzo(k)fluoranthene,  
 Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenz(a,h)anthracene, Benzo(g,h,i)perylene

Case Number : 26593  
 Site Name: Himco Dump (IN)

SDG Number: ECML0  
 Laboratory: AEN (IEA)

elevated to the CRQL. Hits are qualified "U" and non-detects are not flagged.

bis(2-Ethylhexyl)phthalate  
 ECML0, ECML1, ECML2, ECML3, ECML4, ECML6, ECML7, ECML8, ECML9, ECMM6

## 5. SYSTEM MONITORING COMPOUND AND SURROGATE RECOVERY

The following volatile samples have system monitoring compound recoveries above the upper limit of the criteria window. Hits are qualified "J" and non-detects are qualified as in section 8.

ECMN7RE

The following volatile samples have system monitoring compound recoveries above the upper limit of the criteria window. Hits are qualified "J" and non-detects are qualified below.

ECMN7

The following volatile samples have one or more system monitoring compound recovery values below the lower limit of the criteria window. Hits are biased low and qualified "J" and non-detects are qualified "UJ". However, if the non-detect was flagged as "R" under other qualification, then the "R" flag will be the final flag.

ECMN7

The following semivolatile samples have one surrogate compound recovery outside the QC window. Hits and non-detects are not qualified since the protocol allows at least one surrogate to be out of control before a reanalysis qualification is required.

ECMN7

## 6. MATRIX SPIKE/MATRIX SPIKE DUPLICATE

The relative percent difference (RPD) between the following semivolatile matrix spike and matrix spike duplicate recoveries is outside criteria. Hits are qualified "J" and non-detects are qualified "UJ" for the unspiked sample.

ECML4MS, ECML4MSD  
 Acenaphthene

## 7. FIELD BLANK AND FIELD DUPLICATE

None of the samples in this data set are field blanks or field duplicates.

Case Number : 26593  
Site Name: Himco Dump (IN)

SDG Number: ECML0  
Laboratory: AEN (IEA)

### 1. HOLDING TIME

No problems were found for this qualification.

### 2. GC/MS TUNING AND GC INSTRUMENT PERFORMANCE

No problems were found for this qualification.

### 3. CALIBRATION

The following volatile samples are associated with a continuing calibration whose corresponding initial calibration has percent relative standard deviation (%RSD) outside primary criteria. Hits are qualified "J" and non-detects are flagged "UJ".

Bromomethane, 2-Butanone  
VBLKE2, VHBLKE1

#### Chloroethane

ECMK8, ECMK9, ECML0, ECML1, ECML2, ECML3, ECML4, ECML4MS, ECML4MSD  
ECML5, ECML6, ECML7, ECML8, ECML9, ECMM6, ECMM7, ECMN0, ECMN1  
ECMN2, ECMN3, ECMN4, ECMN7, ECMN7RE, VBLKE1

The following volatile samples are associated with a continuing calibration percent difference (%D) outside primary criteria. Hits are qualified "J" and non-detects are qualified "UJ". However, if the non-detect was flagged "R" under other qualification, then the "R" flag will be the final flag.

#### Trichloroethene, Tetrachloroethene

ECMK8, ECMK9, ECML0, ECML1, ECML2, ECML3, ECML4, ECML4MS, ECML4MSD,  
ECML5, ECML6, ECML7, ECML8, ECML9, ECMM6, ECMM7, ECMN0, ECMN1  
ECMN2, ECMN3, ECMN4, ECMN7, ECMN7RE, VBLKE1

#### 1,1,2,2-Tetrachloroethane

VBLKE2, VHBLKE1

The following semivolatile samples are associated with a continuing calibration percent difference (%D) outside primary criteria. Hits are qualified "J" and non-detects are qualified "UJ".

#### 4-Chloroaniline, Di-n-butylphthalate

ECMK8, ECMK9, ECML8, ECML9, ECMM6, ECMM7

### 4. METHOD BLANKS

The following semivolatile samples have analyte concentrations reported below the CRQL and less than or equal to ten times (10X) the associated method blank concentration. Reported sample concentrations have been

**Below is a summary of the out-of-control audits and the possible effects on the data for this case:**

Twenty soil samples (ECML0-9, ECMM6-7, ECMK8-9, ECMN0-4, ECMN7) were collected on 10/19-20/98. The lab received the samples on 10/20-21/98 in good condition. All samples were analyzed for the list of VOA and SVOA analytes. All samples were analyzed according to CLP SOW OLMO3.2 3/90.

## CADRE Data Qualifier Sheet

| <u>Qualifiers</u> | <u>Data Qualifier Definitions</u>   |
|-------------------|---|
| U                 | The analyte was analyzed for, but was not detected above the reported sample quantitation limit.  |
| J                 | The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.   |
| UJ                | The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the action limit of quantitation necessary to accurately and precisely measure the analyte in the sample. |
| N                 | The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.   |
| NJ                | The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification and the associated numerical value represents its approximate concentration.   |
| R                 | The data are unusable. (The compound may or may not be present)   |
| H                 | Sample result is estimated and biased high.   |
| L                 | Sample result is estimated and biased low.  |

## 12. ADDITIONAL INFORMATION

According to the chain-of-custody, the lab received the sample aliquots for semi-volatile analysis for all samples except the trip blank, but did not perform the semi-volatile analysis for samples ECMQ9 and ECMR1. The lab did not include the sample tags for the SVOA fraction for samples ECMQ9 and ECMR1 in the data case. There is no record of communication between the lab and any government agency as to what happened to the analysis of the SVOA fraction for the listed samples.

SDG Number: ECMQ5  
Laboratory: IEA-NJ

#### 6. MATRIX SPIKE/MATRIX SPIKE DUPLICATE

The relative percent difference (RPD) between the following semivolatile matrix spike and matrix spike duplicate recoveries is outside criteria. In sample ECMQ5 hits are flagged "J" and non-detects are flagged "UJ".

ECMQ5MS  
4-Chloro-3-methylphenol

ECMQ5MSD  
4-Chloro-3-methylphenol

The following semivolatile matrix spike/matrix spike duplicate samples have percent recovery outside criteria. Although the recovery exceeded the upper limit, the actual recovery was less than 100% of what was spike therefore no action need to taken for this "out of control condition".

ECMQ5MSD  
4-Nitrophenol

#### 7. FIELD BLANK AND FIELD DUPLICATE

According to the chain-of-custody sample ECMQ9 and ECMQ5 are a field duplicate sample pair in this data set. Sample ECMQ5 was analyzed in this data set, sample ECMQ9 was not analyzed in this data set. The reviewer was unable to determine which data set includes the missing sample.

#### 8. INTERNAL STANDARDS

No problems found for this qualification.

#### 9. COMPOUND IDENTIFICATION

After reviewing the mass spectra and chromatograms it appears that all VOA, and SVOA compounds were properly identified.

#### 10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

No problems found for this qualification.

#### 11. SYSTEM PERFORMANCE

GC/MS baselines indicated acceptable performance.

SDG Number: ECMQ5  
Laboratory: IEA-NJ

### 1. HOLDING TIME

The trip blank was "sampled" on November 2, 1998 and analyzed outside of holding time windows. The data for ECMR0 is qualified "R" unusable.

### 2. GC/MS TUNING AND GC INSTRUMENT PERFORMANCE

No problems found for this qualification.

### 3. CALIBRATION

The following volatile samples are associated with a continuing calibration whose corresponding initial calibration has percent relative standard deviation (%RSD) outside primary criteria. Hits are qualified "J" and non-detects are flagged "UJ".

Bromomethane, 2-Butanone

ECMQ5, ECMQ5MS, ECMQ5MSD, ECMQ9, ECMR1, VBLKE5, VBLKE7, VHBLK

The following volatile samples are associated with a continuing calibration percent difference (%D) outside primary criteria. Hits are qualified "J" and non-detects are qualified "UJ".

2-Butanone

ECMQ5, ECMQ5MS, ECMQ5MSD, ECMQ9, ECMR1, VBLKE5

1,1,2,2-Tetrachloroethane

VBLKE7, VHBLKE2

The following semivolatile samples are associated with a continuing calibration percent difference (%D) outside primary criteria. Hits are qualified "J" and non-detects are qualified "UJ".

4-Chloroaniline, Di-n-butylphthalate

ECMQ5, ECMQ5MS, SBLKH2

### 4. BLANKS

No problems found for this qualification.

### 5. SYSTEM MONITORING COMPOUND AND SURROGATE RECOVERY

The recovery of surrogate S3 (Terphenyl<sub>d14</sub>) in ECMQ5MS was low and S6 (2,4,6-Tribromophenol) in ECMQ5MSD was high. Because only one surrogate in any fraction was out of control in either sample, no action need be taken.

Below is a summary of the out-of-control audits and the possible effects on the data for this case:

*COC says OCT 98*  
Four water samples, numbered ECMQ5, ECMQ9, ECMR0, and ECMR1, were collected on November 2 and 22, 1998. The lab received the samples on November 23, 1998 in good condition. All samples were analyzed for the full list of volatile organic analytes, only sample ECMQ5 was analyzed for the semi-volatile list of organic analytes.

Sample ECMR0 is a trip blank. Sample ECMR1 is a rinseate blank.

According to the chain-of-custody, the lab received the sample aliquots for semi-volatile analysis for all samples except the trip blank, but did not perform the semi-volatile analysis for samples ECMQ9 and ECMR1.

CADRE Data Qualifier Sheet

| <u>Qualifiers</u> | <u>Data Qualifier Definitions</u>   |
|-------------------|---|
| U                 | The analyte was analyzed for, but was not detected above the reported sample quantitation limit.  |
| J                 | The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.   |
| UJ                | The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the action limit of quantitation necessary to accurately and precisely measure the analyte in the sample. |
| N                 | The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.   |
| NJ                | The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification and the associated numerical value represents its approximate concentration.   |
| R                 | The data are unusable. (The compound may or may not be present)   |
| H                 | Sample result is estimated and biased high.   |
| L                 | Sample result is estimated and biased low.  |

## 12. ADDITIONAL INFORMATION

pH Table.

| Sample ID: | Matrix: | pH  | Sample ID: | Martrix: | pH  |
|------------|---------|-----|------------|----------|-----|
| ECMP3      | Soil    | 7.8 | ECMP7      | Soil     | 7.3 |
| ECMP4      | Soil    | 8.3 | ECMP8      | Soil     | 8.0 |
| ECMP5      | Soil    | 8.1 | ECMP9      | Soil     | 7.4 |
| ECMP6      | Soil    | 7.2 | ECMQ6      | Soil     | 7.9 |

benanthrene, Fluoranthene and Pyrene exceeded the instrument's calibration range in semivolatile sample ECMP4; the results from ECMP4DL should be considered the concentrations for these analytes.

## 8. INTERNAL STANDARDS

No problems found for this qualification.

## 9. COMPOUND IDENTIFICATION

After reviewing the mass spectra and chromatograms it appears that all VOA, SVOA, and Pesticide/PC compounds were properly identified.

## 10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

The following semivolatile samples have analyte concentrations below the quantitation limit (CRQL). All results below the CRQL are qualified "J".

### ECMP3

Phenanthrene, Benzo(a)anthracene, Chrysene, bis(2-Ethylhexyl)phthalate,  
Benzo(k)fluoranthene, Dibenz(a,h)anthracene

### ECMP4

Acenaphthene, Dibenzofuran, Fluorene, Carbazole, bis(2-Ethylhexyl)phthalate,  
Dibenz(a,h)anthracene

### ECMP4DL

Acenaphthene, Dibenzofuran, Fluorene, Anthracene, Carbazole, bis(2-Ethylhexyl)phthalate,  
Benzo(k)fluoranthene, Dibenz(a,h)anthracene

### ECMP5

Fluoranthene, Benzo(a)anthracene, Chrysene, bis(2-Ethylhexyl)phthalate,  
Benzo(b)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Benzo(g,h,i)perylene

### ECMP9MS

bis(2-Ethylhexyl)phthalate

### SBLKH5

Pyrene

## 11. SYSTEM PERFORMANCE

GC/MS baseline indicated acceptable performance. The GC baseline for the pesticide analysis was acceptable.

 ECMQ6, SBLKH5

#### 4. BLANKS

The following semivolatile samples have analyte concentrations reported below the CRQL and less than or equal to five times (5X) the associated method blank concentration. Reported sample concentrations have been elevated to the CRQL. Hits are flagged "U" and non-detects are not flagged.

ECMP5

Pyrene

#### SYSTEM MONITORING COMPOUND AND SURROGATE RECOVERY

No problems found for this qualification.

#### 6. MATRIX SPIKE/MATRIX SPIKE DUPLICATE

The relative percent difference (RPD) between the following semivolatile matrix spike and matrix spike duplicate recoveries is outside criteria.

ECMP9MS, ECMP9MSD

Phenol, 1,4-Dichlorobenzene, 1,2,4-Trichlorobenzene, 4-Chloro-3-methylphenol,  
 Acenaphthene, Pentachlorophenol, Pyrene

The following semivolatile matrix spike/matrix spike duplicate samples have percent recovery outside criteria.

ECMP9MSD

Phenol

The presence of Phenol, 1,4-Dichlorobenzene, 1,2,4-Trichlorobenzene, 4-Chloro-3-methylphenol, Acenaphthene, Pentachlorophenol and Pyrene in the unspiked sample, ECMP9, is qualified "J" and non-detects are flagged "UJ".

#### 7. FIELD BLANK AND FIELD DUPLICATE

No samples were field blanks or field duplicates. Results are not qualified based upon the results of the field blank or field duplicates.

### 1. HOLDING TIME

No problems found for this qualification.

### 2. GC/MS TUNING AND GC INSTRUMENT PERFORMANCE

No problems found for this qualification.

### 3. CALIBRATION

The following volatile samples are associated with a continuing calibration whose corresponding initial calibration has percent relative standard deviation (%RSD) outside primary criteria. Hits are qualified "J" and non-detects are flagged "UJ".

Bromomethane, 2-Butanone  
VBLKE7, VHBLKE2

Chloroethane  
ECMP3, ECMP4, ECMP5, ECMP6, ECMP7, ECMP8, ECMP9, ECMP9MS, ECMP9M  
ECMQ6, VBLKE4

The following volatile samples are associated with a continuing calibration percent difference (%D) outside primary criteria. Hits are qualified "J" and non-detects are qualified "UJ".

Chloromethane, Tetrachloroethene  
ECMP3, ECMP4, ECMP5, ECMP6, ECMP7, ECMP8, ECMP9, ECMP9MS, ECMP9MSD,  
ECMQ6, VBLKE4

1,1,2,2-Tetrachloroethane  
VBLKE7, VHBLKE2

The following semivolatile samples are associated with a continuing calibration percent difference (%D) outside primary criteria. Hits are qualified "J" and non-detects are qualified "UJ".

Hexachloroethane, 4-Nitrophenol, bis(2-Ethylhexyl)phthalate, Di-n-octylphthalate  
ECMP3, ECMP4, ECMP4DL, ECMP5, ECMP6, ECMP7, ECMP8, ECMP9, ECMP9MS,

Below is a summary of the out-of-control audits and the possible effects on the data for this case:

*Eight (8) soil samples, numbered ECMP3 through ECMP9, and ECMQ6 were collected on October 21, 1998. The lab received the samples on October 22, 1998 in good condition. All samples were analyzed for the volatile and semivolatile list of organic analytes. All were analyzed according to CLP SOW OLM03.2 3/90.*

## CADRE Data Qualifier Sheet

### Qualifiers

### Data Qualifier Definitions

- U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- J The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
- UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the action limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
- N The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.
- NJ The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification and the associated numerical value represents its approximate concentration.
- R The data are unusable. (The compound may or may not be present)
- H Sample result is estimated and biased high.
- L Sample result is estimated and biased low.

SDG Number: ECMK2  
Laboratory: Compuchem

## 11. SYSTEM PERFORMANCE

GC/MS baseline indicated acceptable performance.

## 12. ADDITIONAL INFORMATION

Below is the summary of the pH for the samples of this data set:ECMJ4-ECMJ9, ECMK0-ECMK7

| Sample ID | pH  |
|-----------|-----|
| ECMJ4     | 6.8 |
| ECMJ5     | 6.3 |
| ECMJ6     | 9.1 |
| ECMJ7     | 7.0 |
| ECMJ8     | 7.7 |
| ECMJ9     | 7.9 |
| ECMK0     | 7.9 |
| ECMK1     | 7.5 |
| ECMK2     | 6.4 |
| ECMK3     | 6.2 |
| ECMK4     | 6.5 |
| ECMK5     | 7.8 |
| ECMK6     | 6.2 |
| ECMK7     | 7.7 |

No flag was entered for the SVOA TIC results for CADRE report, please refer to Form I SVOA for the final flag of the SVOA TIC results.

No reports were print out for the method blanks.

The results for fluoranthene, benzo(k)fluoranthene for ECMK0 were quantitated outside the calibration range. The results for phenanthrene, anthracene, fluoranthene, pyrene, benzo(a)anthracene, chrysene, benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene and benzo(g,h,i)perylene for sample ECMK1 were quantitated outside the calibration range. For any analyte that exceeded the calibration range in the original sample analysis; the results of the diluted analysis should be considered the sample's analyte concentration. Please, refer to Form Is for compounds which were quantitated outside the calibration range for the above SVOA samples.

## ECMJ9

Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene  
Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene  
Indeno(1,2,3-cd)pyrene, Benzo(g,h,i)perylene

## ECMK0

4-Methylphenol, Naphthalene, 2-Methylnaphthalene, Acenaphthylene  
Acenaphthene, Dibenzofuran, Fluorene, Carbazole, bis(2-Ethylhexyl)phthalate

## ECMK0DL

Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene  
Dibenzofuran, Fluorene, Anthracene, Carbazole, Dibenz(a,h)anthracene

## ECMK1

bis(2-Ethylhexyl)phthalate

## ECMK1DL

Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene  
Dibenzofuran, Fluorene, Anthracene, Carbazole, Dibenz(a,h)anthracene

## ECMK2

bis(2-Ethylhexyl)phthalate

## ECMK4

Acenaphthene, Anthracene, Carbazole, bis(2-Ethylhexyl)phthalate  
Di-n-octylphthalate

## ECMK5

Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene  
Chrysene, bis(2-Ethylhexyl)phthalate, Benzo(b)fluoranthene, Benzo(k)fluoranthene  
Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenz(a,h)anthracene, Benzo(g,h,i)perylene

## ECMK6

1,4-Dichlorobenzene, Naphthalene, Diethylphthalate, Phenanthrene  
Anthracene, Butylbenzylphthalate, Benzo(a)anthracene, bis(2-Ethylhexyl)phthalate  
Indeno(1,2,3-cd)pyrene, Dibenz(a,h)anthracene, Benzo(g,h,i)perylene

## ECMK7

1,4-Dichlorobenzene, Naphthalene, Diethylphthalate, Phenanthrene  
Anthracene, Benzo(a)anthracene, bis(2-Ethylhexyl)phthalate, Indeno(1,2,3-cd)pyrene  
Dibenz(a,h)anthracene, Benzo(g,h,i)perylene

Case Number : 26551  
Site Name: Kinco Dump (IN)

SDG Number: ECMK2  
Laboratory: Compuchem

VBLKX4  
Methylene Chloride, 2-Hexanone

VHBLKY9  
Methylene Chloride, Acetone

The following semivolatile samples have analyte concentrations below the quantitation limit (CRQL). All results below the CRQL are qualified "J".

ECMJ4  
Acenaphthylene, Phenanthrene, Anthracene, Di-n-butylphthalate, Benzo(a)anthracene, Chrysene, bis(2-Ethylhexyl)phthalate, Dibenz(a,h)anthracene, Benzo(g,h,i)perylene

ECMJ5  
Acenaphthylene, Fluorene, Anthracene, Carbazole  
Di-n-butylphthalate, bis(2-Ethylhexyl)phthalate, Dibenz(a,h)anthracene

ECMJ6  
Phenanthrene, Pyrene, Benzo(a)anthracene, Chrysene  
bis(2-Ethylhexyl)phthalate, Di-n-octylphthalate, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene  
Dibenz(a,h)anthracene, Benzo(g,h,i)perylene

ECMJ7  
Anthracene, Carbazole, Benzo(a)anthracene, Chrysene  
bis(2-Ethylhexyl)phthalate, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene  
Indeno(1,2,3-cd)pyrene, Dibenz(a,h)anthracene, Benzo(g,h,i)perylene

ECMJ7MS  
Naphthalene, Pentachlorophenol, Phenanthrene, Benzo(a)anthracene  
Chrysene, bis(2-Ethylhexyl)phthalate, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene  
Dibenz(a,h)anthracene, Benzo(g,h,i)perylene

ECMJ7MSD  
Naphthalene, Pentachlorophenol, Phenanthrene, Fluoranthene  
Benzo(a)anthracene, Chrysene, bis(2-Ethylhexyl)phthalate, Benzo(b)fluoranthene  
Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenz(a,h)anthracene  
Benzo(g,h,i)perylene

ECMJ8  
Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene  
Chrysene, bis(2-Ethylhexyl)phthalate, Benzo(b)fluoranthene, Benzo(k)fluoranthene  
Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Benzo(g,h,i)perylene

#### 6. MATRIX SPIKE/MATRIX SPIKE DUPLICATE

The relative percent difference (RPD) between the following semivolatile matrix spike and matrix spike duplicate recoveries is outside criteria. Hits are qualified "J" and non-detects are qualified "UJ" for the unspiked sample.

ECMJ7MS, ECMJ7MSD  
1,2,4-Trichlorobenzene, 4-Chloro-3-methylphenol, Acenaphthene, Pyrene

The following semivolatile matrix spike/matrix spike duplicate samples have percent recovery outside criteria. Hits are qualified "J" and non-detects are qualified "UJ" for the unspiked sample.

ECMJ7MSD  
N-Nitroso-di-n-propylamine, 1,2,4-Trichlorobenzene, Pyrene

#### 7. FIELD BLANK AND FIELD DUPLICATE

None of the samples in this data set are field blanks or field duplicates.

#### 8. INTERNAL STANDARDS

No problems were found for this qualification.

#### 9. COMPOUND IDENTIFICATION

After reviewing the mass spectra and chromatograms, it appears that all VOA and SVOA compounds were properly identified.

#### 10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

The following volatile samples have analyte concentrations below the quantitation limit (CRQL). All results below the CRQL are qualified "J".

ECMJ4, ECMJ5, ECMJ6, ECMJ7, ECMJ9, ECMK0, ECMK1, ECMK2, ECMK3  
Acetone

ECMK6  
1,1-Dichloroethane, Benzene, Xylene (total)

ECMK7  
Carbon Disulfide, 1,1-Dichloroethane, Benzene, Xylene (total)

VBLKA5, VBLKX5  
Methylene Chloride, Acetone, 2-Butanone, 2-Hexanone

Prepared By: Steffanie Tobin (Lockheed/ESAT)  
Date: November 10, 1998

Case Number : 26551  
Site Name: Kinco Dump (IN)

SDG Number: ECMK2  
Laboratory: Compuchem

4-Nitroaniline

ECMK0, ECMK0DL, ECMK1DL, ECMK2, ECMK3, SBLKTD

4,6-Dinitro-2-methylphenol, Di-n-octylphthalate

ECMJ4, ECMJ5, ECMJ6, ECMJ7, ECMJ7MS, ECMJ7MSD  
ECMJ8, ECMJ9, ECMK1, ECMK4, ECMK5, ECMK6, ECMK7, SBLKVP

Hexachlorobenzene, Carbazole, 3,3'-Dichlorobenzidine

ECMK2, ECMK3, SBLKTD

bis(2-Ethylhexyl)phthalate

ECMJ4, ECMJ5, ECMJ6, ECMJ7, ECMJ7MS, ECMJ7MSD  
ECMJ8, ECMJ9, ECMK0, ECMK0DL, ECMK1, ECMK1DL  
ECMK2, ECMK3, ECMK4, ECMK5, ECMK6, ECMK7, SBLKTD, SBLKVP

#### 4. METHOD BLANKS

The following volatile samples have analyte concentrations reported above the CRQL and less than or equal to ten times (10X) the associated method blank concentration. Hits are biased high and qualified "U" and non-detects are not flagged.

Methylene Chloride

ECMJ4, ECMJ7, ECMJ9, ECMJ9MSD, ECMK0, ECMK1  
ECMK3, ECMK4, ECMK5, ECMK6, ECMK7

Acetone

ECMK7

The following volatile samples have analyte concentrations reported below the CRQL and less than or equal to ten times (10X) the associated method blank concentration. Reported sample concentrations have been elevated to the CRQL. Hits are qualified "U" and non-detects are not flagged.

Methylene Chloride

ECMJ8, ECMJ9MS

Acetone

ECMJ8, ECMK6

2-Butanone

ECMK6, ECMK7

#### 5. SYSTEM MONITORING COMPOUND AND SURROGATE RECOVERY

No problems were found for this qualification.

### 1. HOLDING TIME

No problems were found for this qualification.

### 2. GC/MS TUNING AND GC INSTRUMENT PERFORMANCE

No problems were found for this qualification.

### 3. CALIBRATION

The following volatile samples are associated with a continuing calibration whose corresponding initial calibration has percent relative standard deviation (%RSD) outside primary criteria. Hits are qualified "J" and non-detects are flagged "UJ".

Acetone

ECMJ4, ECMJ5, ECMJ6, ECMJ7, ECMJ8, ECMJ9  
ECMJ9MS, ECMJ9MSD, ECMK0, ECMK1, ECMK2, ECMK3  
ECMK4, ECMK5, ECMK6, ECMK7, VBLKA5, VBLKX4, VBLKX5, VHBLKY9

The following volatile samples are associated with a continuing calibration percent difference (%D) outside primary criteria. Hits are qualified "J" and non-detects are qualified "UJ".

Chloromethane, Vinyl Chloride, 2-Butanone, 4-Methyl-2-Pentanone, 2-Hexanone  
ECMJ4, ECMJ5, ECMJ6, ECMJ7, ECMJ9, ECMK0  
ECMK1, ECMK2, ECMK3, VBLKX4

Acetone

ECMJ8, ECMJ9MS, ECMJ9MSD, ECMK4, ECMK5, ECMK6  
ECMK7, VBLKA5, VBLKX5, VHBLKY9

The following semivolatile samples are associated with a continuing calibration whose corresponding initial calibration has percent relative standard deviation (%RSD) outside primary criteria. Hits are qualified "J" and non-detects are flagged "UJ".

4-Nitroaniline, Carbazole  
ECMK2, ECMK3, SBLKTD

The following semivolatile samples are associated with a continuing calibration percent difference (%D) outside primary criteria. Hits are qualified "J" and non-detects are qualified "UJ".

Hexachlorobutadiene, 2,4-Dinitrophenol, Pentachlorophenol, Butylbenzylphthalate  
ECMJ4, ECMJ5, ECMJ6, ECMJ7, ECMJ7MS, ECMJ7MSD, ECMJ8, ECMJ9, ECMK0,  
ECMK0DL, ECMK1, ECMK1DL, ECMK4, ECMK5, ECMK6, ECMK7, SBLKVP

**Below is a summary of the out-of-control audits and the possible effects on the data for this case:**

Fourteen soil samples (ECMJ4-ECMJ9, ECMK0-ECMK7) were collected on 10/15/98. The lab received the samples on 10/16/98 in good condition. All samples were analyzed for the list of VOA and SVOA analytes. All samples were analyzed according to CLP SOW OLMO3.2 3/90.

Case Number : 9811284  
Site Name: Himco Dump

SDG Number:  
Laboratory: AIR TOXICS LTD

Below is a summary of the out-of-control audits and the possible effects on the data for this case:

10 VOST cartridges (7205 A&B, 7113 A&B, 7116 A&B, 7106 A&B, 7122 A&B, 7104 A&B, 7123 A&B, 7203 A&B, 7215 A&B, 7201A&B) were collected on 11/16/98. The lab received the samples on 11/17/98 in good condition. All samples were analyzed for the list of volatile analytes. All samples were analyzed following SW846 Methods 5041A/8260B (dissolved gases).

All sample analysis were performed within the technical holding time of fourteen (14) day after sample collection; therefore, the results are acceptable.

SUBJECT: Review of Data  
Received for Review on April 20, 1999

FROM: Stephen L. Ostrodka, Chief (SRT-4J)  
Superfund Technical Support Section

*per Steve Ostrodka  
Richard J. Byrnie  
5/6/99*

TO: Data User: U.S. Army Corps Of Engineers

We have reviewed the data for the following case:

Site name: Himco Dump

Case number: 9811284 SDG Number: \_\_\_\_\_

Number and Type of Samples: 10 VOST cartridges

Sample Numbers: (7205, 7113, 7116, 7106, 7122, 7104, 7123, 7203, 7215, 7201) A&B

Laboratory: AIR TOXICS LTD. Hrs. for Review: 14 hrs

Following are our findings:

*All data is usable and acceptable with the  
qualification described in its attached narrative.  
Richard J. Byrnie*

CC: Cecilia Moore

SDG Number:  
Laboratory: AIR TOXICS LTD

#### 8.INTERNAL STANDARDS

The internal standard area counts and retention times were within the QC limits. Therefore, the results are acceptable.

#### 9.COMPOUND IDENTIFICATION

The target compounds and TICs for the samples were properly identified.

#### 10.COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

The Volatile Target Compounds (TCLs) and Tentative Identified Compounds (TICs) were properly quantitated; therefore, the data are acceptable.

#### 11.SYSTEM PERFORMANCE

GC/MS baseline indicated acceptable performance.

#### 12.ADDITIONAL INFORMATION

Tetrachloroethene for sample 7203 A&B; tetrachloroethene, vinyl chloride and trichloroethene for sample 7113 A&B were quantitated out side the calibration range but no additional dilution was analyzed. The results for tetrachloroethene for sample 7203 A&B; tetrachloroethene, vinyl chloride and trichloroethene for sample 7113 A&B are estimated (J).

Case Number : 9811284  
Site Name: Himco Dump

SDG Number:  
Laboratory: AIR TOXICS LTD

## 1. HOLDING TIME

Ten VOST cartridges samples (7205 A&B, 7113 A&B, 7116 A&B, 7106 A&B, 7122 A&B, 7104 A&B, 7123 A&B, 7203 A&B, 7215 A&B, 7201A&B) were collected on 11/16/98. The lab received the samples on 11/17/98 in good condition on 11/17/98. The samples were analyzed for Volatile analytes (dissolved gases) following SW846 Methods 5041A/8260B.

All sample analyses were performed within the technical holding time of fourteen (14) day after sample collection; therefore, the results are acceptable.

## 2. GC/MS TUNING PERFORMANCE AND GC PERFORMANCE

All GC/MS tuning complied with the mass list and ion abundance criteria for BFB, and all samples were analyzed within the twelve (12) hour periods for instrument performance checks.

## 3. CALIBRATION

Initial and continuing calibration standards of VOA were evaluated for the Target Compounds List (TCLs) and outliers were recorded on the outlier forms included as a part of this narrative.

## 4. METHOD BLANK

9811284-11A, 9811284-11B and 9811284-11C are the method blanks. 9811284-11B contains bromomethane at 11 ng. Bromomethane is not a common laboratory contamination. The present of bromomethane in the associated samples is flagged as non-detected (U) when the sample results are less than 5X the blank result. Please refer to the outlier forms for the list of associated samples.

## 5. SURROGATE RECOVERIES

All samples were analyzed at the dilution and benzene-d<sub>6</sub> was reported as one of the five surrogates. No recovery for Benzene-d<sub>6</sub> was reported for the blanks. No indication in the method or laboratory narrative why benzene-d<sub>6</sub> was reported as surrogate for the diluted samples but not the blanks.

The recovery of 4-bromofluorobenzene of sample 7123 A&B and 1,2-dichloroethane of method blank 9811284-11B were above was above QC limit (78-119%). The positive results for sample in sample 7123 A&B and the blank 9811284-11B should be considered estimated "J", and no qualification for the non-detected.

## 6. LABORATORY CONTROL SAMPLES

The recoveries of acetone, carbon disulfide, 2-butanone and 2-hexanone for the laboratory control sample (LCS) were above the QC limits. No qualification is recommended for the sample results base on the LCS results.

## 7. FIELD BLANK AND FIELD DUPLICATE

There were no sample specified as a field blank or field duplicate in this data

SUBJECT: Review of Data  
Received for Review on 15 APRIL 1999

FROM: Stephen L. Ostrodka, Chief (HSRL-5J) *for Steve Ostrodka*  
Superfund Technical Support Section *Richard L Bynik*

TO: Data User: U.S. ARMY CORPS / ENGS. *5/6/99*

We have reviewed the data for the following case:

SITE NAME: HIMCO DUMP

CASE NUMBER: DACWAS-99-P-009 SDG NUMBER: 7701A & B

Number and Type of Samples: 9 TENAX TUBE DIS. GAS

Sample Numbers: 7701A-B, 7702A-B, 7704A-B, 7710A-B, 7711A-B, 7712A-B,  
7719A-B, 7721A-B, 7724A-B

Laboratory: AIR TOXICS LTD Hrs. for Review: \_\_\_\_\_

Following are our findings:

*The data is usable and acceptable with the  
qualifications described in the attached narrative.

## ORGANIC DATA QUALIFIER DEFINITIONS

For the purpose of defining the flagging nomenclature used in this document, the following code letters and associated definitions are provided:

**VALUE** - when/if the result of a value is greater than or equal to the Contract Required Quantitation Limit (CRQL).

- U** Indicates that the compound was analyzed for, but not detected. The sample quantitation limit corrected for dilution and percent moisture is reported.
- J** Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of a compound where the result is less than the sample quantitation limit, but greater than zero. The flag is also used to indicate a reported result having an associated QC problem.
- R** Indicates the data are unusable. (NOTE: The analyte may or may not be present.)
- N** Indicates presumptive evidence of a compound. This flag is only used for a tentatively identified compound, where the identification is based on a mass spectral library search.
- P** Indicates a pesticide/Aroclor target analyte when there is greater than 25% difference for the detected concentrations between the two GC columns. The lower of the two results is reported.
- C** Indicates pesticide results that have been confirmed by GC/MS.
- B** Indicates the analyte is detected in the associated blank as well as in the sample.
- E** Indicates compounds whose concentrations exceed the calibration range of the instrument.
- D** Indicates an identified compound in an analysis has been diluted. This flag alerts the data user to any differences between the concentrations reported in the two analysis.
- A** Indicates tentatively identified compounds that are suspected to be aldol condensation products.
- G** Indicates the TCLP Matrix Spike Recovery was greater than the upper limit of the analytical method.
- L** Indicates the TCLP Matrix Spike Recovery was less than the lower limit of the analytical method.
- T** Indicates the analyte is found in the associated TCLP extraction blank as well as in the sample.

X,Y,Z are reserved for laboratory defined flags.

## NARRATIVE

Laboratory: @AIR TOXICS LTD.  
Site: HIMCO DUMP

Case: DACW45-99-P-0094  
SDG: 7701 A&B

### 1. HOLDING TIME

Nine (9) VOST cartridge samples, numbered 7701 A&B, 7702 A&B, 7704 A&B, 7710 A&B, 7711 A&B, 7712 A&B, 7719 A&B, 7721 A&B, and 7724 A&B, were collected on December 10, 1998. The lab received the samples on December 11, 1998 in good condition. All samples were analyzed for the full list of volatile organic analytes. All were analyzed according to SWA48 method 5041A/8260B.

The VOA analyses were performed within the technical holding times of 14 days after sample collection; therefore, the results are acceptable.

### 2. GC/MS TUNING AND INSTRUMENT PERFORMANCE

All GC/MS tuning complied with mass list and ion abundance criteria for BFB, and all samples were analyzed within the twelve (12) hour periods for instrument performance checks.

### 3. CALIBRATION

Initial and continuing calibrations of the Volatile standards were evaluated for the target compound list and outliers are recorded on the forms included as part of this narrative.

### 4. BLANKS

Lab Blank is the method and instrument blank associated with this data case in accordance with the analysis method. Lab Blank contained *Bromoform* at 20 ng and no TICs. The presence of *Bromoform* in the samples associated with Lab Blank is flagged as non-detected (U) when the concentration is less than (<) five (5) times the blank result.

### 5. SYSTEM MONITORING COMPOUND AND SURROGATE RECOVERY

The volatile system monitoring compounds were within QC required limits for recovery and retention time; with the exception of:

The recovery of 4-Bromofluorobenzene was out of range high

Case: DACW45-99-P-0094  
SDG: 7701 A&B

Below is a summary of the out-of-control audits and possible effects on the data for this Case/SDG:

Nine (9) VOST cartridge samples, numbered 7701 A&B, 7702 A&B, 7704 A&B, 7710 A&B, 7711 A&B, 7712 A&B, 7719 A&B, 7721 A&B, and 7724 A&B, were collected on December 10, 1998. The lab received the samples on December 11, 1998 in good condition. All samples were analyzed for the full list of volatile organic analytes. All were analyzed according to SWA48 method 5041A/8260B.

The VOA analyses were performed within the technical holding times of 14 days after sample collection; therefore, the results are acceptable.

NARRATIVE

Page 4 of 5

Laboratory: @AIR TOXICS LTD.  
Site: HIMCO DUMP

Case: DACW45-99-P-0094  
SDG: 7701 A&B

In sample 7721 A&B, the value for tetrachloroethene exceeded the calibration range, and there is a possible cartridge overload of the VOST cartridge.

In sample 7724 A&B, the value for tetrachloroethene exceeded the calibration range, and there is a possible cartridge overload of the VOST cartridge.

In sample 7719 A&B, the value for tetrachloroethene and trichloroethene exceeded the calibration range, and there is a probable cartridge overload of the VOST cartridge. The lab reported that the peak for tetrachloroethene saturated the mass spectrometer, the value is therefore basis low.

In sample 7702 A&B, the value for 1,1,1-trichloroethane exceeded the calibration range.

The collection and analysis method does not provide for re-analysis of submitted samples. The use of combined data, from samples 7721 A&B, 7724 A&B, 7719 A&B and 7702 A&B for POHC or DRE calculations, would be questionable.

In sample 7704 A&B the value for bromoform should be 14 U.

Case: DACW45-99-P-0094  
SDG: 7701 A&B

in sample 7721 A&B, and the LCS. Therefore, positive results for the above noted samples are estimated (J); non-detects are not qualified.

### 6. LABORATORY CONTROL SAMPLE

All spike recoveries were within QC limits, with the exception of the recovery of Chlorobenzene which was out of range high.

### 7. FIELD BLANK AND FIELD DUPLICATE

There was no field blank or field duplicate pair submitted with this case. The required sampling method is not conducive to generating field duplicates; therefore, the data is of acceptable quality.

### 8. INTERNAL STANDARDS

The internal standards' retention times and area counts for the VOA fraction were all within the required QC limits; therefore the results are acceptable.

### 9. COMPOUND IDENTIFICATION

Target compounds (TCLs) and Tentatively Identified Compounds (TICs) were identified using a "best fit" library search method. The lab also included the quality of spectrum matches for the TICs reported.

### 10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

All samples were VOST cartridges. All VOAs target CRQLs were properly reported. All target compound quantitation was properly reported. All results were reported as total ng present.

### 11. SYSTEM PERFORMANCE

The GC/MS baseline indicated acceptable performance.

NARRATIVE

LABORATORY: AIR TOXICS LTD.

PRP CASE

SITE NAME: Hinco Dump Superfund Site

SDG: 7210A/B

Below is a summary of the out-of-control audits and the possible effect on the data for this case:

This review covers six VOST cartridges samples numbered:7210A/7210B, 7208A/7208B, 7212A/7212B, 7220A/7220B, 7204A/7204B and 7218A/7218B collected on 11/11/98. An Environmental Analytical Laboratory Air Toxics LTD of Folsom CA, received the samples on 11/12/98 in good condition. The samples were analyzed for Volatiles (dissolved gases) following SW846 Methods 5041A/8260B.

All sample analysis were performed within the technical holding time of fourteen (14) day after sample collection; therefore, the results are acceptable.

Sample 7208A/7208B could be not desorbed and analyzed due to heavy matrix (thick black liquid).

The reviewer's narrative and data qualifiers are noted in the following pages.

TO: Data User: U.S. Army Corps of Engs

We have reviewed the data for the following case:

SITE NAME: Hinco Dump Superfund Site

CASE NUMBER: PRP SDG NUMBER: 7210A/B

Number and Type of Samples: 6 (cartridges)

Sample Numbers: 7210A/B, 7209A/B, 7212A/B, 7220A/B, 7204A/B, 7218A/B

Laboratory: Air TOXICS Ltd Hrs. for Review: 9

Following are our findings:

*The data is useable and acceptable with the  
qualifications described in the attached narrative

## 7.FIELD BLANK AND FIELD DUPLICATE

There were no sample specified as a field blank or field duplicate in this data

## 8.INTERNAL STANDARDS

The internal standards area counts for 1,4-Dichlorobenzene-d4 was below the QC limit in sample 7212A/7212B.

The positive results for the target compounds which are associated with 1,4-Dichlorobenzene-d4 for sample 7212A/7212B should be considered estimated "J", and non-detected quantitation limits should be considered estimated "UJ".

Please, refer to Table 4 for the list of associated compounds for 1,4-Dichlorobenzene-d4.

## 9.COMPOUND IDENTIFICATION

The target compounds and TICs for the Volatile fractions were correctly identified.

## 10.COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

The Volatile Target Compounds (TCLs) and Tentative Identified Compounds (TICs) were properly quantitated; therefore, the data are acceptable.

## 11.SYSTEM PERFORMANCE

GC/MS baseline indicated acceptable performance.

## 12.ADDITIONAL INFORMATION

Target compound Tetrachloroethane exceeded the calibration range in sample 7210A/7210B. This sample was not reanalyzed.

SDG: 7210A/B

## 1. HOLDING TIME

Six VOST cartridges samples numbered: 7210A/7210B, 7208A/7208B, 7212A/7212B, 7220A/7220B, 7204A/7204B and 7218A/7218B were collected on 11/11/98. An Environmental Analytical Laboratory Air Toxics LTD of Folsom CA, received the samples on 11/12/98 in good condition. The samples were analyzed for Volatiles (dissolved gases) following SW846 Methods 5041A/8260B.

All sample analysis were performed within the technical holding time of fourteen (14) day after sample collection; therefore, the results are acceptable.

## 2. GC/MS TUNING PERFORMANCE AND GC PERFORMANCE

All GC/MS tuning complied with the mass list and ion abundance criteria for BFB, and all samples were analyzed within the twelve (12) hour periods for instrument performance checks.

## 3. CALIBRATION

Initial and continuing calibration standards of Volatile were evaluated for the Target Compounds List (TCLs) and outliers were recorded on the outlier forms included as a part of this narrative.

## 4. METHOD BLANK

The Volatile Laboratory Blank was clean; therefore, the results are

## 5. SURROGATE RECOVERIES

Surrogate 4-Bromofluorobenzene in sample 7212A/7212B (211%) was above QC limit (78-119%). Positive Volatile results in sample 7212A/7212B should be considered estimated "J", non-detected do not need qualification.

## 6. LABORATORY CONTROL SAMPLES

All spike recoveries in the laboratory control sample LCS QCSP were within the QC limits; therefore, the results are acceptable.

## ORGANIC DATA QUALIFIER DEFINITIONS

For the purpose of defining the flagging nomenclature used in this document, the following code letters and associated definitions are provided:

**VALUE** - when/if the result of a value is greater than or equal to the Contract Required Quantitation Limit (CRQL).

- U** Indicates that the compound was analyzed for, but not detected. The sample quantitation limit corrected for dilution and percent moisture is reported.
- J** Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of a compound where the result is less than the sample quantitation limit, but greater than zero. The flag is also used to indicate a reported result having an associated QC problem.
- R** Indicates the data are unusable. (NOTE: The analyte may or may not be present.)
- N** Indicates presumptive evidence of a compound. This flag is only used for a tentatively identified compound, where the identification is based on a mass spectral library search.
- P** Indicates a pesticide/Aroclor target analyte when there is greater than 25% difference for the detected concentrations between the two GC columns. The lower of the two results is reported.
- C** Indicates pesticide results that have been confirmed by GC/MS.
- B** Indicates the analyte is detected in the associated blank as well as in the sample.
- E** Indicates compounds whose concentrations exceed the calibration range of the instrument.
- D** Indicates an identified compound in an analysis has been diluted. This flag alerts the data user to any differences between the concentrations reported in the two analysis.
- A** Indicates tentatively identified compounds that are suspected to be aldol condensation products.
- G** Indicates the TCLP Matrix Spike Recovery was greater than the upper limit of the analytical method.
- L** Indicates the TCLP Matrix Spike Recovery was less than the lower limit of the analytical method.
- T** Indicates the analyte is found in the associated TCLP extraction blank as well as in the sample.

X,Y,Z are reserved for laboratory defined flags.

SUBJECT: Review of Data

Received for Review on 15 APRIL 1999

FROM: Stephen L. Ostrodka, Chief (HSRL-5J)  
Superfund Technical Support Section

*for Steve Ostrodka  
Michael J. Byrnie  
5/6/99*

TO: Data User: U.S. ARMY CORPS of ENGS.

We have reviewed the data for the following case:

SITE NAME: HIMCO DUMP

CASE NUMBER: DACW45-99-P-0094 SDG NUMBER: 7703A & B

Number and Type of Samples: 5 TENAX Tube AIR DIS. GAS

Sample Numbers: 7703A & B, 7705A & B, 7706A & B, 7708A & B and 7709A & B

Laboratory: AIR TOXICS LTD Hrs. for Review: \_\_\_\_\_

Following are our findings:

*The data is useful and acceptable with the  
qualifications described in the attached narrative  
Michael J. Byrnie*

## NARRATIVE

Contractor: Air Toxics Ltd  
Site: Himco Dump (IN)

Case #:DACW45-99-P-0094  
SDG: 7703 A&B

**1.HOLDING TIMES**

This case consists of 5 VOST samples 7703 A&B, 7705 A&B, 7706 A&B, 7708 A&B, and 7709 A&B. According to the laboratory COC these samples were sampled on December 9, 1998 and were received by the laboratory on December 10, 1998, no field COC was part of this case. This case was completed on December 15, 1998, thus meeting holding time requirements. All samples were analyzed for volatiles (dissolved gases). All samples were analyzed according to SW 846 methods 5041A/8260B.

**2.GC/MS TUNING**

All volatile GC/MS tuning complied with the mass list and ion abundance criteria for BFB, and all samples were analyzed within the 12 hour periods for instrument performance checks, therefore all results are acceptable.

**3.CALIBRATION**

Initial and continuing calibrations of the volatiles standards were evaluated for the specified target compound list and outliers are recorded on the forms included as part of the narrative.

**4.BLANKS**

The volatile low level Lab Blank contained the chemical bromoform 25 ng, and contained no TICs. The presence of bromoform in the samples associated with this Lab Blank is flagged "U" when the sample results is less than five (5) times the blank concentration.

**5.SURROGATE RECOVER**

The volatile surrogate compound 1,2dichloroethane-d4 was high and out of QC limits in samples 7705 A&B, 7701 A&B, 7708 A&B, 7709 A&B, Lab Blank, and LCS. In these samples positive detects are estimated (J) and nondetects need no qualification. Volatile surrogate 4-bromofluorobenzene was high and out of QC limits in sample 7708 A&B. As this sample is already qualified above no further qualification is needed.

**6.LCS**

The LCS that was run with this set had high % recoveries for acetone, carbon disulfide, and 2-hexanone. No qualification of the data is done based on LCS recoveries.

**7.FIELD BLANKS AND FIELD DUPLICATES**

None were listed on the COC.

**8.INTERNAL STANDARDS**

The volatile internal standards for the low level analysis were within the laboratories QC limits for all samples, therefore, the results are acceptable.

**9.COMPOUND IDENTIFICATION**

After reviewing the mass spectra it appears that all VOA compounds were properly identified.

**10.COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS**

All CRQLs were properly reported and a bag dilution was performed on sample 7705 A&B to screen the samples. All target compounds and TICs appear to be properly reported.

**11.SYSTEM PERFORMANCE**

GC/MS baselines indicated acceptable performance.

**12.ADDITIONAL INFORMATION**

None.

J/R = All positive results are estimated "J" and non-detected results are unusable "R"

- = These flags should be applied to the analytes on the sample data sheets.
- # = Minimum Relative Response Factor

## ORGANIC DATA QUALIFIER DEFINITIONS

For the purpose of defining the flagging nomenclature used in this document, the following code letters and associated definitions are provided:

**VALUE** - when/if the result of a value is greater than or equal to the Contract Required Quantitation Limit (CRQL).

- U** Indicates that the compound was analyzed for, but not detected. The sample quantitation limit corrected for dilution and percent moisture is reported.
- J** Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of a compound where the result is less than the sample quantitation limit, but greater than zero. The flag is also used to indicate a reported result having an associated QC problem.
- R** Indicates the data are unusable. (NOTE: The analyte may or may not be present.)
- N** Indicates presumptive evidence of a compound. This flag is only used for a tentatively identified compound, where the identification is based on a mass spectral library search.
- P** Indicates a pesticide/Aroclor target analyte when there is greater than 25% difference for the detected concentrations between the two GC columns. The lower of the two results is reported.
- C** Indicates pesticide results that have been confirmed by GC/MS.
- B** Indicates the analyte is detected in the associated blank as well as in the sample.
- E** Indicates compounds whose concentrations exceed the calibration range of the instrument.
- D** Indicates an identified compound in an analysis has been diluted. This flag alerts the data user to any differences between the concentrations reported in the two analysis.
- A** Indicates tentatively identified compounds that are suspected to be aldol condensation products.
- G** Indicates the TCLP Matrix Spike Recovery was greater than the upper limit of the analytical method.
- L** Indicates the TCLP Matrix Spike Recovery was less than the lower limit of the analytical method.
- T** Indicates the analyte is found in the associated TCLP extraction blank as well as in the sample.

X,Y,Z are reserved for laboratory defined flags.

SUBJECT: Review of Data  
Received for Review on \_\_\_\_\_

FROM: Stephen L. Ostrodka, Chief (HSRL-5J)  
Superfund Technical Support Section

*per Steve Ostrodka  
Michael J. Dyrnik  
5/6/99*

TO: Data User: U.S. Army Corps of Engineers

We have reviewed the data for the following case:

SITE NAME: Himco Dump (Indiana)

CASE NUMBER: DACW 45-99-P-0094 SDG NUMBER: 711A+B

Number and Type of Samples: 5 sorbent cartridges with air samples

Sample Numbers: 711A+B, 7207A+B, 7214A+B, 7213A+B, 7114A+B

Laboratory: Air Toxics Ltd (CA) Hrs. for Review: 11.5

Following are our findings:

*the data is usable and acceptable with  
the qualifications described in the attached narrative*

*Michael J. Dyrnik*

CC: Cecilia Moore  
Region 5 TPO  
Mail Code: SM-5J

## NARRATIVE

LABORATORY: Air Toxics Ltd. (CA) PRP PROJECT # DACW45-99-P-0094  
SITE NAME: Himco Dump (Indiana) SDG: 7111A&B

Below is a summary of the out-of-control audits and the possible effect on the data for this case:

This PRP case is the analytical results of five sorbent cartridges containing air samples from the Himco Dump site in Omaha, NE (7111A&B, 7207A&B, 7214A&B, 7213A&B and 7114A&B). The samples were collected on 11/17/98, and Air Toxics Ltd. of Folsom, CA received the samples on 11/18/98 in good condition. The samples were collected according to SW-846 Method 5041A (Analysis for Desorption of Sorbent Cartridges from Volatile Organic Sampling Train) and analyzed by Method 8260B on 11/30/98 for selected volatile analytes (VOCs). The samples were analyzed within fourteen days from collection; therefore, their holding time results are acceptable.

Sample results are reported with units of nanograms (ng).

Matrix spike analyses are not applicable to these types of samples. A Laboratory Control Sample (LCS) was spiked with VOCs, and the raw data were submitted with this case.

According to the sample information submitted with this case, field blanks and field duplicates were not submitted.

The reviewer's narrative and data qualifiers are noted in the following pages.

## NARRATIVE

LABORATORY: Air Toxics Ltd. (CA) PRP PROJECT # DACW45-99-P-0094  
SITE NAME: Himco Dump (Indiana) SDG: 7111A&B

**1. HOLDING TIMES**

The five sorbent cartridges samples of this PRP case are: 7111A&B, 7207A&B, 7214A&B, 7213A&B and 7114A&B. The air samples were collected on 11/17/98, and Air Toxics Ltd. of Folsom, CA received them on 11/18/98 in good condition. The samples were collected according to SW-846 Method 5041A (Analysis for Desorption of Sorbent Cartridges from Volatile Organic Sampling Train) and analyzed by Method 8260B on 11/30/98 for selected volatile analytes (VOCs). The samples were analyzed within fourteen days from collection; therefore, their holding time results are acceptable.

**2. GC INSTRUMENT PERFORMANCE CHECKS**

All GC/MS instrument performance checks for BFB complied with their mass list and ion abundance criteria, and all samples were analyzed within the twelve-hour periods for instrument performance checks.

**3. CALIBRATIONS**

The initial calibration and the continuing calibration check standard were evaluated for the Target Compounds List (TCLs).

All samples were quantitated based on the calibration factors obtained from the initial calibrations.

**4. METHOD BLANKS**

No target analytes or TICs were detected in the Method Blank of 11/30/98.

No other blank data were submitted in this case.

**5. SURROGATE RECOVERIES**

The volatile system monitoring compounds were within the QC limits for all samples.

## NARRATIVE

LABORATORY: Air Toxics Ltd. (CA) PRP PROJECT # DACW45-99-P-0094  
SITE NAME: Himco Dump (Indiana) SDG: 7111A&B

#### 6. MATRIX SPIKE/SPIKE DUPLICATES AND LABORATORY CONTROL SPIKE (LCS)

Matrix spike analyses are not applicable for these samples.

In the LCS sample of 11/25/98, four compounds (acetone, carbon disulfide, 2-butanone and 4-methyl-2-pentanone) had recoveries which exceeded 150%. Positive results of these four compounds in any of the associated samples should be qualified with a "J" (estimated concentration).

#### 7. FIELD BLANKS AND FIELD DUPLICATES

Field blanks and field duplicates were not submitted.

#### 8. INTERNAL STANDARDS

The internal standards areas and retention times of the volatile and semivolatile samples were within the QC limits.

#### 9. COMPOUND IDENTIFICATION

##### Sample 7111A&B

The mass spectrum of carbon disulfide shows the presence of iodomethane and a Freon. The Laboratory should indicate if the concentrations of these compounds are high enough to be reported.

##### Sample 7207A&B

1,2-Dichloroethane should not have been reported in this sample because the submitted mass spectrum indicates a cycloalkane.

The mass spectrum of vinyl chloride shows the presence of chlorofluoromethane and an alkane. The mass spectrum of chloroethane shows the presence of a TIC with an ion at m/z 60. The mass spectrum of carbon disulfide shows the presence of Freon 113 (1,1,2-trichloro-1,2,2-trifluoroethane). The mass spectrum of toluene shows the presence of a cycloalkane. The Laboratory should indicate if the concentrations of these compounds are high enough to be reported.

## NARRATIVE

LABORATORY: Air Toxics Ltd. (CA) PRP PROJECT # DACW45-99-P-0094  
SITE NAME: Himco Dump (Indiana) SDG: 7111A&B

Sample 7214A&B

The TIC which elutes at 9.24 minutes should have been called an unknown alkane, not octyl trifluoroacetate.

The mass spectrum of chloroethane shows the presence of a TIC with an ion at  $m/z$  60. The mass spectrum of carbon disulfide shows the presence of a Freon. The mass spectrum of *trans*-1,2-dichloroethene shows the presence of a TIC (possibly hexane). The mass spectrum of *m/p*-xylene shows the presence of an alkyl-substituted cycloalkane. The Laboratory should indicate if the concentrations of these compounds are high enough to be reported.

Sample 7213A&B

The mass spectra of vinyl chloride shows the presence of a chlorofluoromethane and another TIC (possibly butane or 2-methylpropane). The mass spectrum of bromomethane shows the presence of a TIC with an ion at  $m/z$  73. The Laboratory should indicate if the concentrations of these compounds are high enough to be reported.

The TIC which elutes at 0.84 minutes may have been called propane or an unknown TIC, but it should not have been labeled as 2-butenal due to a poor match with the reference spectrum.

Sample 7114A&B

The mass spectra of vinyl chloride and chloroethane each show the presence of a Freon. The mass spectrum of *trans*-1,2-dichloroethene shows the presence of a TIC (possibly hexane). The Laboratory should indicate if the concentrations of these compounds are high enough to be reported.

Except for 1,2-dichloroethane in sample 7207A&B (noted above), all target compounds were correctly identified.

**10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS**

The volatile target compounds (TCLs) in all samples were properly quantitated. The CRQLs were adjusted to reflect all sample dilutions.

**CALIBRATION OUTLIERS  
VOLATILE TCL COMPOUNDS**

Reviewer's Init/Date: ag 4/16/99

J/R = All positive results are estimated "J" and non-detected results are unusable "R"  
 \* = These flags should be applied to the analytes on the sample data sheets.  
 # = Minimum Relative Response Factor

## ORGANIC DATA QUALIFIER DEFINITIONS

For the purpose of defining the flagging nomenclature used in this document, the following code letters and associated definitions are provided:

VALUE - when/if the result of a value is greater than or equal to the Contract Required Quantitation Limit (CRQL).

- U Indicates that the compound was analyzed for, but not detected. The sample quantitation limit corrected for dilution and percent moisture is reported.
- J Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of a compound where the result is less than the sample quantitation limit, but greater than zero. The flag is also used to indicate a reported result having an associated QC problem.
- R Indicates the data are unusable. (NOTE: The analyte may or may not be present.)
- N Indicates presumptive evidence of a compound. This flag is only used for a tentatively identified compound, where the identification is based on a mass spectral library search.
- P Indicates a pesticide/Aroclor target analyte when there is greater than 25% difference for the detected concentrations between the two GC columns. The lower of the two results is reported.
- C Indicates pesticide results that have been confirmed by GC/MS.
- B Indicates the analyte is detected in the associated blank as well as in the sample.
- E Indicates compounds whose concentrations exceed the calibration range of the instrument.
- D Indicates an identified compound in an analysis has been diluted. This flag alerts the data user to any differences between the concentrations reported in the two analysis.
- A Indicates tentatively identified compounds that are suspected to be aldol condensation products.
- G Indicates the TCLP Matrix Spike Recovery was greater than the upper limit of the analytical method.
- L Indicates the TCLP Matrix Spike Recovery was less than the lower limit of the analytical method.
- T Indicates the analyte is found in the associated TCLP extraction blank as well as in the sample.

X,Y,Z are reserved for laboratory defined flags.

**LABORATORY NARRATIVE**  
**Analysis of Volatile Organic Compounds in VOST Cartridges**  
**by EPA 5041A/8260B**  
**U.S. Army Corps of Engineers**  
**Work Order #9811144**

Four Tenax and Tenax/charcoal tube pairs (VOST cartridges) were received on November 10, 1998. The sacrificial temperature check vial was not provided with the shipment, therefore the actual temperature of the shipment was not recorded. The samples were received on ice and therefore their integrity is not in question. The laboratory performed the analysis via EPA SW-846 Method 5041A using GC/MS in the full scan mode. The method involves thermal desorption of the VOST cartridges for 11 min. at 180° C using an inert gas. The gas stream is then bubbled through 5 mL of organic free water and trapped on the sorbent trap of the purge and trap system. The trap is thermally desorbed to elute the components into the GC system for further separation. See the data sheets for the reporting limits for each compound.

Bag dilution was performed on sample 7115A, 7115B for screening purposes. Internal standard recoveries of chlorobenzene-d5 and 1,4-dichlorobenzene-d4 were slightly outside QC limits for sample 7115A, 7115B.

There were no other out of the ordinary circumstances to report.

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:

- B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
- J - Estimated Value.
- E - Exceeds instrument calibration range.
- S - Saturated Peak.
- Q - Exceeds quality control limits.
- U - Compound analyzed for but not detected above the detection limit.
- N - The identification is based on presumptive evidence.

AN ENVIRONMENTAL ANALYTICAL LABORATORY

## WORK ORDER #: 9811212

### Work Order Summary

**CLIENT:** Mr. Steve Peterson  
U.S. Army Corps of Engineers  
215 N. 17th Street, Zorinsky Bldg.  
Omaha, NE 68102-4978

**BILL TO:** Same

**PHONE:** 402-221-7183  
**FAX:** 402-221-7769  
**DATE RECEIVED:** 11/12/98  
**DATE COMPLETED:** 12/1/98

**P.O. #** NR  
**PROJECT #** Himco Dump Superfund Site

| <u>FRACTION #</u> | <u>NAME</u> | <u>TEST</u>            |

**LABORATORY NARRATIVE**  
**Analysis of Volatile Organic Compounds in VOST Cartridges**  
**by EPA 5041A/8260B**  
**U.S. Army Corps of Engineers**  
**Work Order #9811212**

Six Tenax and Tenax/charcoal tube pairs (VOST cartridges) were received on November 12, 1998. The sacrificial temperature check vial was not provided with the shipment, therefore the actual temperature of the shipment was not recorded. The samples were received on ice and therefore their integrity is not in question. The laboratory performed the analysis via EPA SW-846 Method 5041A using GC/MS in the full scan mode. The method involves thermal desorption of the VOST cartridges for 11 min. at 180° C using an inert gas. The gas stream is then bubbled through 5 mL of organic free water and trapped on the sorbent trap of the purge and trap system. The trap is thermally desorbed to elute the components into the GC system for further separation. See the data sheets for the reporting limits for each compound.

Bag dilution was performed on sample 7210A,7210B to screen the sample. Sample 7208A,7208B contained a thick black liquid therefore it could not be desorbed and analyzed. For samples 7212A and 7212B, the internal standard recovery of 1,4 DCB-d4 and surrogate recovery of BFB were outside QC limits possibly due to matrix interference. Reanalysis to confirm matrix effect is not possible for VOST tube samples.

There were no other out of the ordinary circumstances to report.

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:

- B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
- J - Estimated Value.
- E - Exceeds instrument calibration range.
- S - Saturated Peak.
- Q - Exceeds quality control limits.
- U - Compound analyzed for but not detected above the detection limit.
- N - The identification is based on presumptive evidence.

**LABORATORY NARRATIVE**  
**Analysis of Volatile Organic Compounds in VOST Cartridges**  
**by EPA 5041A/8260B**  
**U.S. Army Corps of Engineers**  
**Work Order #9811253**

Five Tenax and Tenax/charcoal tube pairs (VOST cartridges) were received on November 13, 1998. The sacrificial temperature check vial was not provided with the shipment, therefore the actual temperature of the shipment was not recorded. The samples were received on ice and therefore their integrity is not in question. The laboratory performed the analysis via EPA SW-846 Method 5041A using GC/MS in the full scan mode. The method involves thermal desorption of the VOST cartridges for 11 min. at 180° C using an inert gas. The gas stream is then bubbled through 5 mL of organic free water and trapped on the sorbent trap of the purge and trap system. The trap is thermally desorbed to elute the components into the GC system for further separation. See the data sheets for the reporting limits for each compound.

Bag dilutions were performed on all the samples due to uncertainty of analyte concentrations.

Sample 7121A&B is reported for less compounds than the required target list due to a system malfunction aborting the sample run after only 16 minutes.

The daily calibration check analyzed on November 22, 1998 was slightly out of the CCC criteria for 1,1-dichloroethene; analysis proceeded since bag dilution hold times were approaching expiration. A new ICAL was performed before any further sample analysis.

There were no other out of the ordinary circumstances to report.

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:

- B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
- J - Estimated Value.
- E - Exceeds instrument calibration range.
- S - Saturated Peak.
- Q - Exceeds quality control limits.
- U - Compound analyzed for but not detected above the detection limit.
- N - The identification is based on presumptive evidence.

**LABORATORY NARRATIVE**  
**Analysis of Volatile Organic Compounds in VOST Cartridges**  
**by EPA 5041A/8260B**  
**U.S. Army Corps of Engineers**  
**Work Order #9811263**

Eight Tenax and Tenax/charcoal tube pairs (VOST cartridges) were received on November 14, 1998. The sacrificial temperature check vial was not provided with the shipment, therefore the actual temperature of the shipment was not recorded. The samples were received on ice and therefore their integrity is not in question. The laboratory performed the analysis via EPA SW-846 Method 5041A using GC/MS in the full scan mode. The method involves thermal desorption of the VOST cartridges for 11 min. at 180° C using an inert gas. The gas stream is then bubbled through 5 mL of organic free water and trapped on the sorbent trap of the purge and trap system. The trap is thermally desorbed to elute the components into the GC system for further separation. See the data sheets for the reporting limits for each compound.

Samples 7217A&B and 7102A&B were analyzed directly as tube samples. Sample 7102A&B was heavily loaded with target analytes as well as nontarget analytes. Data is "E" and "S" flagged. Bag dilutions were performed on other six samples.

There were no other out of the ordinary circumstances to report.

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:

- B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
- J - Estimated Value.
- E - Exceeds instrument calibration range.
- S - Saturated Peak.
- Q - Exceeds quality control limits.
- U - Compound analyzed for but not detected above the detection limit.
- N - The identification is based on presumptive evidence.

AN ENVIRONMENTAL ANALYTICAL LABORATORY

## WORK ORDER #: 9811284

### Work Order Summary

**CLIENT:** Mr. Steve Peterson  
U.S. Army Corps of Engineers  
215 N. 17th Street, Zorinsky Bldg.  
Omaha, NE 68102-4978

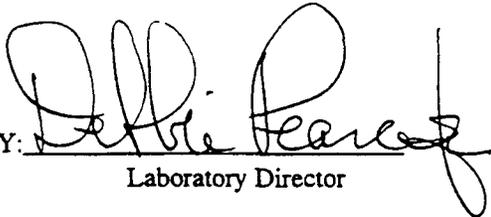

**BILL TO:** Same

**PHONE:** 402-221-7183  
**FAX:** 402-221-7769  
**DATE RECEIVED:** 11/17/98  
**DATE COMPLETED:** 12/04/98

**P.O. #** NR  
**PROJECT #** DACW45-99-P-0094 Himco Dump

**LABORATORY NARRATIVE**  
**Analysis of Volatile Organic Compounds in VOST Cartridges**  
**by EPA 5041A/8260B**  
**U.S. Army Corps of Engineers**  
**Work Order #9811313**

Five Tenax and Tenax/charcoal tube pairs (VOST cartridges) were received on November 18, 1998. The sacrificial temperature check vial was not provided with the shipment, therefore the actual temperature of the shipment was not recorded. The samples were received on ice and therefore their integrity is not in question. The laboratory performed the analysis via EPA SW-846 Method 5041A using GC/MS in the full scan mode. The method involves thermal desorption of the VOST cartridges using an inert gas. The gas stream is then bubbled through 5 mL of organic free water and trapped on the sorbent trap of the purge and trap system. The trap is thermally desorbed to elute the components into the GC system for further separation. See the data sheets for the reporting limits for each compound.

Recovery of the LCS compound 11-DCE was slightly lower than the advisory QC limits of 70-130% in LCS analyzed on Nov 11, 1998.

Due to uncertainty of analyte concentrations, bag dilution was performed on all the samples.

There were no other out of the ordinary circumstances to report.

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:

- B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
- J - Estimated Value.
- E - Exceeds instrument calibration range.
- S - Saturated Peak.
- Q - Exceeds quality control limits.
- U - Compound analyzed for but not detected above the detection limit.
- N - The identification is based on presumptive evidence.

**LABORATORY NARRATIVE**  
**Analysis of Volatile Organic Compounds in VOST Cartridges**  
**by EPA 5041A/8260B**  
**U.S. Army Corps of Engineers**  
**Work Order #9812153**

Five Tenax and Tenax/charcoal tube pairs (VOST cartridges) were received on December 10, 1998. The sacrificial temperature check vial was not provided with the shipment, therefore the actual temperature of the shipment was not recorded. The samples were received on ice and therefore their integrity is not in question. The laboratory performed the analysis via EPA SW-846 Method 5041A using GC/MS in the full scan mode. The method involves thermal desorption of the VOST cartridges for 11 min. at 180° C using an inert gas. The gas stream is then bubbled through 5 mL of organic free water and trapped on the sorbent trap of the purge and trap system. The trap is thermally desorbed to elute the components into the GC system for further separation. See the data sheets for the reporting limits for each compound.

Bromomethane was detected in the laboratory blank. The "B" flag was applied to the associated results.

Bag dilution was performed on the first sample 7705A&B to screen the sample.

Recovery of the surrogate compound 1,2-Dichloroethane-d4 was slightly above the laboratory established limits of 69-112% in the following samples: 7705 A&B, 7703 A&B, 7708 A&B, 7709 A&B, Lab Blank and LCS. Surrogate recovery of 4-Bromofluorobenzene was above the laboratory established limit of 78-119% in sample 7708 A&B.

There were no other out of the ordinary circumstances to report.

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:

- B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
- J - Estimated Value.
- E - Exceeds instrument calibration range.
- S - Saturated Peak.
- Q - Exceeds quality control limits.
- U - Compound analyzed for but not detected above the detection limit.
- N - The identification is based on presumptive evidence.

AN ENVIRONMENTAL ANALYTICAL LABORATORY

## WORK ORDER #: 9812185

### Work Order Summary

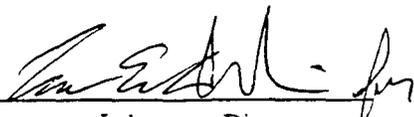

**CLIENT:** Mr. Steve Peterson  
 U.S. Army Corps of Engineers  
 215 N. 17th Street, Zorinsky Bldg.  
 Omaha, NE 68102-4978

**BILL TO:** Same

**PHONE:** 402-221-7183  
**FAX:** 402-221-7769  
**DATE RECEIVED:** 12/11/98  
**DATE COMPLETED:** 12/16/98

**P.O. # NR**  
**PROJECT # DACW45-99-P-0094 Himco Dump**

**LABORATORY NARRATIVE**  
**Analysis of Volatile Organic Compounds in VOST Cartridges**  
**by EPA 5041A/8260B**  
**U.S. Army Corps of Engineers**  
**Work Order #9812185**

Nine Tenax and Tenax/charcoal tube pairs (VOST cartridges) were received on December 11, 1998. The sacrificial temperature check vial was not provided with the shipment, therefore the actual temperature of the shipment was not recorded. The samples were received on ice and therefore their integrity is not in question. The laboratory performed the analysis via EPA SW-846 Method 5041A using GC/MS in the full scan mode. The method involves thermal desorption of the VOST cartridges for 11 min. at 180° C using an inert gas. The gas stream is then bubbled through 5 mL of organic free water and trapped on the sorbent trap of the purge and trap system. The trap is thermally desorbed to elute the components into the GC system for further separation. See the data sheets for the reporting limits for each compound.

Recovery of the surrogate compound 4-Bromofluorobenzene was slightly above the laboratory established limits of 78-119% in sample 7721 A&B and LCS. Re-analysis to confirm matrix effects is not possible for VOST tube samples.

Recovery of the LCS compound Chlorobenzene was 131%, slightly above the advisory QC limits of 70-130% .

Bromomethane was detected in the laboratory blank. The "B" flag was applied to the associated results.

There were no other out of the ordinary circumstances to report.

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:

- B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
- J - Estimated Value.
- E - Exceeds instrument calibration range.
- S - Saturated Peak.
- Q - Exceeds quality control limits.
- U - Compound analyzed for but not detected above the detection limit.
- N - The identification is based on presumptive evidence.

**LABORATORY NARRATIVE**  
**Analysis of Volatile Organic Compounds in VOST Cartridges**  
**by EPA 5041A/8260B**  
**U.S. Army Corps of Engineers**  
**Work Order #9812208**

Six Tenax and Tenax/charcoal tube pairs (VOST cartridges) were received on December 12, 1998. The sacrificial temperature check vial was not provided with the shipment, therefore the actual temperature of the shipment was not recorded. The samples were received on ice and therefore their integrity is not in question. The laboratory performed the analysis via EPA SW-846 Method 5041A using GC/MS in the full scan mode. The method involves thermal desorption of the VOST cartridges for 11 min. at 180° C using an inert gas. The gas stream is then bubbled through 5 mL of organic free water and trapped on the sorbent trap of the purge and trap system. The trap is thermally desorbed to elute the components into the GC system for further separation. See the data sheets for the reporting limits for each compound.

Bromomethane was detected in the laboratory blank. The "B" flag was applied to the associated results.

Recovery of the surrogate compound 1,2-Dichloroethane-d4 was slightly above the laboratory established limits of 69-112% in samples 7714 A&B and 7720 A&B. Recovery of the surrogate compound 4-Bromofluorobenzene was above the laboratory established limits of 78-119% in sample 7714 A&B, possibly due to matrix effect. Re-analysis to confirm matrix effects is not possible for VOST tube samples.

There were no other out of the ordinary circumstances to report.

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:

- B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
- J - Estimated Value.
- E - Exceeds instrument calibration range.
- S - Saturated Peak.
- Q - Exceeds quality control limits.
- U - Compound analyzed for but not detected above the detection limit.
- N - The identification is based on presumptive evidence.

**Quality Control Summary Tables**  
**1999 Soil Gas and 2000 Ground Water Analytical Results**

Sample 11020 (location TT-84) was lost during analysis when the mass spectrometer filament broke.

Cartridge 11021A (TT-61) was analyzed with cartridge 11009B (TT-54) while 11009A (TT-54) and 11021B (TT-61) were analyzed independently. The contaminants detected in the pair 11021A/11009B can likely be attributed to location TT-61. The rationale behind this reasoning lies in the sample collection method. During collection, the soil gas was drawn through sorbent tube "A" before passing through tube "B". At those locations with high concentrations tube "A" would saturate with the residual passing to sorbent tube "B". The sorbent tube from location TT-54 demonstrated only a trace of toluene and carbon disulfide. All other compounds were nondetect. If the levels reported in the pair 11021A/11009B were from location TT-54 the concentrations in the analysis of sorbent tube "A" from that location would have been higher than observed in the pair which contained the residual portion of the sampling. Further supporting this is the concentration of residual tetrachloroethene reported in sorbent tube 11021B (TT-61). Similar relationships are noted among the other contaminants reported. The impact to the data is in the estimation of the concentration detected and not the presence or absence. The corresponding detections have been qualified "J".

Concentrations That Exceed The Calibration Range - The following sample locations contain target analytes at concentrations that exceed the calibration range or saturated the detector. The nature of the matrix combined with the collection and analysis method does not provide for reanalysis of these samples. All applicable results have been qualified "E".

- TT-56, TT-62, TT-63, and TT-64

#### **4.0 Conclusions**

##### **4.1 Data Adequacy**

The data met the data quality objectives for precision, accuracy, representativeness, comparability and completeness and is adequate for the intended. Review of the sample handling and analysis shows that the sample quality has not been negatively impacted by field or lab procedures. Qualifiers have been applied to the results to convey limitations of the analytical results. There are a few instances where data is unusable and those are qualified as rejected "R".

##### **4.2. Restrictions on Data Use**

There are no restrictions on the data use.

No target analytes or TICs were detected in the method blanks.

### 3.2.4 Surrogate and Internal Standard Recoveries

- Sample 11003A&B (location TT-56) had high recoveries for three surrogates and a low recovery for one surrogate. The three internal standards were also out of control on the low side. All detections have been qualified "J" while the nondetections have been qualified "UJ".
- Sample 11107A&B (TT-62) toluene-d8 and 4-bromofluorobenzene surrogate recoveries and chlorobenzene-d5 internal standard recovery were outside QC criteria. All detections have been qualified "J" while the nondetections have been qualified "UJ".
- In sample 11225A&B (TT-78) the recovery of bromofluorobenzene was high. All detections in this sample have been qualified "J".
- In sample 11210A&B (TT-79) the internal standard 1,4-Dichlorobenzene-d4 was out of control low. All detections have been qualified "J" while the nondetections have been qualified "UJ".
- In sample 11215A&B (TT-86) the chlorobenzene-d5 and 1,4-dichlorobenzene-d4 internal standards are low out of control. All detections have been qualified "J" while the nondetections have been qualified "UJ".
- The area for internal standard 1,4-Dichlorobenzene was out of control low in samples 11310A&B (TT-97) and 11208A&B. The area of chlorobenzene-d5 and fluorobenzene in sample 11208A&B was also out of control low. All detections have been qualified "J" while the nondetections have been qualified "UJ".
- The recovery of 1,2-dichloroethane-d4 was out of control high in samples 11316A&B and 11313A&B (TT-89).

### 3.2.5 Matrix Spike/Matrix Spike Duplicates

Due to nature of volatile organic sampling train cartridges it is impossible to spike the samples.

### 3.2.6 Additional Soil Vapor Analysis Information

The laboratory correctly reported all analyte concentrations in units of nanograms per sorbent tube analyzed. For some samples the lab also reported the concentrations in  $\mu\text{g}/\text{m}^3$ . These values are unusable and should be disregarded. The units of  $\mu\text{g}/\text{m}^3$  that appear in the report tables have been calculated using the nanogram value from the laboratory and the volume of the sample collected as measured in the field and are valid for use.

high due to contamination in the preparation blank of 42.2  $\mu\text{g/L}$ . The data has been qualified "BJ".

-The beryllium results for 2001SK01S01 through 2001SK01S04 and 2001SK01D02 are considered estimated and biased high due to contamination from the laboratory preparation blank.

-The sodium result is considered estimated and biased high due to contamination from the laboratory preparation blanks.

-The vanadium and nickel detected results in are considered estimated and biased high due to contamination in the laboratory preparations blank

### **3.1.4 Laboratory Duplicates**

No problems are noted.

### **3.1.5 Internal Standard and Surrogate Recoveries**

No problems are noted.

## **3.2 Soil Vapor**

This section presents an overview of the data validation performed by US EPA-Region 5 contractors using the National Functional Guidelines for Organic Data Review. The data is usable as noted here. Complete details can be found in the validation narratives provided in this appendix.

### **3.2.1 Instrument Calibration**

There are numerous compounds with initial and/or continuing calibration RSD outside criteria. Most of the outliers are minor and resulted in the estimation of data. The affected compounds have been qualified "J" for detected compounds and "UJ" for the undetected compounds. See Appendix I-2 for specific details. In those instances where the exceedance was considerably outside criteria, the data was determined unusable and those analytes have been qualified "R" (rejected) and are discussed here.

- The bromomethane result for samples TT-69 and TT-73 are unusable.

### **3.2.2 Laboratory Control Samples**

No problems were noted.

### **3.2.3 Method Blanks**

**Pesticides and PCBs** -The November 2000 sample set was analyzed for pesticides and PCBs and all samples were reported as nondetect. The reporting limits for for 2001SK01S01, 2001SK01S03 and 2001SK01S04 are considered estimated and biased low due to LCS recover. Several compound reporting limits for this sample delivery group are also estimated and biased low due to low recovery of the control check sample. The matrix spike and spike duplicate recoveries for a few pesticides were high outside control limits. Since the samples were nondetect the data is not qualified.

**Metals** - The mercury results for 2000SY04S01 through S13 are considered estimated and biased slightly high due to matrix spike (MS) recovery of 127.2% and high laboratory control sample (LCS) recovery of 124.3%. No qualification of the data was necessary since mercury was not detected in any of the associated field samples.

-The sodium results for 2000SY04S01 through S13 are considered estimated and biased low due to low MS recovery of 60.77%. The associated data has been qualified "J".

**General Chemistry** - The possible effect of matrix in the analysis of bromide and sulfate could not be determined because the laboratory tested duplicate samples instead of matrix spike duplicates. It was noted in validation that this was due to mingling of SW-846 and CLP methods.

-The sulfate results for 2000SY04S14 through S39 are considered estimated and biased low due to low laboratory fortified blank recovery of 66.5%.

### 3.1.3 Method Blanks

**Volatiles** - Methylene chloride was detected in the method blank associated with sample delivery group EDCJ8 (March 2000 sampling event) at 0.7  $\mu\text{g/L}$ . No samples were impacted.

**Semivolatiles** - Butylbenzylphthalate was detected in the method blank associated with sample delivery group EDCJ8 (March 2000 sampling event) at 3  $\mu\text{g/L}$ . No samples were impacted.

**Metals** - No serious blank problems were noted. Where calibration or preparation blanks contain low concentrations of analytes above the instrument detection limit the sample results are qualified "J" for the detections. No qualification is necessary for the nondetections.

-The calcium results for 2000SY01S01 through S14 and R12 are considered estimated and biased high due to contamination of 158  $\mu\text{g/L}$  in the preparation blank. The corresponding data has been qualified "BJ".

- The iron results for 2000SY04S14 through S39 are considered estimated and biased slightly

- The magnesium results for 2000SY04S31 through S39 are considered estimated and biased high due to CCV recovery of 111.44%. The data has been qualified "J".

-The nickel results for 2000SY04S14 through S39 are considered estimated and biased slightly high due to ICV recovery of 111.68% and CCV recoveries of 111.15%, 110.76%, and 114.01%. The nondetect data has been qualified "UJ" while the detected concentrations are qualified "J".

-The 2001SK01S02, -S03, and -S04 arsenic results and the -S03 lead results from the November 2000 sampling event are considered estimated and biased slightly high due to CCV recovery of 111.7% and 110.9% respectively. Note also that -S02, and -S03 are reported diluted and not detected, yet at a value above the detection limit.

-The 2001SK01S01 through -S04 and -D02 thallium results from the November 2000 sampling event are considered estimated and biased slightly high due to CCV recovery of 118.3%. Note also that these samples and 2001SK01D02 are reported diluted and not detected, yet at a value above the detection limit.

**General Chemistry** - Sulfate results for 2000SY04S44, S49, and S58 are considered estimated due to a low calibration coefficient of 0.992.

### 3.1.2 Laboratory Control Samples/Matrix Spike/Spike Duplicates

**Volatiles** -Laboratory control samples identified as VLCS54 and VLCS55 were used in place of a MS/MSD samples for the low concentration analysis of samples from Sample Delivery Group EDPK9 . All spike recoveries were within limits.

-The 1,2-dichloroethane detected results for the November 2000 samples are considered estimated and biased high due to out-of-control matrix spike duplicated recovery of 113%. Several other recoveries are biased high out-of-control, but the sample results are nondetect so no qualification is necessary.

**Semivolatiles** -Laboratory control sample identified as SLCS60 was used in place of a MS/MSD sample for the low concentration analysis of samples from Sample Delivery Group EDPK9. All spike recoveries were within limits.

-The di-n-butylphthalate results are estimated due to low LCS recovery in the November 2000 data set.

Hexachlorocyclopentadiene, 2,4-Dinitrophenol, 4-nitrophenol, and 4,6-Dinitro-2-methylphenol was noted for Sample Delivery Group E00FL. These analytes have been qualified "UJ" in the accompanying samples.

- Continuing calibration RSD outside criteria for 2,4-Dinitrophenol and 4-nitrophenol was noted for Sample Delivery Group EDCF6. These analytes have been qualified "UJ" in the accompanying samples.

-The tentatively identified compound results for the November 2000 sampling event are estimated due to lack of instrument calibration.

## Metals

-The chromium and zinc results for April/May 2000 samples 2000SY04S40 through S58 are estimated biased slightly high due to continuing calibration verification (CCV) recovery of 110.64% for chromium and 113.22% and 111.19 % for zinc. The data are usable and the detections have been qualified "J".

-The cobalt results for April 2000 samples 2000SY04S01 through S13 are considered estimated and biased slightly high due to initial calibration verification (ICV) recovery of 110.99% and CCV recovery of 110.52%. The data was qualified "UJ" since cobalt was not detected in any of the associated field samples.

-The CCV recovery of 112% for selenium associated with 2000SY04S54 is considered biased slightly high. The nondetect result has been qualified "UJ".

-The iron results for 2000SY04S01 through S13 are considered estimated and biased slightly high due to CCV recovery of 110.94%. The data has been qualified "J".

-The chromium and cobalt results for 2000SY01S01 through S14 and R12 are considered estimated and biased high due to high CCV recoveries of 112.35%, 112.96%, and 112.96% for chromium and 115.4% for cobalt. The nondetect results have been qualified "UJ" based on the CCV. The data reported as detected as been qualified "J".

-The chromium and cobalt results for 2000SY04S31 through S39 are considered estimated and biased slightly high due to high CCV recoveries of 112.63% for chromium and 110.74% for cobalt. The nondetect results have been qualified "UJ" based on the CCV. The data reported as detected as been qualified "J".

-Sample Delivery Group EDPK9 (April 2000 residential well sampling) had percent differences between initial and continuing calibration greater than 20% for a few poor performers associated with samples EDPL7 through L9, EDPM0 through M2, EDPM4, and EDPM5. However, the differences were within the 30% criteria allowed by the low level volatile method. None of these compounds were present in the site samples, therefore the data has been qualified "UJ". The specific compounds are chloromethane, bromoform, 1,2-Dibromo-3-chloropropane.

-Continuing calibration RSD for bromoform of 25.4% and 29.1% was noted in Sample Delivery Groups EDCG0 and EDCF6 respectively. This analyte was not detected in the associated samples, therefore the data was qualified "UJ".

-Continuing calibration RSD for 1,1-Dichloroethene, 2-Butanone, cis-1,2-Dichloropropene, 2-Hexanone, 1,2-Dibromo-3-chloropropane, and 1,2,4-Trichlorobenzene were also just outside criteria with differences ranging from 25.4% to 34.1%. The accompanying data in Sample Delivery Group E00FL has been qualified "UJ" as none of these analytes were detected.

-Continuing calibration RSD for acetone, 2-Butanone, 4-Methyl -2-Pentanone, and 2-Hexanone were outside criteria and the associated samples in Sample Delivery Group E00FL have been qualified "UJ" as none of these analytes were detected.

-Note that all of the 2-chloroethyl vinyl ether results from the November 2000 event were rejected by the laboratory due to the lack of calibration standard solutions.

### **Semivolatiles Organic Compounds**

- Continuing calibration whose corresponding initial calibration has percent relative standard deviations outside primary criteria and continuing calibration with percent difference outside criteria of 20% are noted for a few semivolatile compounds in Sample Delivery Group EDCJ8. The associated samples have been qualified "UJ" since these compound were not detected: 3-Nitroaniline, 2,4,-Dinitrophenol, 4-Nitrophenol, and 2,4-Dinitrotoluene.

- Continuing calibration RSD outside criteria for the compounds 4-chloroaniline, 2,4-Dinitrophenol, 4-nitrophenol, and 3,3'-Dichlorobenzidine was noted for Sample Delivery Group EDCG0. These analytes have been qualified "UJ" in the accompanying samples.

- Continuing calibration RSD outside criteria for the compounds phenol, bis(2-chloroethyl)Ether, 2,2'-Oxybis(1-chloro-propane), 4-chloroaniline, Hexachlorobutadiene,

- **Water Samples for Volatile Analysis** - All water samples were properly preserved with hydrochloric acid to a pH of less than two.

#### 2.3.4. Holding Times

Holding times were met for the extraction and/or analysis of all ground water and soil vapor samples except as noted here.

- Mercury samples S40-S58 from sample delivery group 20000SY04 were analyzed outside the required holding time of 28 days and the results are considered estimated. No mercury was reported, however, the nondetect samples have been qualified UJ.

### 3 Laboratory Control

This section presents an overview of the results of the data validation from the laboratory perspective. The March, April, and May 2000 organic analytical data was validated by US EPA-Region 5 contractors using the National Functional Guidelines for Organic Data Review while the November 2000 organic data was validated by Indiana Department of Environmental Management (IDEM). The inorganic analytical data was validated by the Indiana Department of Environmental Management according to the quality criteria contained in Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, SW-846, Third Edition, Final Updates 1, 2, 2a, 3, along with the EPA Drinking Water Standards, 1996. The data is generally acceptable for use and only deviations are noted below. Complete details can be found in the validation narratives included in this appendix with the laboratory reports and Form I's.

#### 3.1 Ground Water

##### 3.1.1 Instrument Calibration

##### Volatiles Organic Compounds

-Sample Delivery Group EDCJ8 (March 2000 residential well sampling). There are numerous instances of continuing calibration whose corresponding initial calibration has percent relative standard deviations (RSD) outside primary criteria and continuing calibration with percent difference outside criteria of 20%. The associated samples have been qualified "UJ" for these compounds which were not detected: chloromethane, vinyl chloride, carbon disulfide, 1,1,-Dichloroethane, 1,2,-Dichloroethane, 2-Butanone, bromochloromethane, cis-1,3,-Dichloropropene, trans-1,3,-Dichloropropene, 4-methyl-2-pentanone, 2-Hexanone, toluene, and 1,2-Dibromo-3-chloropropane.

All others were reported as not having detectable levels of the target compounds. The samples that contain an analyte, that is also present in a trip blank are qualified "B" unless the amount present is less than ten times the blank concentration for the common laboratory contaminants or five times the amount present in the blank for all other analytes. If the amount present in the sample is less than ten times the amount present in the blank for the common laboratory contaminants, or five times the amount present in the blank for any other analyte, the result is qualified "UB". The ground water trip blanks are summarized in Table 2-5 and the soil gas trip blanks are summarized in Table 2-6.

- **Ground Water** - Every trip blank except one, sample EDPL9 from 17 April 2000, contained low levels of methylene chloride. The lack of this compound in the field samples along with consistent levels between 0.6 and 5  $\mu\text{g/L}$  may indicate that the water used to prepare the blanks was contaminated with methylene chloride. Trip blank EDCH0, 26 April 2000, contained carbon disulfide at 2 J  $\mu\text{g/L}$  and acetone at 0.8 J  $\mu\text{g/L}$ . The field samples shipped with this blank did not contain these compounds. No data is qualified based on the results of the trip blanks.
- **Soil Vapor** -The trip blank associated with locations sampled 10/22/1999 contained 34 ng of methylene chloride. There is no impact to the sample set since no methylene chloride was detected in the associated samples.

-The trip blank associated with locations sampled on 10/20/1999 contained 13 ng of bromomethane and 140 ng of chloromethane. There is no impact to the sample set since no methylene chloride or bromomethane was detected.

-The trip blank associated with locations sampled on 10/26/1999 contained methylene chloride at 11 ng. The impact to the samples based on the blank is the qualification of samples 11223A&B (TT-80) and 11225A&B (TT-78) as nondetect based on the National Functional Guideline that less than 10x the blank of a common lab contaminant is not considered site related.

### 2.3.3. Sample Preservation

All samples were shipped in coolers that contained sufficient ice to maintain an internal temperature of 4 degrees C.

- **Water Samples for Metals** - The water samples were properly preserved with nitric acid.

Benzene, toluene, xylenes, styrene, and methylene chloride were present in the field blank collected at location TT-96 but not at location TT-71. The presence of these compounds indicates a potential source of these volatiles on site not necessarily associated with the subsurface soil vapor.

The equipment blanks were collected after the field blanks by drawing ambient air through a decontaminated sample collection assembly. Freon 11 and carbon tetrachloride were detected in both equipment blanks at concentrations comparable to the field blanks. Benzene, toluene, xylenes, styrene, and methylene chloride were detected in the equipment blank collected at location TT-96 but not at location TT-71. These concentrations are similar to the field blank from this location. The comparable concentrations of the equipment blanks to the field blanks argue that the source of these contaminants is attributable to the ambient air and not the decontamination process.

### 2.3 Sample Handling and Preservation

This section describes the impact to sample integrity due to handling from the time of collection until analysis. The preservation of samples, length of time in shipment, exposure of samples to environments other than the site and laboratory, and elapsed time between sampling and analysis all have the potential to impact samples.

#### 2.3.1 Chain of Custody and Cooler Receipt

- **Ground Water** - No sample custody or cooler receipt problems were noted for the ground water samples.
- **Soil Vapor Samples** - Cartridges 11214A and 11214B were shipped in each other's containers. The laboratory analyzed the samples in the proper sequence. Since the cartridges were from the same location and analyzed correctly the data is not adversely impacted.

#### 2.3.2. Trip Blanks

Trip blanks accompanied every ground water and soil vapor sample submitted for analysis. The ground water trip blanks were prepared by the lab from analyte free water and shipped to the site with the clean sample containers. These blanks were then included with each cooler that contained water samples for volatile analysis.

For the soil gas samples, an unopened sorbent tube was placed in the cooler on site and kept with the samples from the time of collection, through shipment, and receipt by the laboratory.

Only the blanks that demonstrated contamination or encountered analytical problems are discussed.

**Ground Water March/April/May 2000-** The water equipment blanks were collected by pouring the rinse water over the decontaminated sampling equipment and capturing the run-off. See Table 2-3 for a summary of compounds detected.

No volatile or semivolatile organic compounds were detected in the source blank or the equipment blank collected at location WT114A with the exception of bis (2-ethylhexyl)phthalate (BEHP) in the source blank at a concentration of 33  $\mu\text{g/L}$ . However, the equipment blank collected at location WT102C contained several trihalomethanes (chloroform, bromodichloromethane, dibromochloromethane), acetone, and 2- butanone. Because these analytes were not detected in the source blank their presence is likely due to inadequate rinsing of potable water from the sampling equipment. The field sample collected directly after this QC sample is not impacted since these compounds were not detected.

The source water blank, collected during the April/May 2000 sampling event was free from inorganic contamination with the exception of 3.9  $\mu\text{g/L}$  of magnesium. However, both of the equipment blanks contained inorganic analytes with the higher concentrations noted at location WT102C. Of note is the presence of calcium at 648  $\mu\text{g/L}$ , magnesium at 197  $\mu\text{g/L}$ , and sodium at 4160  $\mu\text{g/L}$  from location WT102C, and 140  $\mu\text{g/L}$  of calcium from location WT114A. All other inorganic analytes were detected concentrations of 69.9  $\mu\text{g/L}$  or less.

The impact to the sample data is negligible.

**Ground Water November 2000-**This blank showed chloride, sulfate, bromide, calcium, copper, iron, potassium, magnesium, sodium, vanadium, nickel, methylene chloride, chloroform, 1,2-dichloroethane, bromodichloromethane, di-n-butylphthalate, and bis(2-ethylhexyl)phthalate contamination. The data has been qualified "B" where the sample concentrations are greater than five times the amount of detected in the blank or "UB" when the amount detected is less than five times the amount reported in the blank. There were no instances of common laboratory contaminant detection in the samples.

**Soil Vapor -** Two equipment blanks and two field blanks were collected during the course of the field sampling effort to evaluate the potential influence on the subsurface samples from sampling equipment and ambient air. See Table 2-4 for a summary of the compounds detected in the ambient air and equipment blanks.

The field blanks were collected by drawing ambient air through a clean sorbent tube at approximately the same flow rate as used to collect the field sample. The air did not have contact with any sampling equipment as it was drawn into the sorbent tube. Freon 11 and carbon tetrachloride were present in both field blanks at concentrations near the sample reporting limit.

The outliers observed were primarily from the sample for metals analysis collected from residential well 54305 Westwood during both the April and November 2000 sampling. Specifically, the sample collected for metals analysis from 54305 Westwood during both the April and November 2000 events showed variability between the primary and duplicate samples of greater than 20% relative percent difference in a small subset of the metals. The concentrations of copper and zinc in both samples as well as the vanadium in November should be considered estimated. However, the impact to data quality is minimal since the results have been estimated for other reasons.

The monitoring well metals analyses demonstrated RPDs of less than 20% with the exception of arsenic at 5 mg/L while the duplicate was reported at 4 mg/L. The greatest difference calculated among all samples is the beryllium result from the November sampling that had an RPD of 100 percent. This difference is not alarming as it can be attributed to the low concentrations reported near the detection limit in the presence of blank contamination.

The few organic compounds that exceed the 20% cutoff also appear to be due to the low concentrations reported. The highest RPDs noted, 67% for bis(2-Ethylhexyl)phthalate and 40 % for cis-1,2-Dichloroethene, were calculated from concentrations of 8  $\mu\text{g/L}$  and 4  $\mu\text{g/L}$ , and from 2  $\mu\text{g/L}$  and 3  $\mu\text{g/L}$  respectively in the primary and duplicate samples. See Table 2-1 for all ground water duplicate sample RPDs.

**Soil Vapor** - The duplicate pairs show excellent precision with the following exception. See Table 2-2 for the soil vapor duplicate sample RPDs.

-Location TT-56: The volatile organic compounds reported in this duplicate pair were present in both the primary and duplicate sample at very high concentrations. Although the RPD ranged from 63 to 141 percent the concentrations reported between the pairs was generally within the same order of magnitude.

## 2.2 Equipment Blanks

Two ground water equipment blanks were collected during the April/May 2000 sampling and two soil gas equipment blanks were collected. For each matrix, one blank was collected near the beginning of the field effort and the other was collected at the conclusion of the investigation. In all instances, the blank samples were collected just prior to using the equipment at the referenced location. Also, a sample of the water used used to decontaminate the ground water sampling equipment was collected directly from the container to assure no analytes were present.

One equipment and one trip blank were collected during the November 2000 sampling.

## DATA QUALITY EVALUATION REPORT

### 1 General

This appendix presents the data usability assessment for soil gas and ground water samples collect in 2000. The soil gas samples were collected by the U.S. Army Corps of Engineers (USACE) Omaha District from October 20 through 29, 1999 and analyzed by Air Toxics Ltd, Folsom, California. The ground water sampling activities conducted from April 17 through May 3, 2000 were performed by the USACE and United States Geological Survey (USGS) with laboratory analysis by PDP Analytical Services, The Woodlands, TX. The ground water sampling conducted March 15-16, 2000 and November 15-16, 2000 was performed by the United States Environmental Protection Agency (USEPA) with laboratory analysis by EnviroSystems Inc., Columbia, MD and USEPA Region 5 Central Regional Laboratory respectively. The ground water samples were analyzed for the Target Compound List Volatiles and Semivolatiles and the Target Analyte List (23 metals plus cyanide) using USEPA Contract Laboratory Program Low Concentration Organic Analytical Services (OIC02.1) and Inorganic Routine Analytical Services. The soil vapor samples were prepared and analyzed using SW-846 Method 5041A/8260B. Quality control (QC) checks were performed routinely during data collection and analysis to verify that the data collected are of appropriate quality for the intended data use and that the data quality objectives were met. All of the data generated was validated using the criteria specified in the QAPP and QAPP addendums in conjunction with either the National Functional Guidelines for Organic and Inorganic Data Review - EPA 540/R-94/012 and /013, or the Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, SW-846, Third Edition, Final Updates 1, 2, 2a, 3, along with the EPA Drinking Water Standards, 1996 using the criteria established in the approved QAPPs. The laboratory and validation reports are included in this appendix.

### 2 Sample Collection Quality Control

#### 2.1 Field Duplicates

Field duplicates were collected at a rate of approximately 10% from all media sampled. For review purposes a limit of 20% (Relative Percent Difference) RPD was imposed on the ground water data and a limit of 50% RPD was imposed on the soil gas data to evaluate the precision of sample collection. In general, precision was very good and only outliers are discussed below.

**Ground Water** - The ground water field duplicates demonstrate excellent precision between sample pairs for all sampling events with relative percent differences predominantly in the range of zero to ten percent.

**LABORATORY NARRATIVE**  
**Analysis of Volatile Organic Compounds in VOST Cartridges**  
**by EPA 5041A/8260B**  
**U.S. Army Corps of Engineers**  
**Work Order #9812260**

Six Tenax and Tenax/charcoal tube pairs (VOST cartridges) were received on December 16, 1998. The sacrificial temperature check vial was not provided with the shipment, therefore the actual temperature of the shipment was not recorded. The samples were received on ice and therefore their integrity is not in question. The laboratory performed the analysis via EPA SW-846 Method 5041A using GC/MS in the full scan mode. The method involves thermal desorption of the VOST cartridges for 11 min. at 180° C using an inert gas. The gas stream is then bubbled through 5 mL of organic free water and trapped on the sorbent trap of the purge and trap system. The trap is thermally desorbed to elute the components into the GC system for further separation. See the data sheets for the reporting limits for each compound.

Bromomethane was detected in the laboratory blank run on 12/17/98. The "B" flag was applied to the associated results.

Recovery of the internal standard compound 1,4-Dichlorobenzene-d4 was outside the limits of  $\pm 50\%$  difference (D) from the daily calibration checks internal standard area in sample 7903A&B. Re-analysis to confirm matrix effects is not possible for VOST tube samples.

Recovery of the surrogate compound 1,2-Dichloroethane-d4 was slightly above the laboratory established limits of 69-112% in sample 7903A&B. Recovery of the surrogate compound 4-Bromofluorobenzene was above the laboratory established limits of 78-119% in samples 7716A&B, 7901A&B, 7903A&B and 7902A&B. Re-analysis to confirm matrix effects is not possible for VOST tube samples.

There were no other out of the ordinary circumstances to report.

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:

- B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
- J - Estimated Value.
- E - Exceeds instrument calibration range.
- S - Saturated Peak.
- Q - Exceeds quality control limits.
- U - Compound analyzed for but not detected above the detection limit.
- N - The identification is based on presumptive evidence.

SUBJECT: Review of Data  
Received for Review on 1/12/2000

FROM: Stephen L. Ostrodka, Chief (HSRL-5J) *for Steve Ostrodka*  
Superfund Technical Support Section *Richard & Byrnes*  
*2/16/00*

TO: Data User: PRP

We have reviewed the data for the following case:

SITE NAME: 4IMCO DUMP (IN)

*work order*  
CASE NUMBER: 9910376 SDG NUMBER: \_\_\_\_\_

Number and Type of Samples: Eight VOST cartridges

Sample Numbers: 11101, 11214, 11008, 11020, 11102, 11111, 11004, 11201

Laboratory: Air Toxics LTD Hrs. for Review: 9.0

Following are our findings:

*The data are usable and acceptable with the qualifications described in the attached narrative.*

NARRATIVE

Page 1 of 8

Laboratory: Air Toxics Ltd  
Site: Himco Dump (IN)

Case:  
SDG: 9910376

Below is a summary of the out-of-control audits and possible effects on the data for this Case/SDG:

Eight VOST Cartridges, numbered 11101, 11214, 11008, 11020, 11102, 11111, 11004 and 11201, were collected on October 25, 1999. The lab received the samples on October 26, 1999 in good condition. All samples were analyzed for volatile organic analytes. All were analyzed according to modified SW846 8260.

The VOST analyses were performed within the technical holding times of 14 days after sample collection; therefore the results are acceptable.

Reviewed by: T Sedlacek Lockheed Martin/ESAT  
Date: January 21, 2000

## NARRATIVE

Page 2 of 8

Laboratory: Air Toxics Ltd  
Site: Himco Dump (IN)

Case:  
SDG: 9910376

### 1. HOLDING TIME

Eight VOST Cartridges, numbered 11101, 11214, 11008, 11020, 11102, 11111, 11004 and 11201, were collected on October 25, 1999. The lab received the samples on October 26, 1999 in good condition. All samples were analyzed for volatile organic analytes. All were analyzed according to modified SW846 8260.

The VOST analyses were performed within the technical holding times of 14 days after sample collection; therefore the results are acceptable.

### 2. GC/MS TUNING AND GC INSTRUMENT PERFORMANCE

All GC/MS tuning complied with mass list and ion abundance criteria for BFB, and all samples were analyzed within the twelve (12) hour periods for instrument performance checks.

### 3. CALIBRATION

Initial and continuing calibrations of the Volatile, standards were evaluated for target compound list and outliers are recorded on the forms included as part of this narrative.

### 4. BLANKS

The lab ran a matrix method blank for each day the VOST cartridges were analyzed. Cartridges used for daily methods blanks were not from the same batch or sampling media. Each of the blanks was labeled as "Lab Blank". All of the blanks had no TCLs or TICs present. Because the lab did not include any sort of identification for the blanks, it would be impossible to determine which samples are associated with which blank.

### 5. SYSTEM MONITORING COMPOUND AND SURROGATE RECOVERY

The volatile system monitoring compounds were within QC required limits for recovery and retention time.

### 6. MATRIX SPIKE/MATRIX SPIKE DUPLICATE

Due to the nature of the VOST cartridge matrix it is

Reviewed by: T Sedlacek Lockheed Martin/ESAT  
Date: January 21, 2000

## NARRATIVE

Page 3 of 8

Laboratory: Air Toxics Ltd  
Site: Himco Dump (IN)

Case:  
SDG: 9910376

impossible to perform spiking on the samples. The method requires a batch certification of the VOST cartridges prior to use. The lab did not provide evidence that the pre-certification was performed. All results could be considered suspect due to possible reduced capacity or retention of the VOST media.

### 7. FIELD BLANK AND FIELD DUPLICATE

The samples did not provide a field blank with this SDG. Due the collection method a field duplicate can not be collected.

### 8. INTERNAL STANDARDS

The internal standards retention times and area counts were all within the required QC limits: with the exception of the area for 1,4-dichlorobenze-d4 was out of control high a Lab Blank.

### 9. COMPOUND IDENTIFICATION

Target compounds (TCLs) and Tentatively Identified Compounds (TICs) were identified using a "best fit" library search method.

### 10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

All target compound quantitation was properly reported.

### 11. SYSTEM PERFORMANCE

GC/MS baseline indicated acceptable performance.

### 12. ADDITIONAL INFORMATION

Method modifications which could adversely affect data quality:

1. "Cartridges used for daily method blank may or may not be from the same batch or sampling media" as the analyzed samples.
2. "Sampling media provided by the client is batch certified ahead of time, only if client provides blank cartridges"

Reviewed by: T Sedlacek Lockheed Martin/ESAT  
Date: January 21, 2000

NARRATIVE

Page 4 of 8

Laboratory: Air Toxics Ltd  
Site: Himco Dump (IN)

Case:  
SDG: 9910376

The lab failed to provide copies of the manual data manipulations performed in this data set. The reviewer is unable to determine what effect those actions have on the overall quality of the data.

Sample 11020 was lost during analysis. The filament in the mass spectrometer broke during the analysis run. The lab was unable to generate any data or reports.

The lab reported that samples 11214a and 11214b were found in each other's containers. The lab analyzed them in the proper sequence. This should not adversely effect the data quality.

TO: Data User: PRP

We have reviewed the data for the following case:

SITE NAME: HIMCO DUMP (IN)

*work order*  
~~CASE~~ NUMBER: 9910301 SDG NUMBER: \_\_\_\_\_

Number and Type of Samples: Eight VOST Cartridges

Sample Numbers: 11003, 11005, 11006, 11009, 11012, 11019, 11021, 11022

Laboratory: Air Toxics LTO Hrs. for Review: 9.0

Following are our findings:

*No data are useable and acceptable under the  
qualifications described in the attached narrative.

NARRATIVE

Page 1 of 5

Laboratory: Air Toxics Ltd  
Site: Himco Dump (IN)

Case:  
SDG: 9910301

Below is a summary of the out-of-control audits and possible effects on the data for this Case/SDG:

Eight VOST Cartridges, numbered 11003, 11005, 11008, 11009, 11012, 11019, 11021 and 11022, were collected on October 20, 1999. The lab received the samples on October 21, 1999 in good condition. All samples were analyzed for volatile organic analytes. All were analyzed according to modified SW846 8260.

The VOST analyses were performed within the technical holding times of 14 days after sample collection; therefore the results are acceptable.

## NARRATIVE

Page 2 of 5

Laboratory: Air Toxics Ltd  
Site: Himco Dump (IN)

Case:  
SDG: 9910301

### 1. HOLDING TIME

Eight VOST Cartridges, numbered 11003, 11005, 11008, 11009, 11012, 11019, 11021 and 11022, were collected on October 20, 1999. The lab received the samples on October 21, 1999 in good condition. All samples were analyzed for volatile organic analytes. All were analyzed according to modified SW846 8260.

The VOST analyses were performed within the technical holding times of 14 days after sample collection; therefore the results are acceptable.

### 2. GC/MS TUNING AND GC INSTRUMENT PERFORMANCE

All GC/MS tuning complied with mass list and ion abundance criteria for BFB, and all samples were analyzed within the twelve (12) hour periods for instrument performance checks.

### 3. CALIBRATION

Initial and continuing calibrations of the Volatile, standards were evaluated for target compound list and outliers are recorded on the forms included as part of this narrative.

### 4. BLANKS

The lab ran a matrix method blank for each day the VOST cartridges were analyzed. Cartridges used for daily methods blanks were not from the same batch or sampling media. Each of the blanks was labeled as "Lab Blank". All of the blanks had no TCLs or TICs present. Because the lab did not include any sort of identification for the blanks, it would be impossible to determine which samples are associated with which blank.

### 5. SYSTEM MONITORING COMPOUND AND SURROGATE RECOVERY

The volatile system monitoring compounds were within QC required limits for recovery and retention time; with the exception of 11003 A/B which had the recovery of three surrogates high and one low. Therefore in samples 11003 A/B all hits should be flagged "J" and non-detects "UJ"

NARRATIVE

Page 3 of 5

Laboratory: Air Toxics Ltd  
Site: Himco Dump (IN)

Case:  
SDG: 9910301

6. MATRIX SPIKE/MATRIX SPIKE DUPLICATE

Due to the nature of the VOST cartridge matrix it is impossible to perform spiking on the samples. The method requires a batch certification of the VOST cartridges prior to use. The lab did not provide evidence that the pre-certification was performed. All results could be considered suspect due to reduced capacity or retention of the VOST media.

7. FIELD BLANK AND FIELD DUPLICATE

The samples did not provide a field blank with this SDG. Due to the collection method a field duplicate can not be collected.

8. INTERNAL STANDARDS

The internal standards retention times and area counts for the VOA fraction were all within the required QC limits: with the exception of 11003 A/B in which the area of all three internal standards were out of control low. In sample 11003 A/B all results are qualified estimated. See section 5

9. COMPOUND IDENTIFICATION

Target compounds (TCLs) and Tentatively Identified Compounds (TICs) were identified using a "best fit" library search method.

10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

All target compound quantitation was properly reported. All dilutions were properly calculated. The upper calibration range and instrument saturation limits were properly documented and noted on the final results.

11. SYSTEM PERFORMANCE

GC/MS baseline indicated acceptable performance.

12. ADDITIONAL INFORMATION

Method modifications which could adversely affect data

NARRATIVE

Page 4 of 5

Laboratory: Air Toxics Ltd  
Site: Himco Dump (IN)

Case:  
SDG: 9910301

quality:

1. "Cartridges used for daily method blank may or may not be from the same batch or sampling media" as the analyzed samples.
2. "Sampling media provided by the client is batch certified ahead of time, only if client provides blank cartridges"

Sample 11003 A/B had numerous compounds which either exceeded the calibration range or saturated the detector. Aside from biasing the results for a particular analyte low, detector saturation could generated false positives and false negatives for the analytes which elute closely with that analyte.

SUBJECT: Review of Data  
Received for Review on 1/12/2000

FROM: Stephen L. Ostrodka, Chief (HSRL-5J) *per L. Ostrodka*  
Superfund Technical Support Section *Richard L. Ogilvie*  
*2/16/00*

TO: Data User: PRP

We have reviewed the data for the following case:

SITE NAME: HIMCO DUMP (IN)

*with order*  
~~CASE~~ NUMBER: 9910316 SDG NUMBER: \_\_\_\_\_

Number and Type of Samples: 10 VOST cartridges

Sample Numbers: 11025, 11014, 11105, 11106, 11107, 11104, 11015, 11002, 11006

Laboratory: Air Toxics LTD Hrs. for Review: 11.0

Following are our findings:

*The data are usable and acceptable provided that the Laboratory can provide the manual calculations and volume collected for the samples.*

Laboratory: Air Toxics Ltd  
Site: Himco Dump (IN)

Case:  
SDG: 9910316

Below is a summary of the out-of-control audits and possible effects on the data for this Case/SDG:

Nine VOST Cartridges, numbered 11025, 11014, 11105, 11106, 11107, 11104, 11015, 11002 and 11006, were collected on October 21, 1999. The lab received the samples on October 22, 1999 in good condition. All samples were analyzed for volatile organic analytes. All were analyzed according to modified SW846 8260.

The VOST analyses were performed within the technical holding times of 14 days after sample collection; therefore the results are acceptable.

## NARRATIVE

Page 2 of 6

Laboratory: Air Toxics Ltd  
Site: Himco Dump (IN)

Case:  
SDG: 9910316

### 1. HOLDING TIME

Nine VOST Cartridges, numbered 11025, 11014, 11105, 11106, 11107, 11104, 11015, 11002 and 11006, were collected on October 21, 1999. The lab received the samples on October 22, 1999 in good condition. All samples were analyzed for volatile organic analytes. All were analyzed according to modified SW846 8260.

The VOST analyses were performed within the technical holding times of 14 days after sample collection; therefore the results are acceptable.

### 2. GC/MS TUNING AND GC INSTRUMENT PERFORMANCE

All GC/MS tuning complied with mass list and ion abundance criteria for BFB, and all samples were analyzed within the twelve (12) hour periods for instrument performance checks.

### 3. CALIBRATION

Initial and continuing calibrations of the Volatile, standards were evaluated for target compound list and outliers are recorded on the forms included as part of this narrative.

### 4. BLANKS

The lab ran a matrix method blank for each day the VOST cartridges were analyzed. Cartridges used for daily methods blanks were not from the same batch or sampling media. Each of the blanks was labeled as "Lab Blank". All of the blanks had no TCLs or TICs present. Because the lab did not include any sort of identification for the blanks, it would be impossible to determine which samples are associated with which blank.

### 5. SYSTEM MONITORING COMPOUND AND SURROGATE RECOVERY

The volatile system monitoring compounds were within QC required limits for recovery and retention time; with the exception of Toluene-d8 and 4-Bromofluorobenzene in sample 11107. Therefore in sample 11107 A/B all hits should be flagged "J" and non-detects "UJ"

NARRATIVE

Page 3 of 6

Laboratory: Air Toxics Ltd  
Site: Himco Dump (IN)

Case:  
SDG: 9910316

6. MATRIX SPIKE/MATRIX SPIKE DUPLICATE

Due to the nature of the VOST cartridge matrix it is impossible to perform spiking on the samples. The method requires a batch certification of the VOST cartridges prior to use. The lab did not provide evidence that the pre-certification was performed. All results could be considered suspect due to possible reduced capacity or retention of the VOST media.

7. FIELD BLANK AND FIELD DUPLICATE

The samples did not provide a field blank with this SDG. Due to the collection method a field duplicate can not be collected

8. INTERNAL STANDARDS

The internal standards retention times and area counts for the VOA fraction were all within the required QC limits: with the exception of Chlorobenzene-d5 area in sample 11107A/B which was out of control high. Therefore the analytes quantitated with this internal standard are biased low and hits should be flagged "J" and non-detects "UJ".

9. COMPOUND IDENTIFICATION

Target compounds (TCLs) and Tentatively Identified Compounds (TICs) were identified using a "best fit" library search method.

10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

All target compound quantitation for total ng were properly reported. In this SDG the laboratory suddenly started to report the sample results in ug/m<sup>3</sup>. The laboratory did not provide either copies of the manual calculations or the volume collected for the samples. It should be noted that the apparent "correction factor" from ng to ug/m<sup>3</sup> is not uniform for all detected analytes in the same sample. If the lab can explain or justify the seeming discrepancy the ug/m<sup>3</sup> data is useable otherwise the ug/m<sup>3</sup> data would be unusable and flagged "R

NARRATIVE

Page 4 of 6

Laboratory: Air Toxics Ltd  
Site: Himco Dump (IN)

Case:  
SDG: 9910316

11. SYSTEM PERFORMANCE

GC/MS baseline indicated acceptable performance.

12. ADDITIONAL INFORMATION

Method modifications which could adversely affect data quality:

1. "Cartridges used for daily method blank may or may not be from the same batch or sampling media" as the analyzed samples.
2. "Sampling media provided by the client is batch certified ahead of time, only if client provides blank cartridges"

The lab failed to provide copies of the manual data manipulations performed in this data set. The reviewer is unable to determine what effect those actions have on the overall quality of the data.

In sample 11107A/B the results for Freon 11, and Styrene exceeded the calibration range. The results for Tetrachloroethene saturated the detector. Aside from biasing the results for a particular analyte low, detector saturation could generate false positives and false negatives for the analytes which elute closely with that analyte.

We have reviewed the data for the following case:

SITE NAME: HIMCO DUMP (IN)

*work order*  
CASE NUMBER: 9910396 SDG NUMBER: \_\_\_\_\_

Number and Type of Samples: Five VOST cartridges

Sample Numbers: 11204, 11223, 11210, 11225, 11211

Laboratory: Lat Air Toxics Hrs. for Review: 6

Following are our findings:

*The data are reliable and acceptable with the  
qualifications described in the attached narrative.

Laboratory: Air Toxics Ltd  
Site: Himco Dump (IN)

Case:  
SDG: 9910396

Below is a summary of the out-of-control audits and possible effects on the data for this Case/SDG:

Five VOST Cartridges, numbered 11204, 11223, 11210, 11225, and 1121, were collected on October 25, 1999. The lab received the samples on October 27, 1999 in good condition. All samples were analyzed for volatile organic analytes. All were analyzed according to modified SW846 8260.

The VOST analyses were performed within the technical holding times of 14 days after sample collection; therefore the results are acceptable.

## NARRATIVE

Page 2 of 6

Laboratory: Air Toxics Ltd  
Site: Himco Dump (IN)

Case:  
SDG: 9910396

### 1. HOLDING TIME

Five VOST Cartridges, numbered 11204, 11223, 11210, 11225, and 1121, were collected on October 25, 1999. The lab received the samples on October 27, 1999 in good condition. All samples were analyzed for volatile organic analytes. All were analyzed according to modified SW846 8260.

The VOST analyses were performed within the technical holding times of 14 days after sample collection; therefore the results are acceptable.

### 2. GC/MS TUNING AND GC INSTRUMENT PERFORMANCE

All GC/MS tuning complied with mass list and ion abundance criteria for BFB, and all samples were analyzed within the twelve (12) hour periods for instrument performance checks.

### 3. CALIBRATION

Initial and continuing calibrations of the Volatile, standards were evaluated for target compound list and outliers are recorded on the forms included as part of this narrative.

### 4. BLANKS

The lab ran a matrix method blank for each day the VOST cartridges were analyzed. Cartridges used for daily methods blanks were not from the same batch or sampling media. Each of the blanks was labeled as "Lab Blank". All of the blanks had no TCLs or TICs present. Because the lab did not include any sort of identification for the blanks, it would be impossible to determine which samples are associated with which blank.

### 5. SYSTEM MONITORING COMPOUND AND SURROGATE RECOVERY

The volatile system monitoring compounds were within QC required limits for recovery and retention time; with the exception of the recovery of Bromofluorobenzene in sample 11225 which was high. Positive results in sample 11225 are qualified "J".

Reviewed by: T Sedlacek Lockheed Martin/ESAT  
Date: January 21, 2000

NARRATIVE

Page 3 of 6

Laboratory: Air Toxics Ltd  
Site: Himco Dump (IN)

Case:  
SDG: 9910396

6. MATRIX SPIKE/MATRIX SPIKE DUPLICATE

Due to the nature of the VOST cartridge matrix it is impossible to perform spiking on the samples. The method requires a batch certification of the VOST cartridges prior to use. The lab did not provide evidence that the pre-certification was performed. All results could be considered suspect due to possible reduced capacity or retention of the VOST media.

7. FIELD BLANK AND FIELD DUPLICATE

The samples did not provide a field blank with this SDG. Due to the collection method a field duplicate can not be collected.

8. INTERNAL STANDARDS

The internal standards retention times and area counts for the VOA fraction were all within the required QC limits: with the exception of the area for 1,4-Dichlorobenzene-d4 was out of control low in sample 11210. Therefore in sample 11210 positive results are qualified "J" and non-detects are qualified "UJ"

9. COMPOUND IDENTIFICATION

Target compounds (TCLs) and Tentatively Identified Compounds (TICs) were identified using a "best fit" library search method.

10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

All target compound quantitation was properly reported.

11. SYSTEM PERFORMANCE

GC/MS baseline indicated acceptable performance.

12. ADDITIONAL INFORMATION

Method modifications which could adversely affect data quality:

1. "Cartridges used for daily method blank may or may not be from the same batch or sampling media" as the analyzed

samples.

2. "Sampling media provided by the client is batch certified ahead of time, only if client provides blank cartridges"

The lab failed to provide copies of the manual data manipulations performed in this data set. The reviewer is unable to determine what effect those actions have on the overall quality of the data.

SUBJECT: Review of Data  
Received for Review on 1/12/2000

FROM: Stephen L. Ostrodka, Chief (HSRL-5J) *for Steven Arnold*  
Superfund Technical Support Section *Richard & Ryan*  
*2/16/00*

TO: Data User: PRP

We have reviewed the data for the following case:

SITE NAME: HIMCO DUMP (I.W.)

CASE NUMBER: \_\_\_\_\_ SDG NUMBER: 9910432

Number and Type of Samples: Nine VOST Cartridges

Sample Numbers: 11221, 11222, 11218, 11216, 11215, 11219, 11217, 11224

Laboratory: Air TOXICS LTD Hrs. for Review: 10

Following are our findings:

*the data are usable and acceptable with the qualifications described in the attached memorandum  
Richard & Ryan*

Laboratory: Air Toxics Ltd  
Site: Himco Dump (IN)

Case:  
SDG: 9910432

Below is a summary of the out-of-control audits and possible effects on the data for this Case/SDG:

Nine VOST Cartridges, numbered 11221, 11206, 11218, 11216, 11215, 11215, 11219, 11213, 11217 and 11224, were collected on October 27, 1999. The lab received the samples on October 28, 1999 in good condition. All samples were analyzed for volatile organic analytes. All were analyzed according to modified SW846 8260.

The VOST analyses were performed within the technical holding times of 14 days after sample collection; therefore the results are acceptable.

## NARRATIVE

Page 2 of 8

Laboratory: Air Toxics Ltd  
Site: Himco Dump (IN)

Case:  
SDG: 9910432

### 1. HOLDING TIME

Nine VOST Cartridges, numbered 11221, 11206, 11218, 11216, 11215, 11215, 11219, 11213, 11217 and 11224, were collected on October 27, 1999. The lab received the samples on October 28, 1999 in good condition. All samples were analyzed for volatile organic analytes. All were analyzed according to modified SW846 8260.

The VOST analyses were performed within the technical holding times of 14 days after sample collection; therefore the results are acceptable.

### 2. GC/MS TUNING AND GC INSTRUMENT PERFORMANCE

All GC/MS tuning complied with mass list and ion abundance criteria for BFB, and all samples were analyzed within the twelve (12) hour periods for instrument performance checks.

### 3. CALIBRATION

Initial and continuing calibrations of the Volatile, standards were evaluated for target compound list and outliers are recorded on the forms included as part of this narrative.

### 4. BLANKS

The lab ran a matrix method blank for each day the VOST cartridges were analyzed. Cartridges used for daily methods blanks were not from the same batch or sampling media. Each of the blanks was labeled as "Lab Blank". All of the blanks had no TCLs or TICs present. Because the lab did not include any sort of identification for the blanks, it would be impossible to determine which samples are associated with which blank.

### 5. SYSTEM MONITORING COMPOUND AND SURROGATE RECOVERY

The volatile system monitoring compounds were within QC required limits for recovery and retention time; therefore the results are acceptable.

## NARRATIVE

Page 3 of 8

Laboratory: Air Toxics Ltd  
Site: Himco Dump (IN)

Case:  
SDG: 9910432

### 6. MATRIX SPIKE/MATRIX SPIKE DUPLICATE

Due to the nature of the VOST cartridge matrix it is impossible to perform spiking on the samples. The method requires a batch certification of the VOST cartridges prior to use. The lab did not provide evidence that the pre-certification was performed. All results could be considered suspect due to possible reduced capacity or retention of the VOST media.

### 7. FIELD BLANK AND FIELD DUPLICATE

The samples did not provide a field blank with this SDG. Due to the collection method a field duplicate can not be collected.

### 8. INTERNAL STANDARDS

The internal standards retention times and area counts for the VOA fraction were all within the required QC limits: with the exception of the areas for Chlorobenzene-d5 and 1,4-Dichlorobenzene-d4 in sample 11215 out of control low and the area of 1,4-Dichlorobenzene-d4 in a lab blank was out of control high. Therefore the positive results for those compounds quantitated with Chlorobenzene-d5 and 1,4-Dichlorobenzene-d4 in sample 11215 are qualified "J" and compounds quantitated with 1,4-Dichlorobenzene-d4 in the lab Blank hits are qualified "J" and non-detects are qualified "UJ"

### 9. COMPOUND IDENTIFICATION

Target compounds (TCLs) and Tentatively Identified Compounds (TICs) were identified using a "best fit" library search method.

### 10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

All target compound quantitation was properly reported.

### 11. SYSTEM PERFORMANCE

GC/MS baseline indicated acceptable performance.

Site: Himco Dump (IN)

Case:  
SDG: 9910432

12. ADDITIONAL INFORMATION

Method modifications which could adversely affect data quality:

1. "Cartridges used for daily method blank may or may not be from the same batch or sampling media" as the analyzed samples.
2. "Sampling media provided by the client is batch certified ahead of time, only if client provides blank cartridges"

The lab failed to provide copies of the manual data manipulations performed in this data set. The reviewer is unable to determine what effect those actions have on the overall quality of the data.

TO: Data User: PRP

We have reviewed the data for the following case:

SITE NAME: 4IMCO DUMP (IN)

*with order*  
CASE NUMBER: 9910444 SDG NUMBER: \_\_\_\_\_

Number and Type of Samples: Seven VOST cartridges

Sample Numbers: 11206, 11310, 11205, 11203, 11222, 11212, 11207

Laboratory: Air toxics LTD Hrs. for Review: 4

Following are our findings:

*to date are usable and acceptable, with the  
implications described in the attached narrative.

Laboratory: Air Toxics Ltd  
Site: Himco Dump (IN)

Case:  
SDG: 9910444

Below is a summary of the out-of-control audits and possible effects on the data for this Case/SDG:

Seven VOST Cartridges, numbered 11208, 11310, 11205, 11203, 11222, 11212, and 11207, were collected on October 28, 1999. The lab received the samples on October 29, 1999 in good condition. All samples were analyzed for volatile organic analytes. All were analyzed according to modified SW846 8260.

The VOST analyses were performed within the technical holding times of 14 days after sample collection; therefore the results are acceptable.

## NARRATIVE

Page 2 of 6

Laboratory: Air Toxics Ltd  
Site: Himco Dump (IN)

Case:  
SDG: 9910444

### 1. HOLDING TIME

Seven VOST Cartridges, numbered 11208, 11310, 11205, 11203, 11222, 11212, and 11207, were collected on October 28, 1999. The lab received the samples on October 29, 1999 in good condition. All samples were analyzed for volatile organic analytes. All were analyzed according to modified SW846 8260.

The VOST analyses were performed within the technical holding times of 14 days after sample collection; therefore the results are acceptable.

### 2. GC/MS TUNING AND GC INSTRUMENT PERFORMANCE

All GC/MS tuning complied with mass list and ion abundance criteria for BFB, and all samples were analyzed within the twelve (12) hour periods for instrument performance checks.

### 3. CALIBRATION

Initial and continuing calibrations of the Volatile, standards were evaluated for target compound list and outliers are recorded on the forms included as part of this narrative.

### 4. BLANKS

The lab ran a matrix method blank for each day the VOST cartridges were analyzed. Cartridges used for daily methods blanks were not from the same batch or sampling media. Each of the blanks was labeled as "Lab Blank". All of the blanks had no TCLs or TICs present. Because the lab did not include any sort of identification for the blanks, it would be impossible to determine which samples are associated with which blank.

### 5. SYSTEM MONITORING COMPOUND AND SURROGATE RECOVERY

The volatile system monitoring compounds were within QC required limits for recovery and retention time; therefore the results are acceptable.

## NARRATIVE

Page 3 of 6

Laboratory: Air Toxics Ltd  
Site: Himco Dump (IN)

Case:  
SDG: 9910444

### 6. MATRIX SPIKE/MATRIX SPIKE DUPLICATE

Due to the nature of the VOST cartridge matrix it is impossible to perform spiking on the samples. The method requires a batch certification of the VOST cartridges prior to use. The lab did not provide evidence that the pre-certification was performed. All results could be considered suspect due to possible reduced capacity or retention of the VOST media.

### 7. FIELD BLANK AND FIELD DUPLICATE

The samples did not provide a field blank with this SDG. Due the collection method a field duplicate can not be collected.

### 8. INTERNAL STANDARDS

The internal standards retention times and area counts for the VOA fraction were all within the required QC limits: with the exception of:

The area for 1,4-Dichlorobenzene was out of control low in samples 11310, and 11208 and high in a lab blank.

The area for 1,4-Dichlorobenzene was out of control high in a lab blank.

The area of Chlorobenzene-d5, Fluorobenzene and 1,4-Dichlorobenzene were out of control low in sample 11208.

Therefore in the above listed samples positive results are qualified estimated "J" and non-detects are qualified "UJ"

### 9. COMPOUND IDENTIFICATION

Target compounds (TCLs) and Tentatively Identified Compounds (TICs) were identified using a "best fit" library search method.

### 10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

All target compound quantitation was properly reported.

### 11. SYSTEM PERFORMANCE

GC/MS baseline indicated acceptable performance.

Case:  
SDG: 9910444

12. ADDITIONAL INFORMATION

Method modifications which could adversely affect data quality:

1. "Cartridges used for daily method blank may or may not be from the same batch or sampling media" as the analyzed samples.
2. "Sampling media provided by the client is batch certified ahead of time, only if client provides blank cartridges"

The lab failed to provide copies of the manual data manipulations performed in this data set. The reviewer is unable to determine what effect those actions have on the overall quality of the data.

SUBJECT: Review of Data  
Received for Review on 1/12/2000

FROM: Stephen L. Ostrodka, Chief (HSRL-SJ) *for Steven Ostrodka*  
Superfund Technical Support Section *Richard L. Byrd*  
*2/16/00*

TO: Data User: PRP

We have reviewed the data for the following case:

SITE NAME: HIMCO DUMP (IN)

*work order*  
~~CASE~~ NUMBER: 9910471 SDG NUMBER: \_\_\_\_\_

Number and Type of Samples: Six VOST cartridges

Sample Numbers: 11316, 11313, 11311, 11315, 11317, 11304

Laboratory: Air Toxic LTD Hrs. for Review: 4

Following are our findings:

*The data are usable and acceptable with the  
qualifications described in the attached memorandum  
Richard L. Byrd*

NARRATIVE

Page 1 of 8

Laboratory: Air Toxics Ltd  
Site: Himco Dump (IN)

Case:  
SDG: 9910471

Below is a summary of the out-of-control audits and possible effects on the data for this Case/SDG:

Six VOST Cartridges, numbered 11316, 11313, 11311, 11315, 11317, and 11304, were collected on October 22, 1999. The lab received the samples on October 30, 1999 in good condition. All samples were analyzed for volatile organic analytes. All were analyzed according to modified SW846 8260.

The VOST analyses were performed within the technical holding times of 14 days after sample collection; therefore the results are acceptable.

## NARRATIVE

Page 2 of 8

Laboratory: Air Toxics Ltd  
Site: Himco Dump (IN)

Case:  
SDG: 9910471

### 1. HOLDING TIME

Six VOST Cartridges, numbered 11316, 11313, 11311, 11315, 11317, and 11304, were collected on October 229, 1999. The lab received the samples on October 30, 1999 in good condition. All samples were analyzed for volatile organic analytes. All were analyzed according to modified SW846 8260.

The VOST analyses were performed within the technical holding times of 14 days after sample collection; therefore the results are acceptable.

### 2. GC/MS TUNING AND GC INSTRUMENT PERFORMANCE

All GC/MS tuning complied with mass list and ion abundance criteria for BFB, and all samples were analyzed within the twelve (12) hour periods for instrument performance checks.

### 3. CALIBRATION

Initial and continuing calibrations of the Volatile, standards were evaluated for target compound list and outliers are recorded on the forms included as part of this narrative.

### 4. BLANKS

The lab ran a matrix method blank for each day the VOST cartridges were analyzed. Cartridges used for daily methods blanks were not from the same batch or sampling media. Each of the blanks was labeled as "Lab Blank". All of the blanks had no TCLs or TICs present. Because the lab did not include any sort of identification for the blanks, it would be impossible to determine which samples are associated with which blank.

### 5. SYSTEM MONITORING COMPOUND AND SURROGATE RECOVERY

The volatile system monitoring compounds were within QC required limits for recovery and retention time; with the exception of:

The recovery of 1,2-Dichloroethane-d4 was out of control high in samples 11316 and 11313.

Therefore all positive results in samples 11316 and 11313

SDG: 9910471

are qualified "J" estimated.

6. MATRIX SPIKE/MATRIX SPIKE DUPLICATE

Due to the nature of the VOST cartridge matrix it is impossible to perform spiking on the samples. The method requires a batch certification of the VOST cartridges prior to use. The lab did not provide evidence that the pre-certification was performed. All results could be considered suspect due to possible reduced capacity or retention of the VOST media.

7. FIELD BLANK AND FIELD DUPLICATE

The samples did not provide a field blank with this SDG. Due the collection method a field duplicate can not be collected.

8. INTERNAL STANDARDS

The internal standards retention times and area counts for the VOA fraction were all within the required QC limits: with the exception of 1,4-Dichlorobenzene in a lab blank, therefore for that lab blank all positive results are qualified "J" and no-detects are qualified "UJ".

9. COMPOUND IDENTIFICATION

Target compounds (TCLs) and Tentatively Identified Compounds (TICs) were identified using a "best fit" library search method.

10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

All target compound quantitation was properly reported.

11. SYSTEM PERFORMANCE

GC/MS baseline indicated acceptable performance.

12. ADDITIONAL INFORMATION

Method modifications which could adversely affect data quality:

NARRATIVE

Page 4 of 8

Laboratory: Air Toxics Ltd  
Site: Himco Dump (IN)

Case:  
SDG: 9910471

1. "Cartridges used for daily method blank may or may not be from the same batch or sampling media" as the analyzed samples.
2. "Sampling media provided by the client is batch certified ahead of time, only if client provides blank cartridges"

The lab failed to provide copies of the manual data manipulations preformed in this data set. The reviewer is unable to determine what effect those actions have on the overall quality of the data.

We have reviewed the data for the following case:

SITE NAME: HIMCO DUMP

CASE NUMBER: N/A SDG NUMBER: 9910332

Number and Type of Samples: Eight (8) VOST Cartgidges

Sample Numbers: 11011, 11024, 11016, 11109, 11023, 11017, 11013 and 11110

Laboratory: Compuchem Hrs. for Review: 15

Following are our findings:

*The data are usable and acceptable with the qualifications described in the attached narrative.

Site: Himco Dump (IN)

Case:  
SDG: 9910332

Below is a summary of the out-of-control audits and possible effects on the data for this Case/SDG:

Eight VOST Cartridges, numbered 11011, 11024, 11016, 11109, 11023, 11017, 11013, and 11110, were collected on October 22, 1999. The lab received the samples on October 23, 1999 in good condition. All samples were analyzed for volatile organic analytes. All were analyzed according to modified SW846 8260.

The VOST analyses were performed within the technical holding times of 14 days after sample collection; therefore the results are acceptable.

## NARRATIVE

Page 4 of 5

Laboratory: Air Toxics Ltd  
Site: Himco Dump (IN)

Case:  
SDG: 9910332

### 1. HOLDING TIME

Eight VOST Cartridges, numbered 11011, 11024, 11016, 11109, 11023, 11017, 11013, and 11110, were collected on October 22, 1999. The lab received the samples on October 23, 1999 in good condition. All samples were analyzed for volatile organic analytes. All were analyzed according to modified SW846 8260.

The VOST analyses were performed within the technical holding times of 14 days after sample collection; therefore the results are acceptable.

### 2. GC/MS TUNING AND GC INSTRUMENT PERFORMANCE

All GC/MS tuning complied with mass list and ion abundance criteria for BFB, and all samples were analyzed within the twelve (12) hour periods for instrument performance checks.

### 3. CALIBRATION

Initial and continuing calibrations of the Volatile, standards were evaluated for target compound list and outliers are recorded on the forms included as part of this narrative.

### 4. BLANKS

The lab ran a Method Blank for the VOST cartridges analyzed. The Blank was labeled as "Lab Blank". The blank did not report any detectable TCLs or TICs. Therefore, the Method Blank results are acceptable.

### 5. SYSTEM MONITORING COMPOUND AND SURROGATE RECOVERY

The volatile system monitoring compounds were within QC required limits for recovery and retention time. Therefore, the results are acceptable.

### 6. MATRIX SPIKE/MATRIX SPIKE DUPLICATE

Due to the nature of the VOST cartridge matrix it is impossible to perform spiking on the samples. The method requires a batch certification of the VOST cartridges prior to

Case:  
SDG: 9910332

use. The lab did not provide evidence that the pre-certification was performed. However, the lab performed an analysis on a LCS sample and all spiked analytes were within the QC limits.

7. FIELD BLANK AND FIELD DUPLICATE

The samples did not provide a field blank with this SDG. Due the collection method a field duplicate can not be collected

8. INTERNAL STANDARDS

The internal standards retention times and area counts for the VOA fraction were all within the required QC limits. Therefore, the results are acceptable.

9. COMPOUND IDENTIFICATION

Target compounds (TCLs) and Tentatively Identified Compounds (TICs) were identified using a "best fit" library search method.

10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

All target compound quantitation for total ng were properly reported.

11. SYSTEM PERFORMANCE

GC/MS baseline indicated acceptable performance.

12. ADDITIONAL INFORMATION

The lab failed to provide copies of the manual data manipulations performed in this data set. The reviewer is unable to determine what effect those actions have on the overall quality of the data.

J/R = All positive results are estimated "J" and non-detected results are unusable "R"

- \* = These flags should be applied to the analytes on the sample data sheets.
- # = Minimum Relative Response Factor

## ORGANIC DATA QUALIFIER DEFINITIONS

For the purpose of defining the flagging nomenclature used in this document, the following code letters and associated definitions are provided:

VALUE - when/if the result of a value is greater than or equal to the Contract Required Quantitation Limit (CRQL).

- U Indicates that the compound was analyzed for, but not detected. The sample quantitation limit corrected for dilution and percent moisture is reported.
- J Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of a compound where the result is less than the sample quantitation limit, but greater than zero. The flag is also used to indicate a reported result having an associated QC problem.
- R Indicates the data are unusable. (NOTE: The analyte may or may not be present.)
- N Indicates presumptive evidence of a compound. This flag is only used for a tentatively identified compound, where the identification is based on a mass spectral library search.
- P Indicates a pesticide/Aroclor target analyte when there is greater than 25% difference for the detected concentrations between the two GC columns. The lower of the two results is reported.
- C Indicates pesticide results that have been confirmed by GC/MS.
- B Indicates the analyte is detected in the associated blank as well as in the sample.
- E Indicates compounds whose concentrations exceed the calibration range of the instrument.
- D Indicates an identified compound in an analysis has been diluted. This flag alerts the data user to any differences between the concentrations reported in the two analysis.
- A Indicates tentatively identified compounds that are suspected to be aldol condensation products.
- G Indicates the TCLP Matrix Spike Recovery was greater than the upper limit of the analytical method.
- L Indicates the TCLP Matrix Spike Recovery was less than the lower limit of the analytical method.
- T Indicates the analyte is found in the associated TCLP extraction blank as well as in the sample.

X,Y,Z are reserved for laboratory defined flags.

## TENTATIVELY IDENTIFIED COMPOUNDS - Top 10 Reported

| Compound                                 | CAS Number | Match Quality | Amount (nG) |
|--|------------|---------------|-------------|
| Ethane, 1,1,1,2-tetrafluoro-             | 811-97-2   | 59 %          | 280         |
| Methane, dichlorodifluoro-               | 75-71-8    | 83 %          | 22000       |
| Ethane, 1,2-dichloro-1,1,2,2-tetrafluoro | 76-14-2    | 90 %          | 29000       |
| Pentane                                  | 109-66-0   | 47 %          | 59          |
| Ethane, 1,2-dichloro-1,1,2-trifluoro-    | 354-23-4   | 91 %          | 390         |
| Ethane, 1,1,2-trichloro-1,2,2-trifluoro- | 76-13-1    | 64 %          | 230         |
| Pentane, 2,3,3-trimethyl-                | 560-21-4   | 90 %          | 35          |
| Benzene, (1-methylethyl)-                | 98-82-8    | 91 %          | 330         |
| Decane                                   | 124-18-5   | 93 %          | 160         |
| Hexane, 3-methyl-                        | 589-34-4   | 53 %          | 83          |

Methane, dichlorodifluoro- and Ethane, 1,2-dichloro-1,1,2,2-tetrafluoro were saturated; data reported as estimated.

E = Exceeds instrument calibration range.

Q = Exceeds Quality Control limits.

S = Saturated peak; data reported as estimated.

Container Type: VOST Tube

| Surrogates            | % Recovery | Method Limits |
|-----------------------|------------|---------------|
| Dibromofluoromethane  | 95         | 72-135        |
| 1,2-Dichloroethane-d4 | 86         | 69-137        |
| Toluene-d8            | 221 Q      | 77-124        |
| 4-Bromofluorobenzene  | 54 Q       | 70-133        |

**TENTATIVELY IDENTIFIED COMPOUNDS - Top 10 Reported**

| Compound                                 | CAS Number | Match Quality | Amount (nG) |
|--|------------|---------------|-------------|
| Ethene, chlorotrifluoro-                 | 79-38-9    | 94 %          | 74          |
| Methane, dichlorodifluoro-               | 75-71-8    | 91 %          | 7700        |
| Ethane, 1,2-dichloro-1,1,2,2-tetrafluoro | 76-14-2    | 90 %          | 9000        |
| Ethane, 1,2,2-trichloro-1,1-difluoro-    | 354-21-2   | 9 %           | 130         |
| Unknown                                  | NA         | NA            | 62          |
| Ethane, 1,2-dichloro-1,1,2-trifluoro-    | 354-23-4   | 91 %          | 270         |
| Ethane, 1,1,2-trichloro-1,2,2-trifluoro- | 76-13-1    | 72 %          | 340         |
| Hexanal                                  | 66-25-1    | 90 %          | 82          |
| Octanal                                  | 124-13-0   | 78 %          | 80          |
| Nonanal                                  | 124-19-6   | 78 %          | 69          |

Methane, dichlorodifluoro- and Ethane, 1,2-dichloro-1,1,2,2-tetrafluoro were saturated; data reported as estimated.

E = Exceeds instrument calibration range.

S = Saturated peak; data reported as estimated.

Container Type: VOST Tube
